ANALYSIS OF POPULATION STATISTICS
for
YUGOSLAVIA IN GENERAL AND CROATIA IN PARTICULAR

(Plus reproduction of 1961 Yugoslav
Census Report, Bulletin No 250,
Issued November 1962.)

STAT

II. CENSUS DATA 1961

The data of the 1961 Census, bulletin 250 ~~was~~ examined and percentage distribution of selected areas studied.

A-1. The National Republic of Croatia has now the lowest national increase of all national republics of Yugoslavia.

National Increase of Selected Areas in Yugoslavia (Table)

	Popula- tion 1961	Increase 1948-1953 in Num- ber	Yearly inc. per 1,000	Increase 1953-1961 in Num- ber	Yearly inc. per 1,000
FNRJ	18,549,291	1,149,883	13.9	1,557,813	10.8
HRVATSKA	4,159,696	156,164	8.0	223,674	6.8

Range:

Highest	Makedonija	24.3	Metolija	21.2
	Vojvodune	6.9	Hrvatska	6.8

in absence of disease and disaster

This would indicate a) prognosis of increasing national products and prosperity and b) possible excessive emigration.

STAT

A-2. Marital Status of the Population Age 15+ (Table)

	% FNR YUGOSLAVIA	% N.R. CROATIA
Unmarried males	13.20)	13.08)
) 24.04) 24.08
Unmarried females	10.84)	11.10)
Married males	33.00)	31.60)
) 67.08) 64.20
Married females	34.08)	32.60)
Widowers	1.78)	1.59)
) 9.17) 10.27
Widows	7.39)	8.68)
Divorced males	0.44	0.43
Divorced females	0.99	1.01
Unknown	0.20	0.31

The high number of widows is outstanding. Information on distribution by marital status and age groups are obtainable byt not in the bulletin 250. On inquiry this high figure of widows pertains mainly to age group now 30-49 and 45-59 and still reflects the deficit of World War II.

TOTAL	48.7534	51.2465	100%	47.7487	52.2511	100%

More detail analysis shows a much obvious deficit of males in the group 60 and over; a combined effect of World War II and increased probability of dying of the males in comparison with females may be the more likely explanation. Interesting in the male/female distribution is the excess of males in the 15-29 years of age group. In most countries,

STAT

STAT

STAT

with the age of 20, the ratio of 105 females to 100 males is the accepted figure which would just be the reverse from the ratio for Yugoslavia which shows approximately 102 males to 100 females of age 20. This means an excess of 40,000 males without a female counterpart in the 15-29 age group.

% Number of Males per 100 Females by Age Group in FNRJ CROATIA 1961

	Yugoslavia	Croatia
	Total: 95.1%	Total: 91.3%
0 - 4	104.5	103.3
5 - 9	104.6	103.5
10 - 14	104.2	102.9
15 - 19	101.5	101.5
20 - 24	101.6	103.5
25 - 29	100.2	101.6
30 - 34	96.8	96.6
35 - 39	82.5	76.3
40 - 44	82.7	78.1
45 - 49	86.0	81.3
50 - 54	93.9	86.4
55 - 59	92.6	86.0
60 - 64	83.4	79.9
65 & over	69.6	63.8

The deficit of males in the male/female ratio starts with age 30 and over and is more obvious in Croatia itself than for Yugoslavia as a whole.

