ORDER OF BATTLE HANDBOOK
AND INSTALLATIONS LIST,
GROUP OF SOVIET FORCES, GERMANY

PART ONE - INTRODUCTION

Chapter 1

PURPOSE AND SCOPE

1. PURPOSE: This Order of Battle Handbook has been designed:
 - a. As a handbook to assist the order of battle analyst in the production of order of battle intelligence by providing the latest intelligence, intelligence data, and information available on the Group of Soviet Forces, Germany.
 - b. To provide the analyst with a comprehensive study of the various tactical and support units presently found in the GSFG, insofar as organization, strength, and equipment are concerned.
 - c. As an aid to intelligence collection personnel by providing a background for proper interrogation and developing of targets.
 - d. As a repository for order of battle intelligence insofar as the identification and disposition of GSFG units are known. Additional intelligence concerning key personalities in the GSFG has been included where possible.
 - e. As a comprehensive list of military installations controlled and used by the GSFG and the East German Army.
2. SCOPE: This handbook has been designed to include:
 - a. The IDENTIFICATION of all known GSFG units.
 - b. The DISPOSITION of all tactical and support units in the GSFG where known.
 - c. The known PERSONALITIES in positions of importance in the GSFG.
 - d. The ORGANIZATION and STRENGTH of the tactical units in GSFG by type.
 - e. A brief description and account of the use of the major weapons and items of equipment found in the GSFG.
 - f. A listing of all Soviet and East German installations in the zone, with exact locations, size, and occupancy of these installations.
3. ADDITIONS, DELETIONS, AND CORRECTIONS:
 - a. Recipients of this order of battle handbook are encouraged to submit any valid additions, deletions, or corrections to the book as printed.
 - b. Changes will be published quarterly as additional intelligence is produced, or as units are added or deleted. Complete revision is contemplated only on an annual basis, since it is believed the holdings are sufficiently valid to sustain continuity with only minor changes.

Chapter 2

GENERAL

1. HISTORY AND BACKGROUND OF THE SOVIET ARMY:

The Soviet Army officially came into being on 23 February 1918 as the "Workers' and Peasants' Army". The old Imperial Army had been largely dissolved, and the Workers' Militia and the Lettish regiments, with which the communists had seized power, were in need of a unified command. All revolutionary units, ex-Tsarist commands, and armed civilian and partisan groups were drafted into this new force. Tsarist officers were given a choice -- of serving in the force or being shot. Actual control was placed in the hands of party members, (commissars) who were appointed as deputy commanders with the power to countermand the orders of the military commanders. Trotsky was named People's Commissar (Minister) of Defense.

The new army soon found itself embroiled on several fronts, fighting the old White Imperialist forces, the Polish army, and the units of the new Ukrainian army. Cavalry was the major arm, and the Maxim 1910 machine gun, mounted in a horse-drawn wagon, provided the main support. Following this fighting, which lasted until 1921, the country was completely exhausted. This backward and underdeveloped country could not support a large modern army.

It soon became apparent that the former Tsarist officers were the only trained and relatively efficient officers in the armed forces. As such, they would constantly represent a threat to the Bolsheviks until a corps of Communist-inclined officers could be created from the political acceptable masses to replace them. In the middle 1920's, Frunze, who was Trotsky's successor, began to create the schools and academies necessary to provide the officer cadre for the future Communist army. Slowly, from out of the chaos, came some measure of order and progress.

At this same time, Stalin, who was eliminating his opposition one by one, was coming into power. His aims and ideals were based on two principles: make the Soviet Union the "arsenal of world communism", and industrialize as rapidly as possible to provide the heavy industry that Russia needed to support a large modern army. Every effort was directed towards that end. "Production of the means of production" became the Soviet motto as they began to produce the lathes, presses, mills, and other machinery with which tanks, artillery, munitions, and heavy equipment could be manufactured.

During this period, the Soviet High Command was working closely with the German General Staff, and many of the ideas and much of the doctrine put into effect was based on German concepts. This is often apparent, even today, in the development of the modern forces of the USSR. However, in the middle 1930's, some documents were sold to the Soviets which implicated the Red Army Chief of Staff in a plot to overthrow the communist regime with the aid of the German government. The papers were later proved to be false, but meanwhile, because of these documents, the cream of the Red Army had been eliminated -- thousands of senior officers throughout the military having been executed. This left only inexperienced junior officers in positions of high command. The plot, along with Hitler's increasing anti-communist policies, eliminated all remaining ties between the two countries.

Prior to World War II, the forces of the Soviet Union were involved in several engagements, two of which were actions in the Far East against the Japanese troops stationed in China. The Soviet victories were largely due to the tank tactics used by a young officer named Zhukov, who was later to become the minister

UNCLASSIFIED

UNCLASSIFIED

of defense and one of the most decorated of Soviet heroes. Two minor actions in Poland and Bessarabia gained large expanses of territory at relatively little cost. Then came the winter of 1939 when the Soviets sent their armies against Finland. In three months of bitter winter warfare, the Finns inflicted one million casualties on the Soviets, and taught them how poorly prepared and trained their military forces really were. Sheer weight of numbers finally brought about a victory for the USSR.

In the spring of 1940, the Soviets feverishly set about reorganizing their forces to correct the deficiencies brought out by the Finnish war. They were in the midst of the reorganization when on the morning of 22 June 1941, the German Army crossed the Bug river and began its march to the gates of Moscow. During the early months of the fighting, the Soviets lost a great bulk of their armor, an estimated 75% of their artillery, most of their better troops, and a great bulk of troops intact, and when the force of one of the bitterest winters Europe had known for years hit the unprepared German Army, the weather accomplished what the Red Army had failed to do. The German advance was halted, and thousands of German soldiers froze during the terrible winter.

From this point, the Soviets gained gradually in strength and tactical ability, with U. S. lend-lease supplies playing an important part in their recovery. Although the Germans captured even more land in the following years, the Soviet Army had been saved, and it was only a matter of time until the tide turned in favor of the forces of Stalin. The eventual victory cost the Russians 13,000,000 casualties -- three times as many as the Germans suffered on the Eastern Front -- however, it gave them control of rich areas in Central Europe which they could drain to reconstruct and support their war-shattered economy. In addition, it gave them a supreme confidence in their military ability -- a confidence which was not entirely justified. The Red Army was at a strength of approximately twelve front contained an average of three rifle armies, a tank army, and an air army. However, only about 10% of the troops in the average front were mechanized.

In 1946, the first of a series of reorganizational steps was effected. The principal aim was to motorize and re-equip the army along more modern lines. Line divisions received more organic armor and artillery; supporting services were increased; and the line divisions were streamlined towards a better balance of arms. The total army strength, which had reached a peak of approximately 600 divisions, was reduced to an estimated 175 divisions of all types.

Since these early steps in reorganization, the mechanization of the forces has steadily progressed, until today over half of the line divisions are tank divisions or a mechanized type. All divisions outside the Soviet Union are of one of the armored types, which is believed to be a definite Soviet military trend. The Soviet military leaders made increasing reference during 1957 to the reorganization of the armed forces along modern mechanized lines, with the units fully equipped for atomic warfare and capable of swift cross-country movement.

UNCLASSIFIED

SECRET**2. REORGANIZATION 1957 (SECRET)**

The latest step in the reorganization plan was initiated in April 1957. At this time, a series of transfers of troops and equipment was effected that led to a significant change in unit organization and in the command structure of the GSFG. Heavy-tank/assault-gun regiments were transferred from the mechanized divisions to the tank divisions. The tank divisions dropped the equivalent of one medium tank regiment, transferring them to the areas of the rifle divisions. The four rifle divisions received enough tanks and armored personnel carriers, plus a rocket launcher battalion, to change them into motorized rifle (mechanized type) divisions. Changes in major unit subordination were effected in such a manner as to develop two armies composed of only three tank divisions and four armies were formed of three motorized rifle (mechanized) divisions and one tank division each. The rifle armies, the rifle corps, and the rifle divisions have all been eliminated in the trend toward increased mechanization. Some changes have been reflected in the supporting artillery, rockets, and engineers as well, which are shown in the section of this publication on unit organization.

