PSYCHOLOGICAL STRATEGY BOARD  
WASHINGTON 25, D.C.

DRAFT

PSB D-19

January 5, 1952

INVENTORY OF RESOURCES PRESENTLY AVAILABLE FOR  
PSYCHOLOGICAL OPERATIONS' PLANNING

This document was prepared by a panel under the supervision of the staff of the Psychological Strategy Board. It is not a board-approved document, but is available on request for distribution to departments charged with the conduct of psychological operations, for use as a planning checklist. (Reference: Minutes, Seventh Meeting of the Psychological Strategy Board, December 20, 1951).

SECURITY INFORMATION

INVENTORY OF RESOURCES PRESENTLY AVAILABLE FOR PSYCHOLOGICAL OPERATIONS' PLANNING

SECTION I

INTRODUCTORY STATEMENT

PURPOSE

1. This is intended to be a catalogue of the techniques and means of power presently available for the psychological support of U. S. national security objectives. It should be regarded as basic reference information, designed with the thought in mind that its users may not all be specialists experienced in psychological operations.
2. The purposes of this "Inventory of Psychological Operations Resources" are:
  - (a). To provide a check list of sources available for research and development in fields of endeavor applicable to psychological operation's planning and programming;
  - (b). To provide a compilation of agencies to be used as a guide to available media for the implementation of psychological plans and policies;
  - (c). To provide material for a preliminary survey report of present U.S. psychological operations.
3. This inventory is not intended as an appraisal of the adequacy of existing programs, or as a vehicle for policy recommendations. It does not include an assessment of the facilities available in the cold war in terms either of their relative importance in a particular situation or of the application of techniques to specific targets or objectives.
4. The circumstances of use of the resources included here -- the integration of the instrument per se into a strategy of action -- will determine the role which psychological forces can play in support of national objectives. This can be measured in the last analysis only in

I - 1

SECURITY INFORMATION

CONFIDENTIAL

CONFIDENTIAL

SECURITY INFORMATION

terms of plans, which represent the systematic harnessing of selected ideas to instrumentalities within the framework of established organization.

5. A separate PSB study will be devoted to an inventory of existing policies and plans. In addition, it is contemplated that PSB will develop and issue for the guidance of departments and agencies a series of staff memoranda analyzing inventoried techniques and establishing doctrines for their application.

SCOPE

1. Production of an inventory of these resources at the disposal of the U.S. Government for the purposes of psychological strategy requires, at the start, an attempt to define terms and clearly establish intentions. This is especially necessary in view of the scope of such strategy, and the varying views of its missions and methods.

2. It is assumed that we are concerned with the instruments at our disposal for affecting in our favor the minds, attitudes and relevant actions of foreign peoples, of individuals, groups, and governments. In listing these instruments, two considerations create difficulty. One is that few aspects of American life or government are devoid of potential psychological significance for foreign audiences. The other is that the nature of relevant action responses abroad to an aspect of the U.S. may vary in terms of individuals, groups, or situations. Although anything may be made a "weapon", its "target" depends on the given situation. Hence it becomes necessary to impose certain restrictions on the scope of this inventory.

3. For example, our national instruments for the exercise of direct force, direct negotiation, or direct manipulation are governed primarily by their own functions. But all three forms of action are intimately related to the use and success of psychological strategy, and much psychological leverage depends upon, or is a by-product of, their existence and calculated application.

I - 2

SECURITY INFORMATION

CONFIDENTIAL

CONFIDENTIAL

Security Information

4. It will be necessary to preserve the distinction between such sources of psychological effects, and the instruments for manipulating these effects. Otherwise we foster the fallacy that psychological strategy determines, rather than supports, the totality of U.S. policies and actions. The elements of any U.S. agency responsible for dealing with the psychological implications of the agency's activity are considered instruments for the purpose of this inventory. Any agency within or apart from the Government whose activities might have psychological effects should also be considered in this light.