STAT

Main factors: World War I
World War II
Emigration

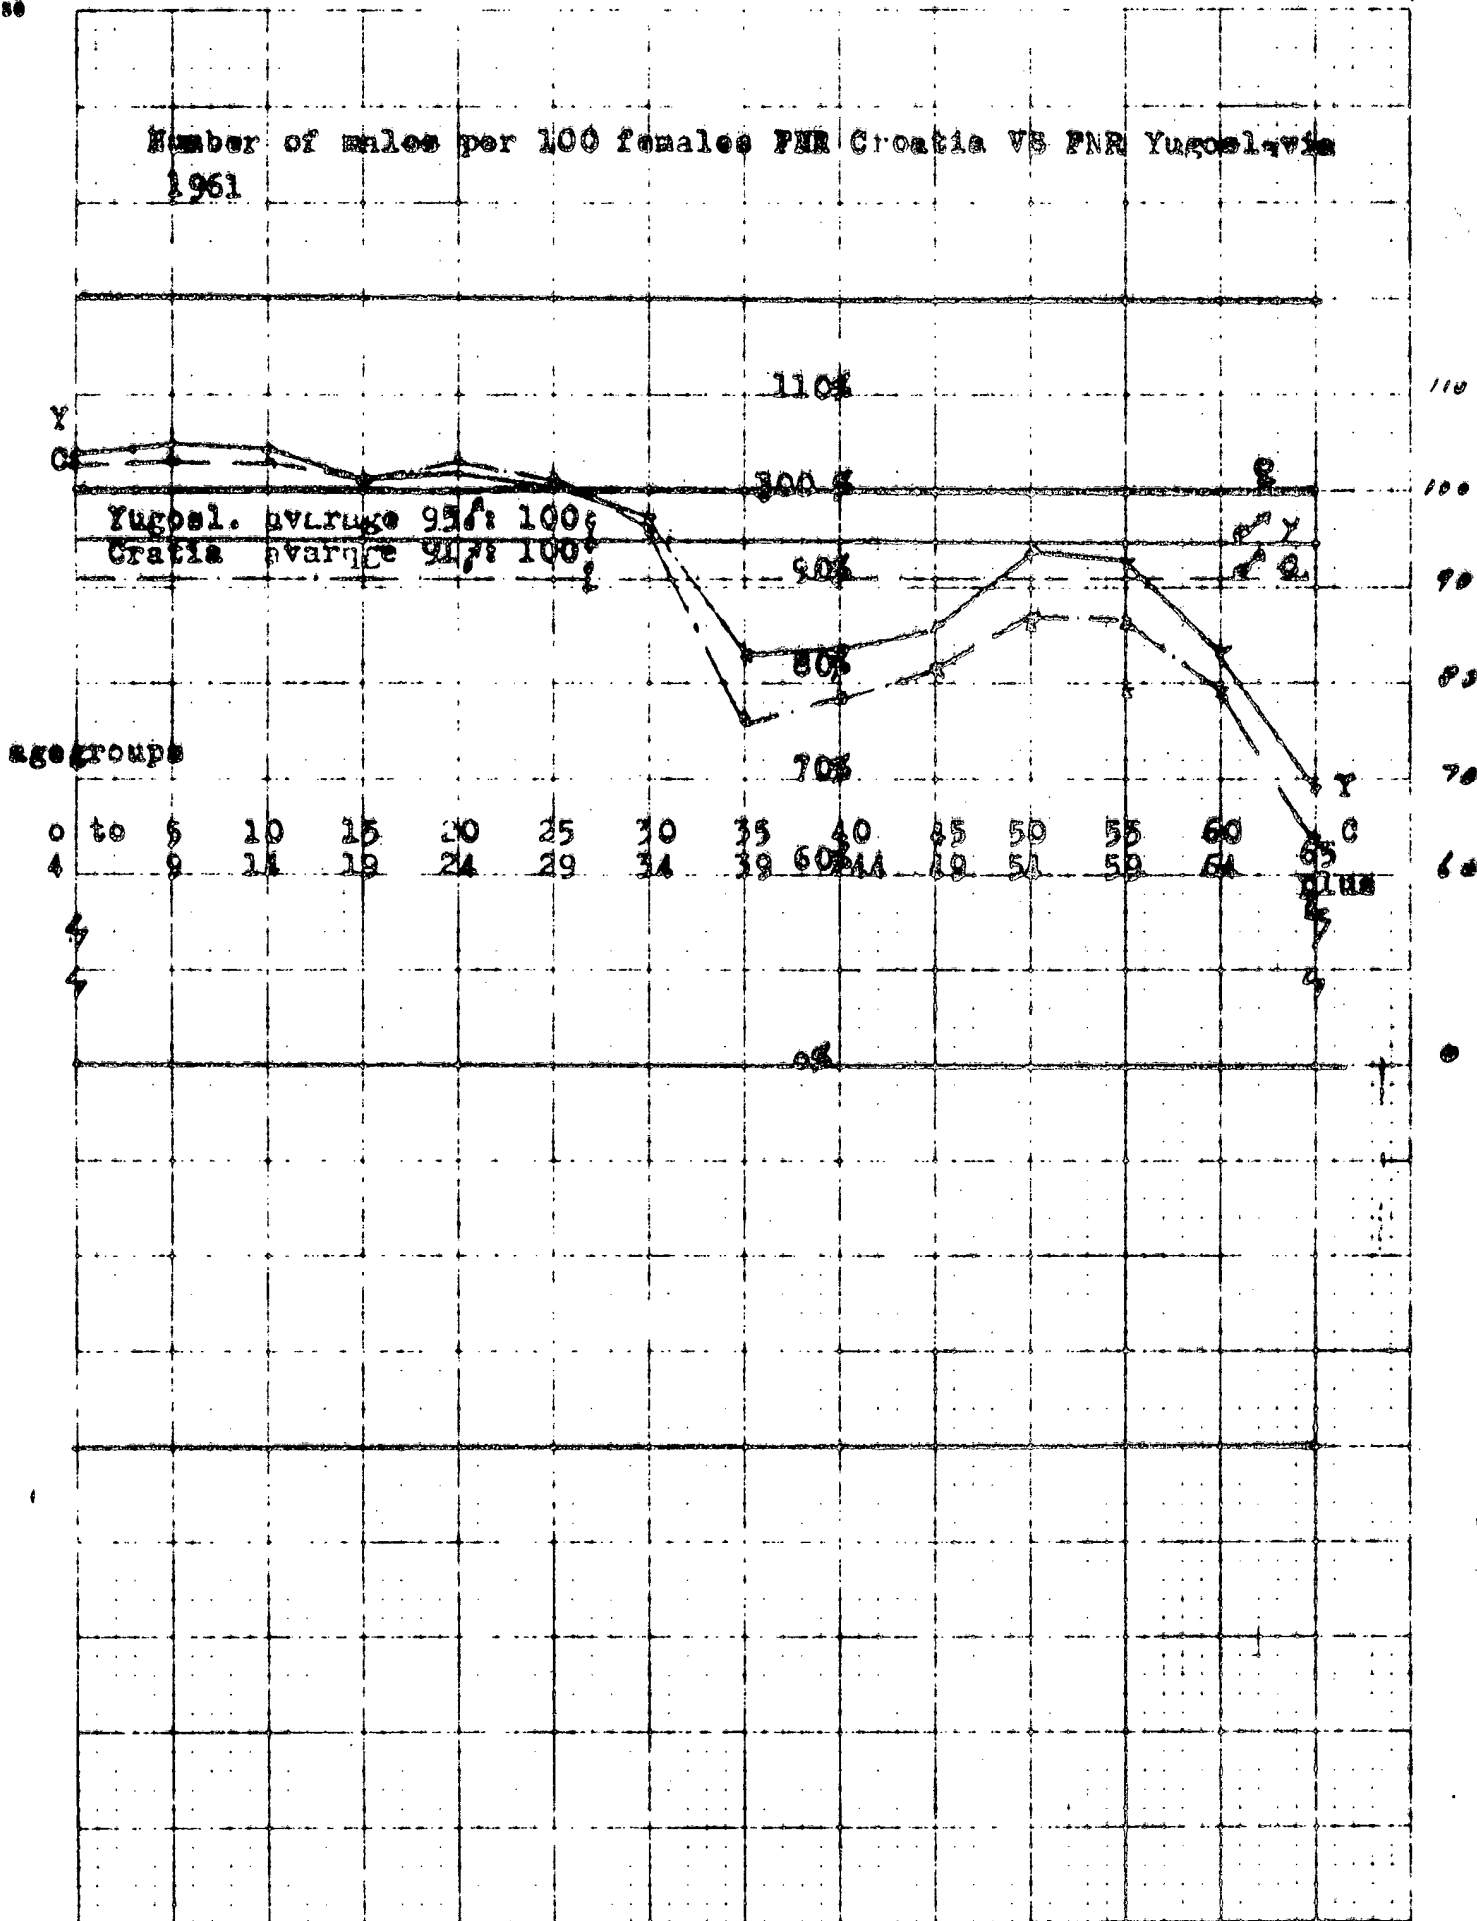

Males have a greater probability of dying

To what extent this factor contributes to the deficit cannot be assumed from these figures.

Data on nationality, place of living by origin of birth, age literacy, schooling, occupation and participation in industry and agriculture is available, also figures of households by the number of family members and their resources as to vague earnings or agriculture ownership.