3. THE POLITICAL SYSTEM IN THE ARMY:

The dominating factor in the overthrow of Marshal Zhukov and the rise of Malinovsky and his faction was the necessity of tightening the control of the armed forces by the Communist Party. Zhukov was accused of "separating the party and political units within the military forces to the level of 'educational units'". Without strict party control and political watchfulness, the armed forces could become an anti-Communist threat. For this reason, in each unit of battalion size there are three political officers whose major duty consists of delivering an unceasing series of political lectures to the troops, praising the achievements of the Party. They point out that under Party direction, the Soviet people have become the chosen ones to rule the world. Their major task, however, is to watch for political disaffection.

A second control organ within the military is the association of party members, or the Komsomol (Communist Youth) members within each unit. Overt in all activity, these people constitute the "second team", and carry on political indoctrination and control on a more individual basis. The third control unit operates in a covert manner, with spies and informants using terror and fear tactics to accomplish its goals. This is the feared "OO", or "osobyi otdel", a secret police organization attached to all military units. Workers of the "OO" carry on continuous investigations of "counter-revolutionary" activity within the units. They are not regular military personnel although they wear uniforms; actually they are a part of the police security apparatus, and will ruthlessly liquidate any openly critical or disaffected soldier who shows "treasonable tendencies". The maximum sentence for such an offense is five years. This use of a secret police force is nothing new in Russia, since it was first started by Ivan the Terrible, and was continued by the Tsars until 1917. Communism's survival in the USSR, and the military, is dependent upon the KGB-MVD security forces. Without them, and the ever-present threat and terror, the Iron Curtain could not be maintained.

SECRET**CONFIDENTIAL****PART TWO - ORGANIZATION****Chapter 3****HIGH LEVEL ORGANIZATION****1. GENERAL:**

The military establishment of the Soviet Union is controlled from the highest levels by the Council of Ministers, which in turn is directed by the CPSU (Party) President. In peacetime, national directives are handed down from the Council of Ministers to the Minister of Defense. However, during a war, a Supreme Military Council (Stavka) is formed which deals directly with the General Staff in all operational matters, bypassing and superseding the Minister of Defense.

2. THE MINISTRY OF DEFENSE:

Marshal R.V. Malinovsky, the present Minister of Defense, has complete operational control of all military activities on land, sea, and in the air. However, he is constantly watched and closely supervised, as are the succeeding command levels under him, by political representatives of the Communist Party and the Committee for State Security -- the secret police organization. For operational matters, he has under him the General Staff, which transmits his orders directly to the Military Districts and troop units involved. He is advised on military and policy matters by an advisory council composed of several senior military figures. A Deputy Minister for "Special Questions" acts as the senior trouble shooter and as his chief assistant.

Also directly subordinate to the Minister of Defense are the chiefs of the three major services (Ground Forces, Air, and Navy); a Logistics chief (Near Services), a chief of Air Defense (FVO), an Inspector General, and a Chief of the Main Political Directorate. Under these last senior division heads are ranked the branch "directorates" or sections, major air elements, and a few General Headquarters Troops of a special type, such as airborne and possibly missile.

The branch directorates (artillery, tank and mechanized, signal, engineer, etc), formulate the policies, doctrinal concepts, develop the organization, and carry on such functions as procurement and development of materiel, training, and research within their respective branches of service.

3. THE GENERAL STAFF:

The General Staff was originally patterned after the German General Staff, and as such has divisions for operations, intelligence, organization and mobilization, Warsaw Pact Forces (Soviet), and other staff functions of a more minor nature. The division of highest importance is the operations division, since most of the operational orders to the field flow through the General Staff, if they are not initiated there. However, under the Soviet politico-military system, the General Staff cannot be considered all powerful, as was the old Prussian organization.

4. MILITARY DISTRICTS:

There are eighteen military districts in the Soviet Union, which compare roughly to the Army areas in the Continental U.S. The commander of a military

CONFIDENTIAL

CONFIDENTIAL

district has operational control of all ground and air units in his area, with the exception of the long-range air units and the PVO Air Defense units, which come under direct control of the Ministry. The airborne elements and other GRQ reserve units in the area will be attached but not assigned to the military district, from which they will receive basic administrative support. The principal functions of the Military District are operations, training, and mobilization.

The long chain of Soviet control can readily be seen in the functioning of the Military Districts. Operational orders flow from the Ministry through the General Staff, and are carried out by the Military Districts. Training directives, supply procedures, administrative orders, and other similar directives are received through the chain from the various branch directorates under the Commander-in-Chief of the Ground Forces, the Air Chief, Chief of Rear Services, and other authority as necessary.

The Military District is concerned chiefly with the registration and drafting of the conscripts within its area, and also places great emphasis on the development of mobilization procedures and techniques. In other functions related to its troop units, Military District Headquarters functions similarly to any senior army or theater headquarters.

The Groups of Forces (see Chapter 4, par 3) outside of the USSR may be considered to operate in much the same manner as the Military District in the homeland. Although not having a conscription mission, many of the other functions are the same as those for the Military Districts.

One distinct exception to the normal command chain is found in the Security Forces, Border Guards, and other security elements. Although they are supplied with conscripts and military supplies through the normal military channels, they do not come under the actual control of the Military District commander. This control is held in the political channels.

CONFIDENTIAL**CONFIDENTIAL**

Chapter 4
MAJOR UNIT ORGANIZATION

1. GENERAL:

Soviet organization generally parallels that of most conventional armies, in that divisions are composed of regiments, regiments are made up of battalions, battalions of companies, and so on. Nomenclature and an approximate triangular organization gives the appearance of a conventional force. There are, however, some organizations that are quite different from any of those known in the Western armies, and these differences are incorporated in the following paragraphs on unit organization.

2. ARMY GROUPS, OR "FRONTS":

During World War II, "Fronts" apparently derived their designation from the geographical area in which the Front was originally formed. Thus, First Ukrainian Front, Belorussian Front, etc.; operated in those areas initially, but retained the same designation after military operations forced them to move into another area. In the event of war, it is likely that a similar geographical designation may be applied to these large Soviet formations. For example, a Front operating in northern Germany could become "Front North"; another, "Front Center", etc.

Organization-wise, the only US force comparable to the "Front" is the Western type Army Group. Like the Army Group, the Soviet Front has no fixed strength or composition, but is formed of several armies with the necessary air, artillery, engineer, and other supporting arms and services, that would be required by the mission and situation. Unlike a US Army Group, however, the Soviet Front has administrative as well as tactical functions.

3. GROUPS OF FORCES:

This type of force is subordinate to the Ministry of Defense, and the designation "Group of Forces" is used only for those military forces on occupation or comparable duty outside the borders of the USSR.

The designations of the Groups of Forces is also generally in accordance with their geographical location. As examples, the original four Groups of Forces in Eastern Europe were:

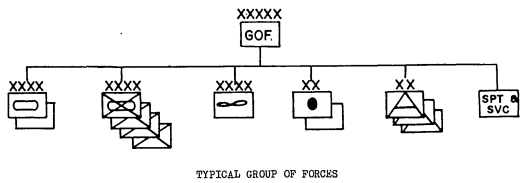

- a. Northern Group of Forces (NGF) - Poland
- b. Central Group of Forces (CGF) - Austria and Hungary, now called Soviet Forces, Hungary (SFH)
- c. Southern Group of Forces (SGF), now called the Independent Mechanized Army, Rumania.
- d. Group of Soviet Forces in Germany (GSFG) - East Germany

At the close of World War II, these four Groups of Forces were formed, and they corresponded generally to the World War II type Fronts. In the event of hostilities in Eastern Europe, a similar type of organization might be expected.