(a). For instance, U.S. atomic production capacity is clearly a major component in the shaping of psychological responses abroad to U.S. policy. Thus psychological considerations might at some time play a part in U.S. atomic energy policies, and the psychological implications of atomic energy could be properly exploited.

(b). The U.S. standard of living is a major and constant conditioning factor in the minds of peoples abroad. It cannot be in any important degree concealed, or raised or lowered in accordance with our purposes. Presumably, given a decision either to maximize or to minimize the material rewards of a free society, the resources enumerated in this inventory could be selectively utilized for that task. In short, the U.S. standard of living is a fact or a concept, not an instrument. It can be exploited but not manipulated; it is therefore excluded from this list.

ORGANIZATION

1. An inventory of instruments for psychological operations falls basically into two categories:

I - 3

Security Information  
CONFIDENTIAL

CONFIDENTIAL

SECURITY INFORMATION

- (a). Agencies available for planning and programming of psychological operations including private individuals and organizations with a store of accumulated knowledge and experience directly related to various facets of psychological operations.
- (b). Instruments for utilization in the transmission or dissemination of psychological programs, actions or materials, including organizations, persons, media, and devices available as carriers of psychological operations techniques.

2. Within these two general categories, virtually all psychological plans and operations can be undertaken. No survey would, however, be complete unless an attempt were made to provide at least a preliminary listing of the specific programs, techniques, and actions that are available to psychological planners and operators. To prepare an exhaustive listing of this type, however, would involve an attempt to categorize the psychological ramifications of the totality of U.S. power, and would moreover involve itemization of actions whose psychological effect is only secondary to another primary objective.

3. Finally, in order that any listing of such actions avoid the suggestion that psychological operations are intended to form rather than serve policy, no actions have been listed that do not fall within existing U.S. policy. The following inventory is therefore divided into three parts:

- (a). Agencies for Planning and Programming (Section III/II);
- (b). Instruments for Transmission and Dissemination (Section IV/III);
- (c). Fields of Endeavor (Section V/IV).

INTRODUCTION

(Section III/II\*) page 1

This listing includes established offices within the U.S. Government and organizations outside the Government, which might be of use in programming psychological operations. It is not intended to suggest specific programs, nor to presume that each of the offices listed should be brought into psychological operations' program planning. However, individuals engaged in specific projects may find in this list points of reference for enlarging and/or enhancing their proposals. This can serve as a guide; it is by no means necessarily to be followed.

INTRODUCTION

(Section IV/III\*)

As in the previous section, psychological operations' programmers are herewith provided a checklist of available means of transmission. The Government officers listed and the non-Governmental organizations included, are itemized solely for guidance purposes. This is not to say that any one of them must, or even should be used as a means of communication, but they suggest themselves as "being available" should specific psychological operations' projects call for their use. Again, this listing should not be taken as a pattern or as recommendations; it is simply an amalgamation of available resources which may be of use, at some time, in psychological operations.

Notes

1. The foregoing comprises a selection of perhaps 90% of the available resources in the two categories covered by this inventory. Obviously a complete listing of every possible and/or potential organization group, committee or individual would take many months and fill a volume many times this size. An effort has been made, however, to comb through the bulk of source material available and to come up with a reasonably complete and at least representative cross-section of the resources at hand. .

2. With respect to foundations, institutions and private business firms, as well as with public-interest groups such as councils, committee, etc., it should be noted that Government relations with such agencies are subject to the utmost diplomacy and security clearances. All of them are extremely jealous and proud of their freedom from Government influence. Should any of these agencies be applicable to Government operations the most tactful approach will be required to achieve any reasonable degree of cooperation. Various subdivisions of the State Department, such as External Research, Public Affairs and Public Liaison, are experienced in this field and their advice would be profitable.