Male/female Ratio:

1. In the Region of Pula there were more males than females up to 34 years of age and in the higher age groups, only from 50 upward is the ratio lower than the Croatian deficit. (See previous table)

of Istria and Croatian Medisaurje 1951 census

SUSINE DIETZEN CO
MADE IN U.S.A.

NO 348 - NO DIETZEN GRAPH PAPER
10 X 10 PER INCH

(a) Pazin has less male infants in the 0-4 and 5-9 age group; excessively more in the 20-24 age group and a higher than average proportion of males in the 35-54 age group. There is a marked deficit in the males born 1895-1905 (World War I recruits).

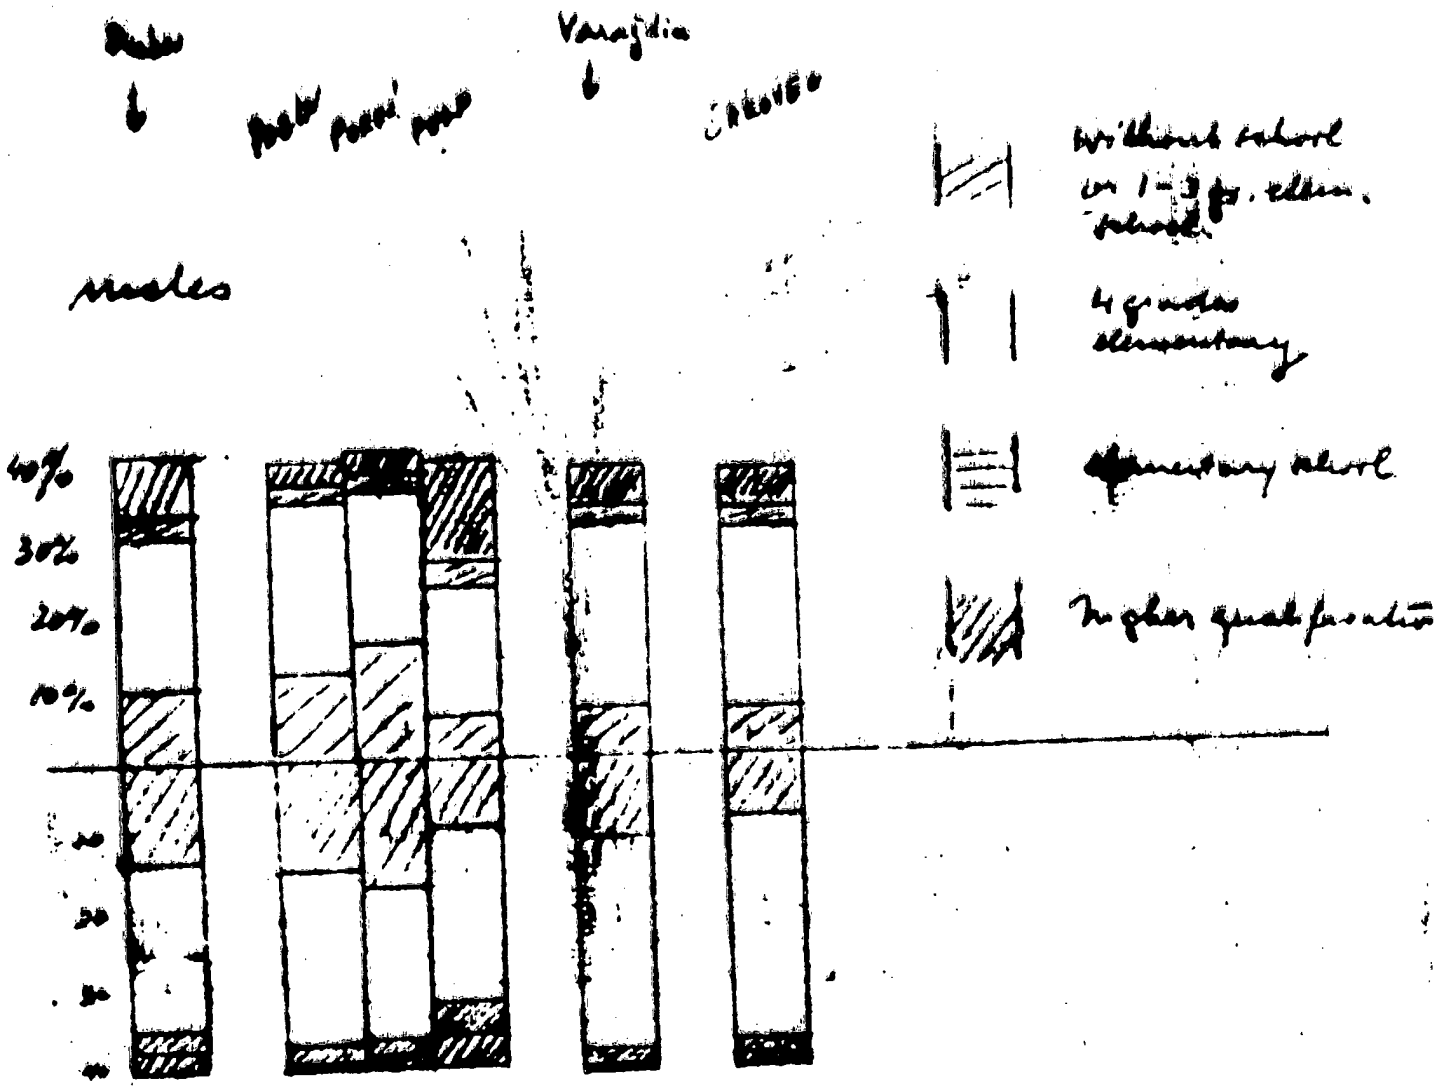

(b) Porec has an unexpected excess in the 15-19 year old male group born 1941-1945. There are more middle age men in Porec 20-49. If there is an immigration there - more males than females arrive. If there is an "out" migration, the female and the elder female have gone with the men. The 50 to 65 plus age group fails to show the expected dip due to increased probability of dying in the male.

(c) Pula has similar trends as Porec except in the older age group which approaches the Croatian average.

2. Whereas Pula has more middle aged men than expected, Varazdin has less. Especially low is the deficit in the 25-29 age group but also in the 30-34 age group.

3. The deficit of the young adult male and the providing male is even more evident in the area of ~~Čakovec~~.

There was considerable difference in schooling. Istria and especially Pazin and Porec had 12-14% of the males and 14-17% of females with nor or less than three grades of elementary school. National boycott of Italian schools must have played some role. Medjimorje has less higher schooling, but also less incomplete elementary schooling. Vocational schooling and middle school attendance is high for the Istrian male, especially in Pula. Istria sends more people to the universities than Medjimorje.

Elementary and higher schooling in Istria and Medjmurje selected areas. Census 1961.