CONFIDENTIAL

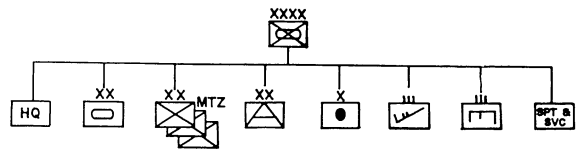

CONFIDENTIAL

The Group of Soviet Forces Germany is the only one which has maintained appreciable size and strength, (22 line divisions, 9 AAA divisions, and 2 artillery divisions, organized into six armies). The Soviets changed the name from the Group of Occupation Forces Germany to the Group of Soviet Forces Germany, probably to give the impression that the occupation, as such, had ended.

CONFIDENTIAL

There is probably no fixed structure for combined arms armies, but those in the GSPG have developed into a definite pattern. Each of the four combined arms armies in the GSPG has three motorized rifle divisions, one tank division, one antiaircraft artillery division, and one brigade of artillery, in addition to appropriate support in the form of a rocket launcher regiment, engineers, signal, motor transport, and other normal support and services.

4. ARMIES:

a. General.

Soviet armies in the GSPG are of two types - tank armies and combined arms armies. The tank armies are composed of tank divisions, and the combined arms armies are comprised of combinations of tank and motorized rifle divisions. Soviet armies are designated by a number, normally combined with a descriptive or honorary name; for example, EIGHTH GUARDS ARMY, THIRD SHOCK ARMY, SECOND GUARDS TANK ARMY, etc. The designation "Guards" is honorary, and is awarded to a unit as a form of commendation. It has also been awarded to corps, divisions, and to smaller units and becomes a part of the title for the personnel of such units. The term "Shock" was originally descriptive of the type of mission assigned to a unit and its general tactical employment, but it is now purely honorary. The term "Oadre" has also been used in the designation of armies, referring to a unit that was held only at skeleton strength. It should be noted that tank armies will be designated "Tank" in their titles, but that the combined arms armies will have no descriptive term in their designations, as was the case in the old type rifle armies.

b. Combined Arms.

The combined arms army is the largest Soviet military formation which normally does not contain any major rifle units. It is usually subordinate to a Group of Forces in peacetime and to a Front in war.

CONFIDENTIAL

CONFIDENTIAL

CONFIDENTIAL

c. Tank Armies.

One of the results of the reorganization of the GSPG was the formation of two tank armies. These new organizations (not to be confused with the tank armies of World War II) were developed by the transfer of four divisions between armies in such a manner as to form two armies composed of three tank divisions, one AAA division, and the other supporting units as described in the combined arms armies. The concentration of armored firepower, and heavy, mobile breakthrough forces in this formation can be appreciated by a study of the following charts.

NOTES

UNIT	Personnel	Hvy Tank	Med Tank	Asph Tank	SU/SPU	152mm G/ft, 122mm G	122mm How	122mm How	100mm Gun	57/16/95mm Gun	240/200/140 RL	160/120 Mortar	85/100 AA	37/57 AA	APCs	Trucks

* Strength figures are estimated.

CONFIDENTIAL

5. DIVISIONS:

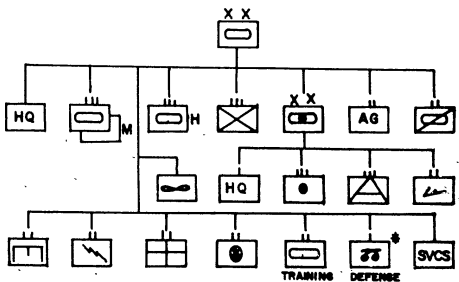

a. General.

The line division is the highest echelon in the Soviet Army that is formed within a fixed table of organization and equipment. This is in contrast with the artillery and antiaircraft artillery divisions, also present in the GSPU, which show differences that reflect flexible T/OE's for these units.

Divisions are designated numerically, and will include the type of division as a part of the designation. In addition, the honorifics of a particular division will normally be included in the unit designation; thus, 21 Guards Mecc Div, 39 Guards Motorized Rifle Div, 6 Breakthrough Artillery Div.

b. Tank Divisions.

The tank division remains the Soviets' heavy striking force of division size. Due to the reorganization of the GSPU over the past year, this armor-heavy division has received even more striking power in the form of a probable doubling of heavy tank strength. A corresponding drop in medium tank strength was noted, but the additional heavies and an increase in the number of heavy assault guns gives the division a more powerful force from the standpoint of sheer weight of explosive delivering capability. With only one motorized rifle regiment in the division, the force must still be considered top-heavy in armor from a balance point of view. However, in consideration of the normal mission of this force, and its probable use for counter-attack, it appears suitable for its missions. The artillery element has also been increased in power with the replacement of one battalion of heavy mortars by a battalion of 18 x 152mm howitzers, and the upgunning of the gun battalion from 63mm guns to 100's. The rocket launcher battalions have practically all received the BM-24, 240mm, 12-round launcher, thereby increasing the firepower of this unit.

* May no longer exist

c. Motorized Rifle Divisions.

One of the major results of the 1957 reorganization of the GSFG was the development of a new type mechanized division, known as the Motorized Rifle Division. The terminology is Soviet, and it raises several questions as to the use of the term "Motorized Rifle". It has been apparent throughout the reorganization that the former mechanized divisions were losing only the heavy-tank/assault-gun regiments, and that the four former rifle divisions were built up almost to the strength of the former mechanized divisions. Again, the HTAG regiment was the only unit missing from the mechanized type organization. Therefore, the divisions are, in effect, a slightly reduced mechanized division. The GSFG has not sacrificed mechanization in favor of conventional infantry divisions, but has increased in firepower and mobility by the strengthening of the former rifle divisions. Therefore, when the strength of the GSFG is considered as being ten tank divisions and twelve motorized rifle divisions, it must be remembered that the force is actually ten tank divisions and twelve light mechanized divisions.

* Reconnaissance battalion may now be company.
Chemical defense company may no longer exist.

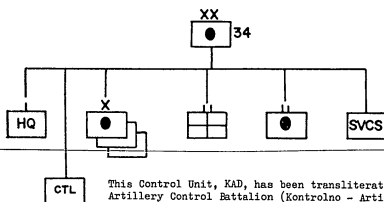

CONFIDENTIAL

d. Artillery Divisions.

The two heaviest support units of the CSFG are the 6th and 34th Artillery Divisions. These large artillery formations show a definite tailoring for specific support missions, and may be considered as an example of Soviet artillery support doctrine. Each division has been organized for a specialized task, and the organization makes this specialization obvious.

The 34th Artillery Division is a conventional heavy general support unit. The organization of three brigades of conventional artillery fits a general concept of artillery support on a large scale. The 6th Artillery Division is a grouping of specialized units for divergent types of support. The light howitzer brigade, the medium howitzer brigade, the rocket launcher brigade, and the heavy mortar brigade all show specialization of mission and support use. The organization of the brigades themselves (See Chap 5, Par 2), shows the ease with which the units may be allocated to sectors of the front for distinctive types of support.

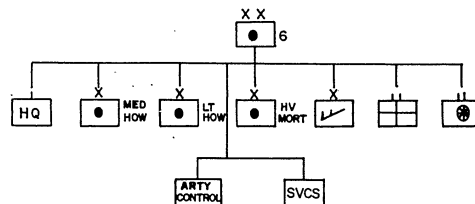

This Control Unit, KAD, has been transliterated as the Artillery Control Battalion (Kontrolno - Artilleriskiy - Division). The unit apparently functions as a direction center, communications center, observation unit, and may also have survey responsibility. The term battalion is mentioned since the Russian "Division" generally refers to a unit larger than battery, but still smaller than a US battalion.