3. The occurrence in this inventory of organizational titles indicating an agency's primary endeavor in youth activities, religion, education, etc. requires a special note. Such specialized agencies as these are especially wary of being subjected to government influence. Their sensitivity should be borne in mind in conducting negotiations with them.

INTRODUCTION

(Section V/IV\*)

This section comprises categories of existing political, economic, military and propaganda programs. Each of the subsections represents a field of endeavor such as an industry, a profession, a category of social institutions, or a socio-technical function (such as communications). Each subsection includes first a brief statement of the significance of the field and then a breakdown into a listing of some of the established programs within the field, the agency presently responsible for the program, and the action-effect the program is designed to achieve.

\*Section V is now Section IV

A - AGRICULTURE

1. Psychological Significance of the Field.

Agriculture, as a basic industry of practically every country, has a two-fold place in cold war activities. In the sphere of economic warfare, it is a primary target for various forms of attack; the importance of agriculture in the aims of psychological warfare lies in the fact that it provides a livelihood for large and homogenous sections of each country's population and presents unique opportunities for penetration by white, grey, and black propaganda. Strengthening the agricultural economies of non-Communist nations is essential to the creation of positions of strength in the military, economic, and political fields. The potential of agriculture as a field for cold war operations is considerable, therefore, from the standpoint of both economic and psychological warfare.

2. Programs or categories; primary agency responsibility; action capabilities:

<u>Program:</u>	<u>Responsibility</u>	<u>Objective</u>
(1) Land Reform	Inter-Agency UNESCO	Raise the standard of living of peasantry and improve their relationship to the land they cultivate.
(2) Technical Assistance Program (Point IV)	State Department, Department of Agriculture	Economic development of backward areas; improvement of living conditions and stability; increase of trade and the availability of strategic commodities.
(a) Food improvement program; improvement projects for various crops.

B - CULTURE

1. Psychological Significance of the Field.

a. A civilization's culture, at any stage of its existence, is its total achievement, individually and collectively, in the fields of intellectual and aesthetic effort usually referred to generically as the seven lively arts. It may include others, more in the nature of "mores" or "standards", but for this discussion the "arts" will suffice. Culture itself is intangible and cannot be measured by precise units or pre-determined standards. However, its manifestations such as works of art, pieces of literature, declarations of drama and compositions of music, may be reduced to tangible form and thus may be evaluated. Since these manifestations are generally created for public consumption, they are capable of impressing the consumers - even if the normal reaction is so simple as "like" or "dislike". However, in a vast majority of instances, an impression carries with it an idea; consequently cultural manifestations may well be considered vehicles for specifically designed impressions - in short, propaganda.

b. Considered as a whole, culture is a slow-moving, constantly developing force in any society - much like a river of volcanic lava inching down a mountain-side. In individuals of middle-age a nation's culture is deep-rooted, wedged almost immovably into their character. It is thus one of the final elements to be purged from the individual by a totalitarian government. Conversely, such a regime's own propaganda may be infiltrated into the society through designed cultural manifestations directed purposefully to younger members of that society whose intellect and aesthetic sensitivity are in a developmental stage.

d. The field of cultural manifestations thus is open to any force - individual or mass - desiring to create an impression. "Psychological operations" may be applied to the field as easily as any philosophy or

V - 4

SECURITY INFORMATION

~~CONFIDENTIAL~~  
 SECURITY INFORMATION

any political concept. An effort must be made, however, to appeal to both parts of the "target-society" - those who are steeped in tradition, and those others whose only impressions have been created by the "target elite".