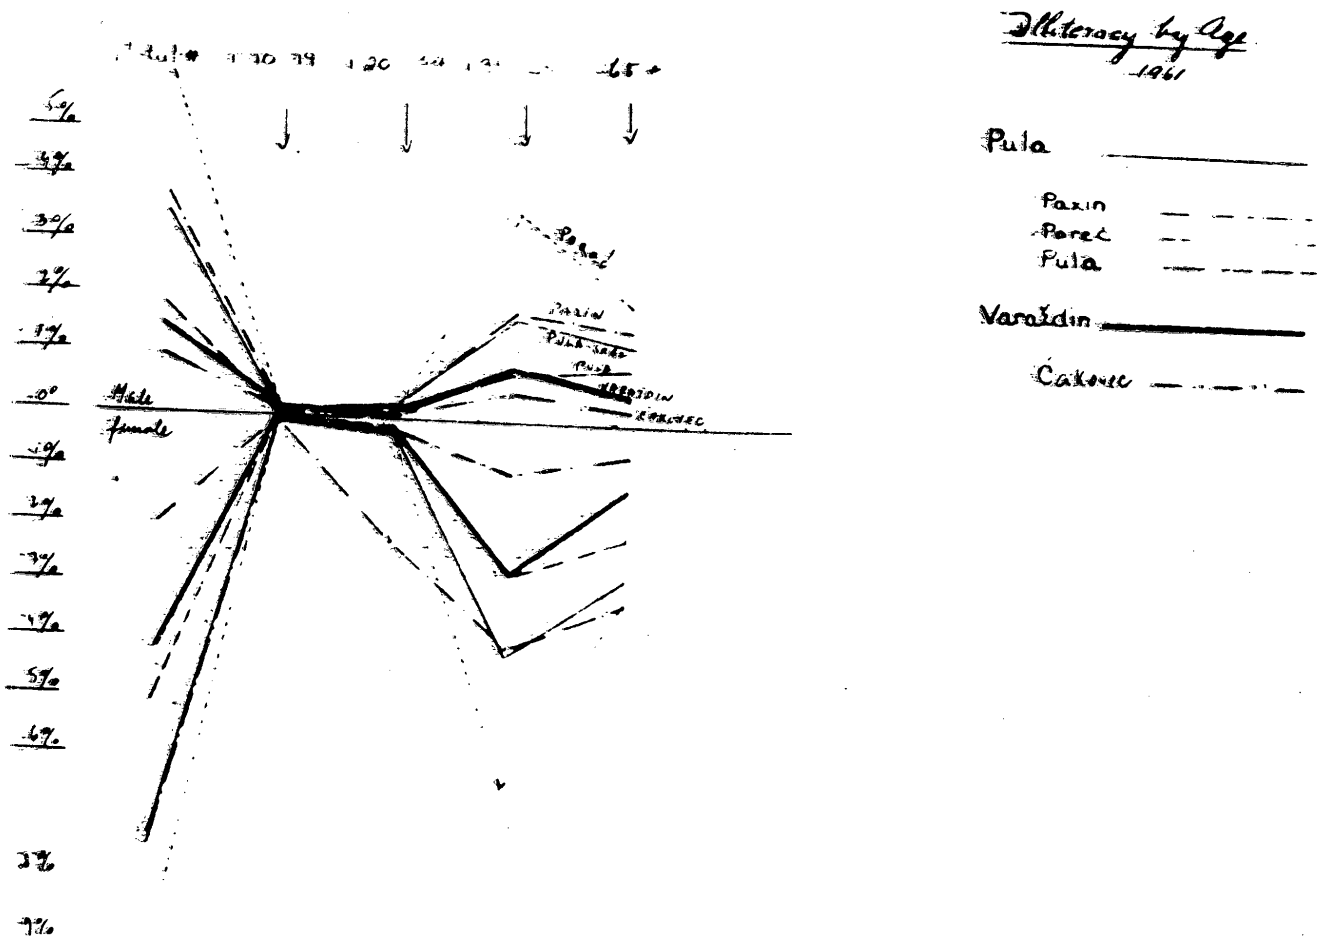

The illiteracy of the Istrian middle age female of 20 is noteworthy. The illiteracy of both male and female born 1925 and before is considerable for a central European area. This points to residual of illiterate population which stands out more in proportion in areas of emigration. Both Istria and Medjimoreje represent such reservoirs. Female illiteracy exceeds the male in the elder age group. Parallel with illiteracy goes superstition. Could it be that an association between deboleza and areas with higher illiteracy exist?

Agriculture:

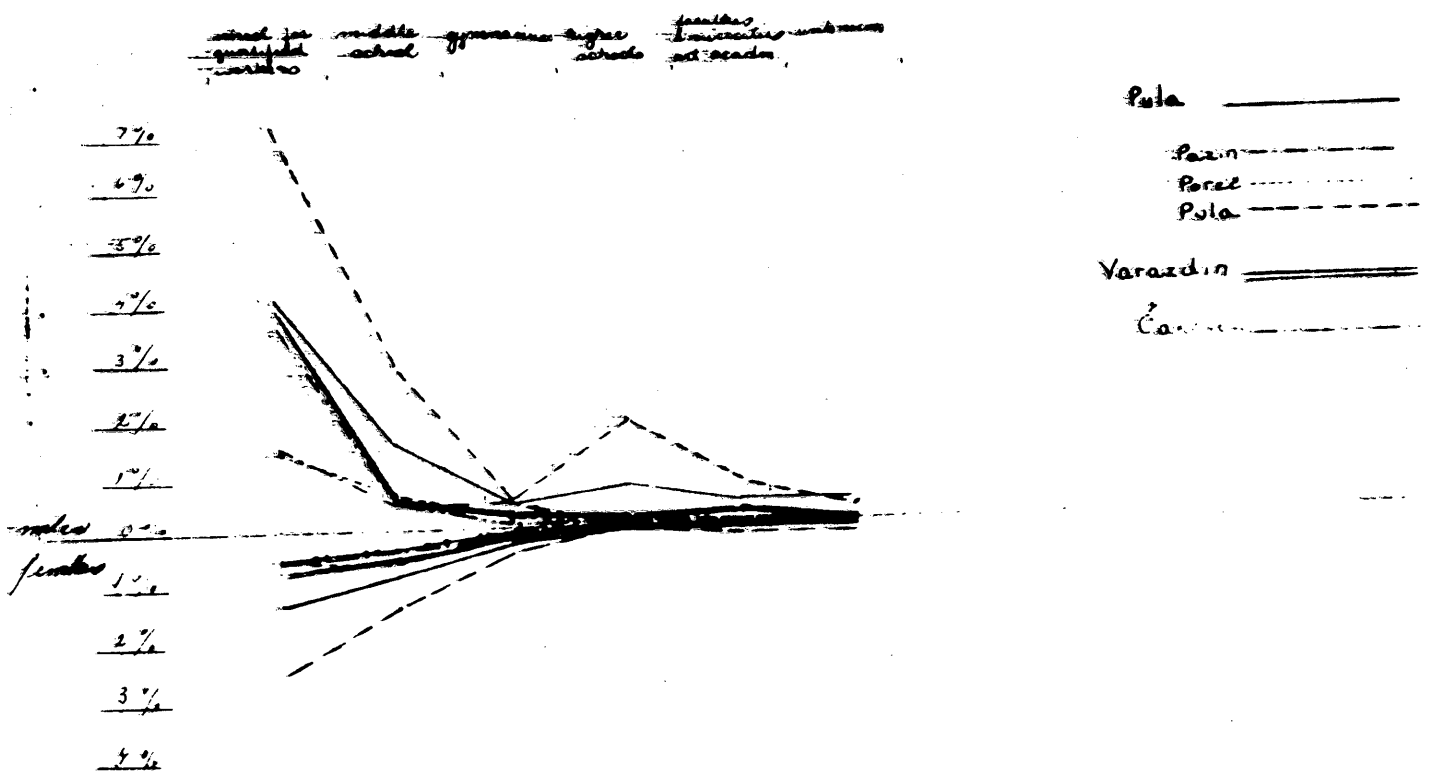

Yugoslavia was once considered an agricultural country. Today it is rapidly industrializing. Istria especially has lost a good part of her agriculture population to industry, commerce, fishing and administration. ^{of the} One/main agricultural product is wine. The deficit of active winegrowers is increasing. In Motavum, for instance, the outstanding cause of concern of the local winegrowers is lack of people attending the vineyard. Emigration made the situation worse. Families from other winegrowing areas are settling around Motavum now. Nearly 20% of the population are from Medjimoreje who have permanently settled in Istria.

Industry and especially mining has colonies of workers from Bonnia, Dalmancija, Medjimoreje and southern Serbia and Macedonia but only for temporary stay.

The agricultural immigrant in Istria is a permanent settler and comes with his dependents. The emigration of other groups choosing Italian nationality is not yet balanced. It was fortunate to meet health officers who could produce personal experiences and expressions from Istria and Medjimoreje. STAT

The mixed agricultural type of household

Istria and Medjimoreje have a considerable proportion of households where the income comes from agriculture and from industry and other resources. The distribution is, however, entirely different.

Proportion of households engaged in agriculture, mixed agriculture type of income and non-agriculture type of income (Table)

The households in Medjimoreje are larger than in Istria

Households

Composition of households: agricultural, mixed agricultural type and non-agricultural

There are considerable general differences between the population distribution, male/female ratio, household age relation to agricultural resources, distance to field and vineyard, literacy and many others. The national and historical differences appear striking but more outstanding is the geographic and climatic differences of these areas. After all, one area is panonian and one Adriatic; these are different like the people from Maryland's Eastern Shore and people from mid-western flatlands. To use one area for a control group for any health problem is hazardous. Selection of small communities present even more choice of divergent variables.

Alternate suggestion:

By looking for association of variables on people who come with a complaint called "D", the most obvious control group would be the people in the same environment who don't come with complaint "D"

Hereby an alternate suggestion as to locality is submitted which also takes into consideration the type of locality and does not limit itself to rural conditions only.

Suggested Points of Investigation

	Srez Pula	Srez Rijeka	Srez Zador
Rural township, remote from coast	Pazin, Motavum	Moicenica (town)	Zemunski
Coastal city	Porec-Vrsar	Losinj	Biograd
Island or semi- isolated waterfront	Medulic	Omislj, Bosha	Ugljan

None of these areas are fully isolated but all have similar climate, geography, nutrition, heritage and expressions for weakness and disability.