6. Antiaircraft Artillery Divisions.

Antiaircraft artillery divisions are found in each army and under direct control of the GSPG. There are three such GHQ divisions, and their disposition clearly shows the mission of AA defense assigned to them. One is located in the southeastern sector of the zone, defending the Wismuth uranium mining area; another division protects the GSPG headquarters area of Bismarck, Zossen-Wunsdorf, and the area south of Berlin; and the third has the mission of protecting the crossing points over the Oder River in the vicinity of Kietz and Frankfurt/Oder.

Each division has two medium and two light regiments, which should be equipped with 100mm and 57mm AA guns respectively. There is, however, the indication that the re-equipment program has not been completed in these divisions, and some 85mm and 37mm guns are still reported. The table of organization and equipment is accepted as indicated in the following charts.

Chapter 5
MINOR UNIT ORGANIZATION (DIVISIONAL)

1. GENERAL:

Due to the recent reorganization of the GSPG, the complete organizational details of many of the minor units have not yet been determined. Units have been inactivated, some new units have been formed, and there have been many relocations that have not been completely established. As a result, some organizations have been presented in this publication as tentative or incomplete.

Numerous units have had their basic tables of organization and equipment changed, with great differences appearing when compared to the unit descriptions in the 1957 handbook. The new 2/O&E's authorize new weapons and other new items of equipment; however, intelligence reports throughout the year have referred to the replacement program in some units apparently because the Soviets have not completed their replacement program. The organizations, numbers and types of weapons, and listings of equipment presented in this and the following chapter are those which are believed to be the Soviet goal in the GSPG. Most units in the force will follow these tables, but in some instances, the aforementioned differences will appear. An example of this is the antiaircraft regiment that should have thirty 100mm AA guns, but which is still equipped with eighteen 85mm weapons along with twelve of the newer weapons. More 100mm AA guns are expected to replace the 85's, but they have not, as yet, arrived.

It should be considered that the organizational tables presented herein are based on the best available information at the time of printing. Modifications are to be expected, and will be published whenever they are determined and accepted.

CONFIDENTIAL

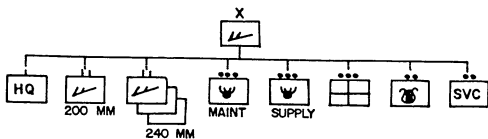

2. ARTILLERY BRIGADES, ARTILLERY DIVISIONS:

There are six different types of brigades in the two artillery divisions. Each type of brigade is tailored for a specific job, which can be recognized in the organization itself. For example, the heavy mortar brigade obviously has a far different mission than does the 122mm gun brigade. The grouping of weapons by type is one of the major remaining examples of Soviet artillery doctrine and its practices. In these units we have a grouping of large numbers of weapons of a specific type, molded into a unit capable of one type of mission, made available to the commander for fire support for a specific purpose. This has long been a cherished concept in the Soviet army.

The six types of brigades and their subordination are as follows: a rocket launcher brigade, a heavy mortar brigade, a light howitzer brigade, and a medium howitzer brigade all in the 6 Arty Div, while the 34th Artillery Division has two 122mm gun brigades and one brigade that is mixed with half 122mm guns and half 152mm gun/howitzers. The organizations and equipment are as follows:

a. Rocket Launcher Brigade, Artillery Division.

The rocket launcher brigade of the 6 Artillery Division is a unique organization, as it is the largest unit made up of this specialized type weapon in modern armies today. With its total of forty-eight large truck-mounted launchers, it is capable of placing nearly fifty tons of high explosives on an area type target in one salvo. With three battalions of 240mm BM-24 launchers, and one battalion of 200mm BM-20's, the unit is capable of both short and long range support missions. There is only one brigade of this type in GSP.

CONFIDENTIAL

CONFIDENTIAL

b. Heavy Mortar Brigade, Artillery Division.

The well-known Soviet Army preference for the mortar is perhaps better portrayed in this organization than in any other. Although the smaller mortars are still found in great numbers throughout the battalions and regiments, of the line divisions, this unit has the largest, most powerful grouping of this versatile support weapon. There are two battalions of twelve 240mm super-heavy mortars, and two like battalions of 160mm heavy mortars. The four battalions could well be allocated to four separate sectors of a front for normal heavy support missions, or they could be held in one location where a tremendous weight of artillery might be needed. With the 160mm firing an 88 pound shell, and the 240 delivering a round of approximately 220 pounds, the total effort of a salvo of one round per gun would be slightly over four tons of high explosives.

UNIT	Officers	Enlisted	TOTAL	240mm Mortar	160mm Mortar	Tracked BM	Trucks

CONFIDENTIAL

CONFIDENTIAL

c. Light Howitzer Brigade, Artillery Division.

The lightest of all support units at GSPU level is the brigade of 122mm howitzers. The capability of the unit must not be overlooked, however, since the brigade of forty-eight howitzers can deliver a greater weight of explosives on the target than can the equivalent number of US 105mm howitzers. The mobility, ease of handling, rate of fire, and nearly all other characteristics are approximately the same as the US weapon, with the major difference being in the 17mm greater size. It is assumed that this unit would be utilized in a general support role where the lighter, faster fire would be needed.

Service Sect	3	65	68			
TOTALS	127	1054	1181	48	8	144

CONFIDENTIAL

d. Medium Howitzer Brigade, Artillery Division.

The second standard type brigade in the 6th Artillery Division is the brigade of forty-eight 152mm howitzers. The general support type mission of this unit should be obvious, and the lack of any inconsistencies in organization or specialized equipment confirms this. The only odd feature in the organization is the use of the current 2-151 truck for a prime mover when tracked prime movers are in use in the light howitzer brigade. This is probably due to a shortage of tracked prime movers, or the availability of a tractor that is of medium size, more commensurate with the weapon.

UNIT	Officers	Enlisted	TOTAL	152mm How	57/76mm Gun	Trucks

TOTALS	127	1054	1181	48	8	144

CONFIDENTIAL

e. 122mm Gun Brigade, Artillery Division.

As mentioned in the paragraph on the artillery divisions (See Chap 4, Par 5, d.), the 34th Artillery Division provides the general heavy, long-range support for GSG. This is accomplished through the use of the conventional 122mm gun and 152mm gun/howitzer. Two of the division's three brigades are composed of four battalions of "corps" guns. The 122mm gun, in three different models, can contribute accurate fire up to a range of approximately 22,000 yards. The brigade would undoubtedly be found in the major artillery elements supporting the primary attack, or as an excellent counter-battery fire unit in a defensive mission. It is to be noted that the four-gun battery is found in this type brigade, as in the heavy mortars, rockets, and howitzer brigades of the 6th Artillery Division.

CONFIDENTIAL

CONFIDENTIAL

f. Mixed Artillery Brigade, Artillery Division.

An unusual, but apparently effective, organization is the mixed brigade made up of two battalions of 122mm guns and two battalions of 152mm gun/howitzers. This brigade has the same structure as the gun brigades with the exception of the inclusion of the 152mm gun/howitzers. The two battalions of three x four-gun batteries of the gun/howitzers add to the versatility of the brigade. With these weapons, capable of both flat and high trajectory fire, the brigade can take on more varied fire support missions. In addition, the 152 has a heavier explosive capability, being the largest weapon present in the GSG conventional artillery, that adds to the importance of this brigade.

3. MOTORIZED RIFLE REGIMENT (172-0, 1555-EM):

The motorized rifle regiment is the Soviet version of the regimental combat team. It is the only regimental size unit that contains organic infantry, armor, artillery, signal, engineer, AAA, and all the necessary supports to make up an organization capable of independent operation under atomic conditions. It is a well-balanced mobile force.

The basic fighting elements are the two motorized rifle battalions, a medium tank battalion, and the regimental artillery, which includes 82mm APAT guns, 120mm mortars, 57mm AA guns, and 107mm recoilless rifles.