2. Programs for Exploitation of the Field:

<u>Program</u>	<u>Responsibility</u>	<u>Objective</u>
a. USIS activities, specifically providing travelling art exhibits, photo exhibits, books, etc.	State Department	Serving the U.S. aim of keeping foreign populations informed and abreast of developments in American art.
b. VOA musical programs, dramatic adaptations and special cultural-event coverage.	State Department	Create or hold an impression that the U.S. is devoted to and practices these art forms.
c. USIE project involving an exchange between this country and others of artists, writers, photographers, sculptors, small dramatic groups, ballet companies and choral groups.	State Department	To demonstrate the extent of U.S. development in these art forms, and to provide the "personal touch" for considerably more propaganda effect than inanimate exhibits and radio broadcasts.
d. Commercial motion pictures selected for their quality and "point", to be distributed abroad through normal channels (selection to avoid "The Desert Fox"; distribution to be "encouraged" by U.S.).	State Department	To develop a sense of appreciation among foreign audiences for American motion picture techniques and dramatic capabilities.
e. Documentary films, portraying various facets of American life especially those indicating U.S. advancement in spheres such as race relations, education, flood control, highway improvement, industrial design, architecture, etc.	State Department TCA	To bring well-planned and well-executed graphic descriptions of American culture and social achievement to foreign peoples.
f. Commercial radio programs selected for their reflection of 20th century American culture to be produced	State Department	Again to provide a "real touch" for audiences who have heard about our radio culture but have

**CONFIDENTIAL**  
SECURITY INFORMATION

C - ECONOMIC WARFARE

. Psychological Significance of the Field:

a. Economic Warfare has been a weapon of national policy since at least the time of the Roman Empire. During the past 100 years it has come to be especially significant and probably reached its greatest stature during World War II. However, it is the view of some experts in the field that traditional economic warfare is less effective against a relatively integrated and self-sufficient economy as is the Soviet Bloc than it was against Italy, Germany, and Japan during WW II. The potentiality of economic warfare remains and therefore it may become necessary to develop new and unorthodox techniques to use this weapon most effectively.

b. Today, vast improvements in the techniques of international economics have complicated the field, but at the same time have opened it to perhaps less obvious means of exploitation. International unionization, advertising, public relations and communications should be considered now as additional avenues of approach in economic warfare. As private enterprise, these may well go beyond the post-war international trade and economic agencies developed bilaterally and sponsored by U.S.

D - EDUCATION

1. Psychological Significance of the Field.

All action in support of foreign policy is designed ultimately to influence the state and content of mind of peoples so as to weaken the adversary and strengthen support of the nation in pursuit of its objectives. Education, which is defined as the discipline of mind or character through study or instruction, is a fundamental instrument for influencing the state and content of people's minds.

The objectives of the U.S. and the free world are: (1) To reduce the influence of the Kremlin Regime, both nationally and internationally; and (2) to bring about a comity of nations. It is incumbent, therefore, upon the U.S. and the other free nations to educate the individuals of the USSR and satellites in accordance with such objectives.

2. Programs or categories; primary agency responsibility; action capabilities.

- |    |                                      |       |  |
|----|--------------------------------------|-------|--|
| a. | (1) USIE                             | State | Promote a better understanding of the US in other countries, and secure mutual understanding between people of US and other countries. |
|    | (2) Student Exchange (Fulbright Act) | State | In respect for US institutions and learning.   |
|    | (3) UNESCO                           |       | Remove national barriers and provide interchange of educational ideas and methods.   |
|    | (4) American Council of Education    | State | Orient foreign visitors to promote friendship and understanding.   |
|    | (5) World Literacy Movement          |       | Eliminate illiteracy.  |

E - ENTERTAINMENT

1. Psychological Significance of the Field.

Propaganda efforts are wasted unless they reach an audience; one way to acquire an audience is to provide entertainment. Entertainment, as a whole, covers many art forms and, therefore, reaches audiences of wide varieties of tastes. Entertainment (music, drama, literature, sports, such as the Olympic Games, etc.) surmounts racial and national barriers, so its applicability is universal. Entertainment can deliver its impact on non-communists and neutrals, as well the Communist Bloc.

