18 JUN 64

Admiral W. F. Raborn
Director
Central Intelligence Agency
Washington, D. C.

Dear Admiral Raborn:

Since your visit to our Biological Laboratories in Frederick, Maryland, in 1962, there have been many new developments in the fields of chemical and biological warfare which I feel might be of interest to you.

Among these developments have been the large scale testing of chemical and biological weapons, development of new agents and munitions, analyses of U. S. and allied requirements of oversea commanders for these weapons, and increased emphasis on determining the chemical and biological capabilities and intentions of other countries.

Further, in response to the increased awareness of the potential value of chemical and biological weapons, an interagency review is now being conducted to formulate national policy on the use of these weapons. The Office, Secretary of Defense, the State Department and Arms Control and Disarmament Agency are among the agencies directly engaged in this analysis of CB weapons. Since the review does consider intelligence matters, I am confident that your agency will have an opportunity to participate in this review of CB policy.

I feel that it would be to our mutual benefit to have the opportunity to review with you recent developments on chemical and biological matters. If you agree, I would be most pleased to provide a briefing for you and members of your staff in Washington or, even better if your schedule permits, visits with briefings at our chemical and biological laboratories. In preparing the briefing, I would be pleased to emphasize any aspects of CB weapons in which you may have a particular interest.

18 JUL 1983

Arrangements for the meeting and the visits can be made at your convenience.

Sincerely,

D. G. GROTHAUS

Brigadier General, GS
Director of CBR and Nuclear Operations
OACSFOR