* Third battalion may exist in wartime

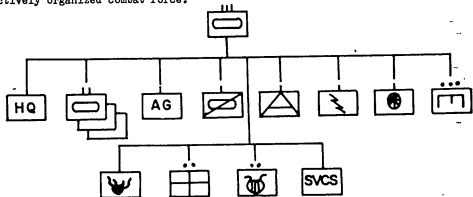

CONFIDENTIAL

CONFIDENTIAL

CONFIDENTIAL

4. MEDIUM TANK REGIMENT (142-0, 884-EM)

The medium tank regiment, with its 94 medium tanks, is the basic fighting unit of the tank division, and the main support force for the motorized rifle division. During the recent reorganization, the three battalions were altered by forming three companies of ten tanks each from the former two companies of sixteen tanks each. The motorized infantry support, long a feature of Soviet tank units, has been dropped in favor of an assault gun company of ten guns. With its normal complement of AAA support, reconnaissance, signal, and services, the tank regiment remains an effectively organized combat force.

UNIT	Officers	Enlisted	TOTAL	Med Tank	Amph Tank	JSU/SU	Twin 57 AA SP	APC's	Punk Btry	Trucks & Sedans

A traffic regulator platoon may also be organic to the regiment. This platoon would be composed of one officer and 38 enlisted men. Equipment would include two APC's, 5 motorcycles, and 5 trucks.

CONFIDENTIAL

CONFIDENTIAL

5. HEAVY TANK REGIMENT, TANK DIVISION (138-0, 761-EM)

One of the major features of the reorganization was the elimination of the heavy-tank/assault-gun regiment from the motorized rifle (mechanized) division, and the shipping of the heavy equipment to the area of the tank divisions. For a time it was believed that the tank division was being given a second HIAG regiment, but a disappearance of a portion of the assault guns and some of the heavy tanks gave rise to the belief that a heavy tank regiment had been formed, with the assault guns being grouped into a separate battalion. The organization, as shown below, is only tentative, and is based on the information that is presently available.

TOTALS	127	774	901	94	6	9	97

CONFIDENTIAL

CONFIDENTIAL

6. ARTILLERY REGIMENT, TANK DIVISION (126-0, 1169-EM)

Artillery support in the tank division has increased steadily from the early organization of twelve 122mm howitzers and thirty-six 120mm mortars until today the division has a full artillery regiment in addition to its rocket launchers and anti-aircraft artillery. The battalion of 152mm howitzers, a battalion of 100mm guns, and two battalions of 122mm howitzers offer far more artillery support than any Soviet tank division organization of the past. With tracked prime movers available for the heavier pieces, the div-artillery has been given a mobility capability that is in line with the breakthrough mission of the division.

7. ARTILLERY REGIMENTS, MOTORIZED RIFLE DIVISION (96-0, 601-EM)

Artillery sightings in the mechanized divisions have been so strong since the reorganization that there is no alternative to accepting two regiments in the division artillery. In addition to the 122mm howitzer, sightings have included the 152mm howitzer, 160mm mortar, 100mm gun, and the 85mm gun. The possibility of replacement of smaller pieces by larger ones has not been overlooked, but the best information available shows the organization to be as stated below.

CONFIDENTIAL

CONFIDENTIAL

8. ANTI-AIRCRAFT ARTILLERY REGIMENT, TANK AND MOTORIZED RIFLE DIVISIONS
(58-O, 486-EK)

The anti-aircraft support for the line divisions has been standardized at regimental size. Each line division commander can now expect to have two medium and four light batteries available for AAA cover. The six batteries of six guns each, show a marked increase over the old organization which had only sixteen 37mm guns and sixteen machine guns. The new automatic 57mm and 100mm guns, which are radar controlled, will give the division far greater AAA support.

Since there are still frequent sightings of the older weapons - the 85mm and the 37mm - it must be accepted that all units have not yet completed the change-over to the newer, heavier weapons. The table of organization and equipment, however, is accepted as indicated below.

9. ANTI-AIRCRAFT ARTILLERY REGIMENT, ANTI-AIRCRAFT ARTILLERY DIVISION

The anti-aircraft artillery division has been enlarged by the addition of one battery to each of its four regiments. Each regiment now has five firing batteries of six weapons each, with the AA machine gun company having been inactivated. Each battery has, in addition to its six weapons, an organic fire control radar, a director, and generator. The 2FU-1's and 2FU-2's that were organic to the AA machine gun company have now been given to the firing batteries on a basis of one per battery.

10. ROCKET LAUNCHER BATTALION, TANK DIVISION (23-0, 209-EM)

The three rocket batteries of this battalion provide the additional artillery fire support needed by the tank division. The twelve weapons, with twelve rockets each, can place a tremendous volume of fire on an area-type target, greatly adding to the fire of the artillery regiment. It is to be noted that the unit in the tank division is equipped with 240mm rockets, while the same supporting unit in the mechanized division has the sixteen-round, 140mm size.

CONFIDENTIAL

11. ROCKET LAUNCHER BATTALION, MOTORIZED RIFLE DIVISION (23-0, 257-EM)

The rocket launcher battalion of the motorized rifle division, like the same unit in the tank division, has three rocket batteries. However, the organization of this unit provides batteries of six weapons rather than those of four in the tank division. This organization is probably due to the different nature of the organization of the motorized rifle unit, with the three motorized rifle regiments needing more individual support in independent operations. The supporting units are the same for both battalions.

12. RECONNAISSANCE BATTALION, TANK DIVISION (32-O, 336-RM)

The reconnaissance battalion of the tank division follows US reconnaissance company organization to a degree, in that it has an armored element, scout sections, armored infantry section, and other support. The unit is organized around a tank company of ten medium tanks and five amphibious tanks. The infantry is armored carrier mounted, and twenty-two motorcycles provide speedy messenger and scout service. The unit is not too powerful, and according to Soviet doctrine is not to attempt to fight any large force. It would rather report and by-pass unless the opposition is so obviously weak that it can be easily overcome.

UNIT	Officers	Enlisted	TOTAL	Med Tanks	Amph Tanks	APC's	AA MG's	Trucks	Motorcycles	Tank Recvy	Amph Carriers

CONFIDENTIAL

CONFIDENTIAL

13. RECONNAISSANCE COMPANY, MOTORIZED RIFLE DIVISION (6-O, 65-EM)

Recently received information indicates that the motorized rifle division may have reduced its reconnaissance battalion to a company sized unit with no medium tanks. Apparently, it is believed by the Soviets that the motorized rifle regiments can supply their own reconnaissance elements. The remaining troops are organized into a HQ section, amphibious tank platoon, and infantry platoon. The resultant drop in fighting power is obvious.

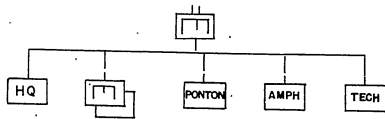

If this unit exists as described, its equipment would probably include five amphibious tanks, four armored personnel carriers, and two general purpose trucks.

CONFIDENTIAL

CONFIDENTIAL

14. SAPPER BATTALION, TANK AND MOTORIZED RIFLE DIVISIONS (30-O, 350-M):

Each line division has an organic engineer component that is able to provide a short ponton bridge, a small dry-gap bridge, and many of the normal engineer services required by a mobile force in combat. Although requiring assistance from Army or GSP in a major crossing effort, these sapper battalions are considered adequate for most normal engineer requirements.

* Truck strengths are estimated.
 Personnel strengths for each unit are unknown.

CONFIDENTIAL

CONFIDENTIAL

15. SIGNAL BATTALION, TANK AND MOTORIZED RIFLE DIVISIONS (28-O, 143-EM):

Signal communications within the headquarters, and from division headquarters to subordinate elements, are provided by the divisional signal battalion. Although small by US standards, and operating at a level considered to be about the same as its US counterpart during the early days of World War II, it is nevertheless a great improvement in the Soviet army over the messenger, pigeon, panel, and rocket flare days of ten to fifteen years ago. The steady, although slow, progress made by the Soviets in line division communications has been notable.