2. Programs or categories; primary agency responsibility; action capabilities:

<u>Program</u>	<u>Responsibility</u>	<u>Objective</u>
(1) Approximately 150 reels of motion picture film covering approximately 75 subjects, at least half to be produced abroad in such countries as Iran, Turkey, Greece, Egypt, Italy, France, Philippines, Thailand, Malaya, and New Delhi.	State Department	(1) Expose Communist tactics and develop psychological and military resistance thereto. (2) Show the positive alternatives to Communism. (3) Show that the national objectives of the free world coincide with US objectives. (4) Point out the need for solving international problems through international action.
(2) Traveling Theater Groups, opera, musicals, etc.		(1) Promote US ideas and ideals.
(3) Traveling athletic groups, baseball, hockey, tennis, golf, etc.		(1) Further international fraternization. (2) Present opportunities for exchange of ideas.

G - LABOR

In the Communist arsenal of weapons, there is none so important as the use they make of the trade union and labor movements to further their ends in non-Communist countries. Penetration, infiltration and the seizure of control of trade unions, especially those in the strategic industries, such as coal, communications, transport, maritime, steel and engineering trades, and government service, represent the fundamental precept of Marxist, Leninist and Stalinist revolutionary strategy. Since Lenin's time, the trade union represents the major medium through which the Communists work.

The technique of establishing Communist control has been reduced to a science. The effort and energy expended on the trade union front, the training of specialists for this work, and the central direction of Communist activities in the trade unions from Moscow represent not just another front on which they operate but a major and decisive front. There are four reasons for this concentration on the trade union movement.

- a. It gives them an economic stranglehold on a country, which they use in two ways: strikes to hurt production; wage demands to encourage inflation.
- b. It gives them direct control over masses and enables them to paralyze a country in times of insurrection and rebellion.
- c. It enables them to foster class hatred and national disunity.
- d. It gives them the means of sabotage and espionage.

The Communists are now the dominant group in the trade union movements of France, Italy and Indonesia. They have powerful groups established in the trade union movements of Japan and India. They have a substantial, if less dangerous measure of control, in Finland, and in most of the primitive unions in Central and South America, Africa and

V - 18

Security Information

the Middle East. Their most serious threat, however, is in the first five countries named, i.e., Italy, France, Indonesia, Japan and India.

To dislodge and destroy Communist control of the trade unions must be a major objective of American policy. To achieve this, the main responsibility falls, in the first instance, on the governments of the respective countries. The social and economic policies which they follow have an important bearing on the strength of Communist influence, for by eliminating unemployment, improving wage and social legislation, equalizing the distribution of wealth, etc., etc., these governments can deprive the Communists of the basis of their mass appeal. But beyond this, only these governments have the power to take steps to strengthen the bona fide trade union elements, and to weaken the Communists where they exercise control.

Another powerful force ranged against Communist control of the trade unions is the International Confederation of Free Trade Unions created by the bona fide trade unions of the world, including the AFL, CIO, the British TUC, etc. This body, with the regional organizations which it is now developing, is the main counter-weight to the Communist-controlled World Federation of Trade Unions. Associated with the ICFTU are the International Transportworkers Federation, the International Metal Trades Federation, the International Clothing Workers Federation, and a half dozen other international organizations created by bona fide trade unions in particular industries.

In the United States, the AFL and its associated Free Trade Union Committee have since 1945 supported bona fide trade union elements in various countries in their efforts to rid the trade union movement of Communist control. They maintain representatives in Germany, Europe, Indonesia, India and Japan for this work. But they are hard pressed for funds and have great difficulty expanding their activities. The CIO, since its break with the WFTU, has also been fighting Communism

in the international field and has one representative for Europe and one in Italy.

The encouragement of free trade unions throughout the world represents a basic policy of the U.S. government. The Mutual Security Law, just passed, specifically lays this down as legislative policy as well. The State Department maintains labor advisors in Washington and has a corps of about 30 labor attaches in the field. ECA has a Labor Division in Washington and labor advisors in nearly all their missions. The Labor Information Service of the ECA and the one now developing under the USIE have as their objective the trade union field.

A measure of cooperation and participation exists between the free labor unions and the Government in order to further the twin objectives of fighting Communism in the international trade union field and developing strong bona fide trade unions. There is, however, a great deal more that can be done in this field both by the Government and by the unions working separately and in concert. Similarly the influence of this Government can be brought to bear on certain other Governments to induce them to follow policies designed to strengthen bona fide labor movements.

H - MILITARY

1. Psychological Significance of the Field.

Military potential and capacity is the psysical element of power in the development of a position of strength; the buttress of foreign policy. The immediate object of foreign policy is national security; the long-range object is world peace.

Rearmament, an advancement to a sound military posture, and economic stability and progress, are essential guarantees of peace. The United States and its allies accept these fundamental postulates. The drive by the Soviet Regime toward a power position of dominance requires an immediate and vigorous counter response by the free world. The pre-eminence of military strength must, therefore, be reflected within all other fields of endeavor. Western world rearmament is to avert war, not precipitate it, and, secondarily, to wage war successfully if the primary objective is not achieved.

2. Programs or Categories; Primary Agency Responsibility; Action

Capabilities

I - POLITICAL ACTION GROUPS

1. Psychological Significance of the Field

The activities of some of the political action groups listed below are appropriate for application to other democracies. Some of the groups are already operating, or could operate, in a still wider variety of countries, including non-democracies. The political action group, as a medium, therefore, has widespread potentialities.

Political action groups invoke a response proportional to the financial support received and to the efficiency and personal connections of their staffs.

Their targets are primarily:

- a. legislative and administrative organs
- b. special groups
- c. the general public

They have an impact upon non-Communists and neutrals outside the Soviet bloc, and by radio and otherwise upon the populations of the satellites, and possibly of the USSR.

Political action groups probably possess as high an effectiveness as any other medium of propaganda and influence. In fact, they may be utilized as agents for every form of propaganda and activist work. The use of political action groups is therefore absolutely essential to the advancement of the interests of the United States and its allies in the cold war.

2. Overt Elements

- a. Current (Type examples only)

(1) Groups organized primarily to promote an international program

V - 24

Security Information

~~CONFIDENTIAL~~

**CONFIDENTIAL**

(a) Atlantic Union Committee, Inc.

The lobbying group of Federal Union, Inc. to secure Congressional action in behalf of a federal union (political, military, economic) of the democracies of America, the British Commonwealth, and Western Europe.

(b) Federal Union, Inc.

Promotion among the general public of the idea of a political union of all the western-type democracies.

(c) Committee on the Present Danger

Promotion of legislation favoring US policies abroad, such as the Mutual Aid Pact

(d) National Council for the Prevention of War

Promotion of such US policies as ECA, the mutual assistance program, the educational exchange, aid to the expellees.

(e) The European Movement

Promotion of the idea of a United Europe, largely among Europeans.

(f) United World Federalists, Inc.

Promotion of measures to strengthen the United Nations, and to further US participation in the UN

(g) World Federation of United Nations Associations

Promotion of the idea of international action through the medium of the United Nations.

(2) Groups promoting an international program, as a byproduct of other activities which are primary.

(a) General organizations

A. Americans for Democratic Action

Promotion of anti-communist international policies of the United States, and cooperation with the democracies of the world in the UN

Section V

J - PROFESSIONAL GROUPS

1. Psychological Significance of the Field

Professions have an inherently international character. Many times the professional philosophy is so strong or its personal and humanitarian aspects so compelling that a righteous course of action influences events irrespective of ideological or sociological conditions and circumstances. There exists within the professions a certain respect for ethical practices and common aims which can often be the vehicle for generating responses in accord with free world making beneficial courses of action or concepts which inspire respect, and therefore, for comparisons with oppressive or restrictive measures in Communist areas. This comparison of professional programs, patterns, and methodology is a psychological instrument. The availability or denial of new techniques or data of utility to professional groups could be a lever for electing the support of a suppressed professional group. The professional groups comprise an important element of the intelligentsia, and their pliability and utility as a psychological tool is quite evident.