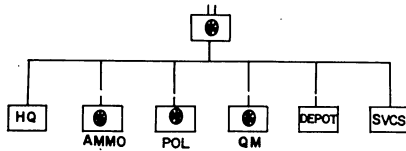

In addition to the radios, telephones, and other items of signal equipment in the signal battalion of the line divisions, there are an estimated fifteen trucks and five motorcycles. Exact distribution of the equipment is unknown.

CONFIDENTIAL

CONFIDENTIAL

16. MOTOR TRANSPORT BATTALION, TANK AND MOTORIZED RIFLE DIVISIONS (24-0, 140-EM):

Another Soviet unit which has been growing steadily over the past few years is the motor transport battalion in each of the line divisions. With the relatively small number of vehicles available in the line battalions and regiments, the motor transport battalion of the division assumes a greater importance to the Soviet division than would the same type unit in the US structure. The battalion is organized to effect the most efficient operation for the accomplishment of its mission, with separate companies for transporting POL, ammunition, and quartermaster-type supplies.

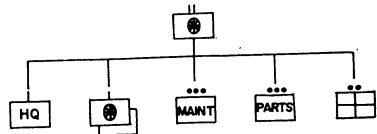

The exact amount of equipment organic to the battalion is unknown. The 124 trucks will undoubtedly be allocated to the companies in such a manner as to provide maximum support for POL and ammunition.

CONFIDENTIAL

CONFIDENTIAL

17. MOTOR TRANSPORT BATTALION, ARTILLERY DIVISION (30-0, 270-EM):

The artillery division, with its heavy requirement for the transport of heavy artillery ammunition and POL for its trucks and prime movers, has been given a transport unit that is larger than those in the line divisions. With nearly twice as many personnel and fifty per-cent more trucks, the motor transport battalion of the artillery division should be adequate for the requirements of this type division.

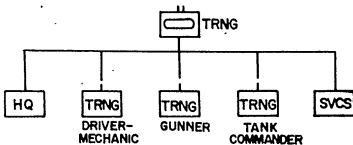

The disposition of the 198 organic trucks of the battalion is not known. There may be two motorcycles for messenger and traffic control purposes.

CONFIDENTIAL

CONFIDENTIAL

18. TANK TRAINING BATTALION (71-Cadre, 270-Students)

Since most of the replacements received in the GSFG have had little, if any, training in the homeland, it is the responsibility of the units to which they are assigned to train them for the positions they must fill. One means of accomplishing this is the use of the tank training battalion within the line division. The best information available on the organization of this unit indicates that there are training units, probably companies, for tank driver-mechanics, for gunners, and for tank commanders. The course is of nine months duration and apparently achieves the results expected in the US Army at the end of individual advanced training. The man, after this course, should be ready to fit into the line crew at the position for which trained.

The personnel strength in the tank training battalions will vary from one division to another. Generally, the unit will have approximately 70 cadre personnel, and it is believed the battalion is capable of handling 90 students per company, or 270 students. Equipment also varies, and may be drawn from division units rather than being organic to the battalion. An average tank training battalion will have the following vehicles for training purposes:

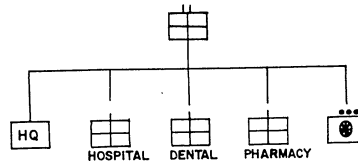

- 8-10 T-34 Tanks
- 2-4 T-54 Tanks
- 1-2 JS-3 Tanks
- 2-4 JS-2 Tanks
- 1 Amphibious Tank
- 2-6 SU or JSU Assault Guns
- 1-6 BTR Armored Personnel Carriers

CONFIDENTIAL

CONFIDENTIAL

19. MEDICAL BATTALION, TANK AND MOTORIZED RIFLE DIVISIONS (29-C, #2-2k):

The medical battalion of the line divisions, which is only one-third the size of the comparable US unit, apparently has a mission similar to a rear area medical installation in the US forces. Helicopter evacuation to an army level hospital has not yet been observed in Soviet forces, and this may account for the need for a "Hospital Company" at line division level. The dental and pharmacy units may fit into the US Army Dispensary concept, while the motor transport element undoubtedly includes the available ambulance service.

The exact breakdown of the personnel and equipment in the medical battalions is unknown; however, the totals are as follows:

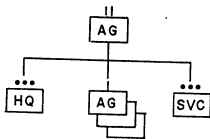

Officers	29
Enlisted Men	82
Trucks and Ambulances	14

CONFIDENTIAL

CONFIDENTIAL

20. ASSAULT GUN BATTALION, TANK DIVISION (25-0, 191-EM)

One additional development coming out of the reorganization of the GSPG in 1957 was the formation of a separate assault gun battalion in the tank division. This battalion, somewhat larger than the battalions of the former EAD regiments, is the first of its type to appear in an independent status within an armored type division. The size of the unit has been increased from the former 21 guns to the same organization as the conventional tank battalions, and is now believed to hold 31 heavy assault guns of either 122mm or 152mm size.

Chapter 6
MINOR UNIT ORGANIZATION (NON-DIVISIONAL)

1. GENERAL:

The units of less than division size that are not organic to some type of division are those directly subordinate to the armies or to Hq GSPG. These units may also be referred to as "Army Troops" and "HQ Units"; however, for the purpose of this handbook they will be designated as "non-divisional" units as opposed to those that are "divisional".

Non-divisional units may be tactical combat elements or support and service types. Generally they are found to be in the latter category, with engineer, signal, transport and supply, guard, and similar units predominating. The combat units are also more of the support type, with army artillery units as the major group of elements being considered.

It should be noted that over the past two years there has been a decided drop in the number of non-divisional combat units. Such organizations as rifle army heavy-tank/assault-gun regiments, army artillery brigade, antitank brigades, etc., have been inactivated. This accounts, in part, for the preponderance of service and support-type units in the non-divisional class.

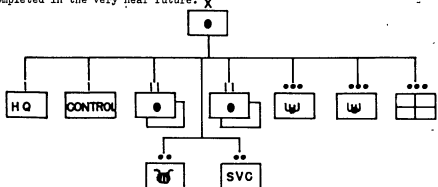

CONFIDENTIAL

CONFIDENTIAL

2. ARTILLERY BRIGADE, TANK AND COMBINED ARMS DIVISIONS (151-0, 1070-24):

The heavy support fire at Army level is supplied by the brigade of artillery found in each Army. This brigade of four battalions, with its total of seventy-two medium-to-heavy weapons, is capable of delivering a great volume of support fire either in four separate sectors or in a mass fire mission. The Army artillery officer may be called upon to lend the weight of the entire brigade to one division's sector of the line, or he may develop his fire plan with the four battalions acting in a normal support role.

The use of two different weapons gives the brigade a greater degree of flexibility than was present in the World War II brigades that were generally composed of one type of weapon only. At present, the brigades of the Tank armies have been converted from 152mm howitzers and 100mm guns to 152mm gun/howitzers and 122mm guns. The same conversion has been initiated in the brigades of the Combined Arms armies, and should be completed in the very near future. X

3. ANTI-TANK BRIGADE, GSPG (225-0, 1500-EM):

Two of the specialized units under direct control of the GSPG artillery commander are the antitank brigades. These units, tailored to give high-velocity direct antitank fire, are composed of six firing battalions of twelve weapons each. The seventy-two weapons are arranged in batteries of four pieces each. It is assumed that these units, which are located in the northern plains area, would be used in the areas of a front that are considered the best avenues of approach for enemy armor, with the control held at GSPG level.