2. The professions of law, medicine, and journalism are the foremost professional groups with widespread affiliations useful for the objectives of psychological strategy.

a. Legal

In the whole field of basic human rights and the legal protection of those rights, the Soviet system is obviously heavily vulnerable to attack by the legal profession.

How the Soviet system has systematically destroyed those rights and made a travesty of law and justice in all

V - 29

Security Information

~~CONFIDENTIAL~~  
SECRET

~~CONFIDENTIAL~~  
Security Information

countries brought under Soviet domination can be  
forcibly demonstrated with almost endless examples.

Coerced courts and constitutions  
State theft of property  
Official kidnapping  
Sudden mass deportations  
Slave labor camps  
Mock, prejudged trials  
Physical abuse of both witnesses and accused.  
"Shotgun" balloting  
Secret process  
Defiance of International Law

The legal profession can set before the average citizen a shocking  
factual picture of what is happening under the Soviet system and  
what could happen to him if he allowed himself to fall under such a  
system. This type of information - the big truth VS the big lie - can  
be disseminated and used both overtly and covertly.

Some of the major influential legal organizations in the Western  
world are:

- (1) American Bar Association, and other comparable  
national associations.
- (2) International League for Rights of Man  
75 Seventh Ave., N. Y.
- (3) International Association of Democratic Lawyers  
19 Quai Bourbon, Paris
- (4) International Bar Association  
501 Fifth Avenue, N.Y.
- (5) International Arbitration League  
53 Victoria Street, London
- (6) International Court of Justice of the UN

b. Medical

In some cases directly and in others indirectly, the  
medical profession of the so-called free world can  
engage in the "cold war" through such measures and  
actions as:

V - 30

Security Information

~~CONFIDENTIAL~~

~~CONFIDENTIAL~~  
SECRET  
Security Information

(1) Demonstrating that Western Europe and the USA have higher standards of health and medicine than in Russia and the satellite orbit. (Life is healthier, longer in the free world).

(2) Pointing out that the benefits of the many new "wonder" drugs and curatives developed by the West are denied to Soviet-controlled populations by the "Iron Curtain". (The Soviet "Iron Curtain" keeps you crippled or dooms your child).

(3) Urging, on humanitarian grounds, the exchange of physicians and surgeons, and medical ideas, between the West and the Iron Curtain countries.

(4) Stressing that organized medical counter-measures and life saving techniques available to the West can greatly reduce civilian casualties in the West. (Total war on civilian population is by no means total).

(5) Condemning the Soviet Slave camp program, with its natural temptation, if not actual practice, to engage in medical experimentation on inmates in the Nazi pattern.

(6) Pointing out the vastly superior medical protection of the Western soldier, especially in Korea.  
(a) Our wounded live to fight again. (b) What chance has a wounded North Korean or Chinese? (c) Are the Soviets using totally inadequate medical means in Korea because they wish to carry out experimental observations and measures on North Korean and Chinese casualties? Why do so many die? With famine facing China, is it true Soviet medical advisors have been instructed to be indifferent to the conservation of Chinese manpower in Korea? (d) Where is Russian blood plasma for the wounded Chinese, etc.? (e) If Korea is an example, what medical chance has the Satellite Czech, Polish and Hungarian soldier?).

Influential medical and health organizations actively operating today:

- (1) World Health Organization, UNESCO
- (2) National Medical Associations
- (3) World Medical Association  
2 East 103 St., N.Y.

(Includes U.S.A., Great Britain, Australia, Canada, and a number of European Associations)

c. Journalism

Typical examples of the range and complexity of journalistic involvement in the "cold war" are:

(1) The international news services -- with AP and UP as examples of those which operate independently of governmental control - with Reuters as an example of one which is definitely influenced by governmental policies - with Tass as an example of one completely under governmental control for propaganda purposes.