CONFIDENTIAL

CONFIDENTIAL

4. ROCKET LAUNCHER REGIMENT, TANK AND COMBINED ARMS ARMY (85-O, 659-EM)

Heavy area-type fire in support of the tank and combined arms armies is provided by the army rocket launcher regiment. The three battalions of rockets, each of a different type, gives the brigade a well balanced armament for a varied support role. Recent reports indicate that these units may be receiving the 240mm rocket on the full-tracked prime mover chassis M-1954, which, if true, will increase the mobility of the units.

TOTALS	85	659	744	12	12	18	132

CONFIDENTIAL

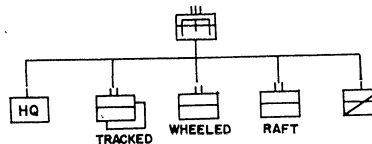

CONFIDENTIAL

5. ENGINEER REGIMENTS, GSPG AND ARMIES:

The GSPG has in its organization several specialized engineer units for the many distinctive tasks that must be performed that are beyond the scope and capabilities of the sapper battalions within the line divisions. Also, each army has its own ponton bridge regiment for the larger river crossings that cannot be supported by the sapper battalions. With the increase in emphasis on the river crossings, the large amphibious regiments and the ponton regiments take on added importance. They are receiving increased training, and may be expected to be present in practically all major exercises.

a. The Amphibious Regiment (GHEU) (500-O & EM)

The Amphibious Regiment in the GSPG, of which there are two, has two battalions of fully tracked amphibious carriers, one of wheeled amphibians, and a rafting battalion capable of building four large rafts for the ferrying of tanks and other heavy equipment prior to the completion of the building of a bridge. The carriers will ferry troops and lighter equipment on a shuttle basis, both before and after the completion of the bridging operation.

TOTALS	600*	58	32	8	40*

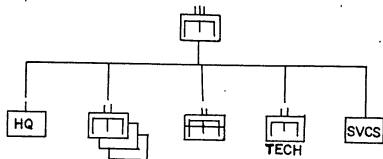

* The breakdown of personnel strength and the distribution of the approximately 40 trucks is unknown.

CONFIDENTIAL

CONFIDENTIAL

b. Engineer Regiment, GSFG (2000-0 & EM).

One engineer regiment, directly subordinate to GSFG, has the characteristics of a general support heavy engineer unit. In this regiment are found the heavy items of construction equipment, such as graders, rollers, power shovels, cranes, and the other pieces necessary to the rear area heavy construction work required by every modern army. The regiment also appears to have some amphibious or bridging capability, but its obvious specialty is the heavy field-type engineering. This unit has been noted experimenting with pre-fabricated concrete underground structures in recent weeks.

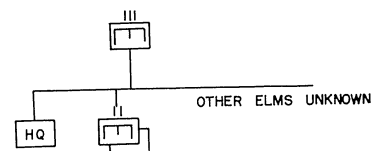

Items of equipment found in this regiment include the following:

1 x Bridge RM-4	4 x Ditch Diggers
48 x TBP (Sec)	7 x Scrapers
4 x Amphibians, Tracked	5 x Graders
20 x Amphibians, 3 Axle	4 x Concrete Mixers
10 x Amphibians, 2 Axle	4 x Air Compressors
10 x Power Boats	4 x Pile Drivers
7 x Power Boats	2 x Road Rollers
200 x Trucks, Cargo	4 x Sheepfoot Rollers
15 x Tractors/Bulldozers	2 x Rock Crushers
5 x Cranes	2 x Saw Mills
6 x Power Shovels	4 x Tanks w/line Rollers
	7 x Generators

CONFIDENTIAL**CONFIDENTIAL**

c. Engineer Ponton Regiment, GSFG and Army (600-0 & EM).

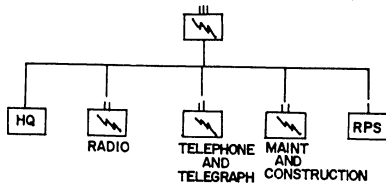

The units responsible for the construction of sufficient temporary bridging to move the large mechanized forces of the GSFG across any water barrier that is beyond the capability of organic sappers are the Engineer Ponton Regiments. These organizations, found at GSFG and in each army, are capable of providing over 600 feet of sixty-six ton floating bridge. Each of the two battalions in the regiment has forty-eight TBP or TFP pontons, and the regiment has the necessary power boats, bridge decking, cranes, and other items of engineering equipment for the completion of the task.

**CONFIDENTIAL**

CONFIDENTIAL

6. SIGNAL REGIMENTS, GSGF AND ARMIES (450-O & EM):

The complex mission of providing radio and wire communications for the GSGF headquarters, and within the army structure, is performed by the signal regiment. Two of those regiments are required to accomplish the mission for GSGF, while each army has one. Three of the battalions of the regiment have obvious missions, those of radio communications, telephone and telegraph, and the maintenance and construction tasks. However, the mission of the RPS company is somewhat obscure, in that the initials RPS do not stand for anything obvious or apparent. This company operates the classified document message center and courier service in the field, and also controls classified documents. The regimental school trains signalmen of subordinate units as well as its own personnel.

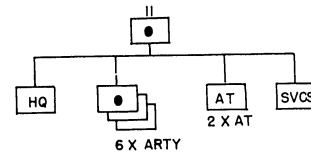

CONFIDENTIAL

CONFIDENTIAL

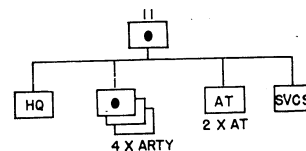

7. ARTILLERY BATTALIONS, ARTILLERY BRIGADES:

Two distinct types of artillery battalions have emerged from the reorganization of the units in the GSGF. The different types of battalions are found in the brigades subordinate to the armies and those subordinate to the artillery divisions and the GSGF (antitank).

a. The army artillery brigade has battalions that are organized similar to the battalions in the line divisions' artillery units. The batteries have six pieces each, but with three batteries still included in the battalion structure. This increase in battalion strength has not been reflected in brigade strength, since the old brigade organization called for two regiments of three twelve-gun battalions, with the same total of seventy-two pieces per brigade. The battalions are also provided with close-in antitank protection in the form of two antitank guns of 45mm, 57mm, 76mm or 85mm size. It is assumed that these weapons are a part of the battalion headquarters.

b. The battalions found in the brigades of the artillery divisions and in the GSGF antitank artillery brigades are still organized into four gun batteries. With the reduction to four battalions per brigade, the artillery division has lost approximately two-thirds of its former estimated strength. There has been no apparent reduction in the number of battalions in the antitank brigades, therefore the six twelve gun battalions are still accepted in these units. Local antitank protection has been provided for the battalions of the artillery divisions as well as for those described above.

CONFIDENTIAL

NOTES

CONFIDENTIAL

CHAPTER 7
WEAPONS AND EQUIPMENT

1. GENERAL:

The OSFG has been the recipient of several new, modern weapons in the past few years. There has been a trend of "up-gunning" in caliber as well as numbers of weapons. New tanks have arrived in addition to artillery pieces and AAA weapons of improved design. The field of transport has been given much consideration by the Soviets, and many new trucks, amphibious vehicles, and tracked prime movers have been added to the units.

Soviet basic infantry weapons have also come in for their share of modernization. New automatic weapons, antitank weapons, and light artillery for the infantry-type units have been received. The infantry has also been given increased mobility with armored personnel carriers that have been arriving over the past three years.

2. INFANTRY WEAPONS:

a. Small arms.

- (1) Pistols, carbines, rifles, and sub-machine guns:

The standard weapons and equipment identification handbooks are adequate for the identification of most of the individual weapons in the OSFG. The exceptions are:

- (a) The 7.62mm sub-machine gun, Kalashnikov (AK), which is the latest of a long line of Soviet SKG's.
- (b) The 7.62mm semi-automatic carbine, Siminov (SKS), which is the successor to the M-1944 standard carbine.