(2) The many national news agencies operating in other countries for propaganda purposes, such as the Greek Communist agency, "Maritpress", in England.

(3) The United States press presents such extremes as the so-called "isolationist" Hearst interests, the independent "New York Times" and the Communist Party Organization, "The Daily Worker".

(4) The great metropolitan newspapers and press organizations in the free world which are controlled organs of political parties, such as the Communist "L'Humanite" in France, and the Social Democratic, "Die Telegraf", and the Christian Democratic, "Der Tag", in Germany.

(5) The political propaganda newspaper, printed in many languages and having world wide distribution, such as the weekly Cominform paper, published in Bucharest.

(6) The large, dominant Communist party newspapers in Russia and satellite countries, such as "Pravda" in Russia, "Rude Pravo" in Czechoslovakia and "Szbad Nep" in Hungary.

(7) Press control or suppressive measures recently taken by countries in the "outside" world, such as the "La Prensa" rape in Argentina and the increasing press censorship controls of Nehru.

(8) The entire multi-lingual emigre and refugee press, both in the United States and throughout the world.

(9) The specialized newspaper with a definite propaganda objective, such as the Communist agrarian publication in France, "La Terre".

(10) Press organizations used as political fronts, such as the Communist controlled "International Organization of Journalists".

(11) National journalist unions, such as the "British National Union of Journalists (NUS)."

K. - RELIGION

1. Psychological Significance of the Field

The potentialities of religion as an instrumentality for combatting Communism are universally tremendous. Religion is an established basic force which calls forth men's strongest emotions. Because of the immoral and un-Christian nature of Communism and its avowed opposition to and persecution of religions, most of the world's principal religious organizations are already allied with the cause of the free nations. Our over-all objective in seeking the use of religion as a cold war instrument should be the furtherance of world spiritual health; for the Communist threat could not exist in a spiritually healthy world.

That the USSR is vulnerable with respect to its position in opposition to religion was demonstrated during World War II, when the Kremlin attempted to re-establish some degree of religious freedom in order to gain the support of the people under the national stress of war. Current information from the Iron Curtain countries testifies to the effectiveness of even sporadic and unorganized religious opposition to the Communist regimes.

2. Programs or Categories; Primary Agency Responsibility; Action Capabilities.

a. <u>Programs or Categories</u>	<u>Responsibility</u>	<u>Action Capabilities</u>
(1) USIE VOA	State	To publicize through all available media, the Communist threat to religions and the freedom of man
(2) Religious Advisory Panel	State	To provide religious support and policy guidance to the State Department's information activities.

I. - SCIENCE

1. Psychological Significance of the Field

The exploitation of the sciences constitutes a major element in the prosecution of the cold war, as well as a major element of the preparation for and waging of the hot war by both the U.S. and the Communist Bloc. Scientific research and development provide the means (devices, techniques, practices) by which the cold war may be waged most effectively and efficiently. The extent of the U.S. scientific lead over its enemies is more important than absolute accomplishment or progress; therefore, the slowing down of the enemy's scientific progress will have the effect of increasing the U.S. lead.

Of particular significance in the general field of science is the cohesive force evident among individuals comprising each field of science --in some cases such cohesive force rises above differences in ideologies and forms a basis for fraternization, as well as for an exchange of ideas in the particular field.

2. Programs or Categories; primary agency responsibility; action capabilities:

<u>Program</u>	<u>Responsibility</u>	<u>Objective</u>
(1) USIE	State	To promote exchange of information, culture and ideas.
(2) UNESCO		To remove national barriers and provide interchange of scientific developments.
(3) International Control of Atomic Energy	U.N. & State	To promote exchange of scientific information for peaceful ends and to control the use of atomic energy to extent necessary to insure its use only for peaceful purpose