- (2) Machine guns:

A replacement for the Company Light Machine Gun, M-1946 has been introduced. The light machine gun RFD has been observed in limited numbers, and should gradually replace the old models. It must be noted, however, that even the DP and DPM (often considered obsolete) are still in limited use.

b. Rocket and recoilless weapons.

The OSFG is well equipped with infantry antitank and antipersonnel rocket and recoilless type weapons. These weapons, which operate on the same general principle and under the same tactical doctrine as our own, are distributed in such a manner as to provide antitank protection at the rifle squad level, in the battalion artillery, and in the regimental artillery element.

- (1) The RPG-2, infantry AT grenade launcher is similar to the famed German "Panzerfaust" of World War II.
- (2) The SPG-82 is a rocket-type launcher similar to the US "Bazooka", but fired from a tripod and towed by hand on small wheels.
- (3) The 82mm Recoilless AT gun, B-10 is quite like the US 76mm Recoilless rifle, but also has small wheels for towing by the crew.
- (4) The regimental artillery holds the B-11, a 107mm recoilless rifle.

CONFIDENTIAL

CONFIDENTIAL**c. Mortars.**

The Soviet army has not given up its preference for an abundance of mortar support for infantry units. In addition to the heavy mortars (See par 4a(7)), the infantry battalion is still equipped with the 82mm "battalion" or "infantry" mortar. This mortar may be one of three models; the 1937, 1941, or 1943.

3. ARMORED VEHICLES:**a. Medium tanks.**

The famous workhorse of Soviet armor, the T-34/85 medium tank, has finally given way to the T-54/100 as the backbone of GSPG armored units. Although approximately 2000 T-34's are still on hand in the GSPG, the bulk of the 5000 medium tanks are now T-54's. Nearly all tank regiments of the tank divisions are T-54 equipped, while the T-34's are found in most motorized rifle regiments. A few of the interim-model T-44's are observed from time to time, but the numbers present are considered to be insignificant.

b. Heavy tanks.

The JS-3 continues to dominate the heavy tank picture in the Soviet forces in Germany. The T-10, which is the long-awaited replacement for the World War II JS models, has been observed in the zone, but is believed to be there only in quite limited numbers. No more than thirty have been reported as imported into the zone, and only three have actually been seen. JS-2's account for approximately 30-40% of the heavy tank strength.

c. Amphibious tanks.

The PT-76 amphibious tank, mounting a 76mm gun, has been accepted in all motorized rifle and medium tank regiments. In addition, there are five of these versatile vehicles in the reconnaissance units of the divisions.

d. Self-propelled assault guns.

The three most numerous types of these assault weapons are still the SU-100, the JSU-122, and the JSU-152. Although rumors have had several newer models in the zone, these have never been observed by reliable sources. Tank divisions continue to hold the largest numbers of these weapons, with a large drop in the motorized rifle divisions since the inactivation of the heavy-tank assault-gun regiments of these divisions.

e. Armored cars.

With the exception of the armored personnel carriers (See par 6e), the armored car, such as the BA-64, appears to be vanishing from current GSPG units. With the introduction of newer fighting vehicles, especially in the amphibious line, the armored car loses its position in the Soviet scheme. The extremely light armor and armament do not fit into the concept of the armored unit in nuclear-type warfare.

f. Antiaircraft tank.

A new weapon in the zone is the ZSU-57-2, a modified T-54 tank chassis with a large, square turret mounting twin 57mm antiaircraft guns. The weapon appears to have an elevation from 0 to approximately 90°. These vehicles have been observed in medium tank regiments, and will probably replace the 37mm towed weapons.

CONFIDENTIAL**CONFIDENTIAL****4. ARTILLERY AND ANTI-AIRCRAFT ARTILLERY.****a. Standard field and antitank artillery.**

- (1) 45mm, 57mm, and 76mm guns.

These old standard pieces are still observed in numbers in GSPG, but are also observed from time to time in export shipments. It has been accepted that these weapons will be replaced by more modern pieces, such as the recoilless and rocket types for the 45mm and the 57mm, and that the 76mm would give way to the 85mm divisional gun. In many instances the 76mm gun has been replaced by the 85mm APAR (auxiliary-propelled, antitank) in the regimental artillery.

- (2) 85mm guns.

The standard M-1945 model of the 85mm divisional gun is observed in significant numbers throughout the zone. It is found in regimental artillery as well as in battalion strength (18 pieces) in some of the divisions' div-art'y.

This same weapon has been modified to take a small engine on one trail, equipped with a castor-type wheel under the trails with steering equipment, and a live axle under the carriage, enabling the weapon to move for short distances under its own power. It is easily recognized by the steering wheel and engine group on the trails.

- (3) 100mm guns.

The M-1944 model of the 100mm gun is still present in large numbers in the zone, and has also been joined by the M-1955 version of this long-barrelled antitank/field gun. The two may be distinguished by the carriage, since the older model employs a dual-wheeled carriage while the new weapon has only single wheels. The 1955 gun appears to be somewhat longer, and has a lighter and slimmer appearance. These weapons are found in the antitank artillery brigades and in several of the div-art'y units. It is the logical replacement for the 85mm gun in the Soviet overall plan of "up-gunning" nearly all artillery units.

- (4) 122mm guns.

There are three versions of this "corps" weapon presently available to the GSPG artillerymen. The model in the most widespread use is the 1931/37, which gained the title "Corps Gun" during World War II, due to its use in the rifle corps artillery support. It is gradually being replaced in the GSPG by two newer models, the M-1954 and the M-1955. Both have been observed in the Army artillery brigades in recent months, and are apparently entering the zone in increasing numbers.

An interesting note on the M-1954 is the possibility that this weapon is actually a towed version of an old Soviet 150mm naval gun. This would, of course, remove the weapon from the 122mm classification, but it is observed in the units occupying the normal position for the 122.

- (5) Howitzers.

The task of light and medium high trajectory fire support is carried out by two old model howitzers, the 122mm and the 152mm. There is only one 122mm howitzer, the M-1938, while there are two 152's currently in use in the GSPG. These are the 1943 modification of the standard 1938 152mm howitzer, and an entirely new model first observed in the 1955 Moscow parade. These are all seen in the artillery division, and in the division artillery units as well. Some of the army artillery brigades still have the 152mm howitzer.

CONFIDENTIAL

CONFIDENTIAL

(6) Gun/howitzer.

The 152mm gun/howitzer, long a favorite of the Soviets in the medium-heavy artillery, is the heaviest artillery piece present in the GSFG today. It is found in the artillery divisions and in the army artillery brigades. Its very familiar multi-baffle muzzle brake and vertical equilibrators will be sighted wherever the GSFG has need for the extra heavy artillery punch.

(7) Mortars.

The Soviets have always considered all mortars of greater than 82mm in size as artillery. They have provided the GSFG with a wealth of 120mm, 160mm, and the super-heavy 240mm. The 120mm are found in regimental support; the 160mm in division artillery; and the 240mm is the principal weapon in the heavy mortar brigade of the 6th Artillery Division.

(8) Rocket Launchers.

The "Skalin Organ", as the rocket launcher has been termed by the Soviets, still holds a prominent place in the Soviet artillery arm. The GSFG is liberally equipped with the 132mm, its replacement the 140mm, the four-round 200mm, the 300mm, and its replacement the 240mm. These mass-fire weapons are found in all divisions and in separate units at army and GSFG level.

b. Antiaircraft artillery.

(1) Old Standard Weapons.

The 37mm light antiaircraft gun has seen service with the Soviet forces since 1939, and is still present in the GSFG although now in the process of being replaced. It is generally found in the regimental antiaircraft units, with the exception of the light regiments that were a part of the antiaircraft artillery divisions. These divisional units are rapidly being replaced by the newer 57mm, but the 37 is still sighted in small numbers. Exports of this weapon have been quite high in recent months.

The 85mm has been the standard medium piece in the GSFG for many years. It too is being replaced, but the program has been slow in operation and leaves many of these in nearly all line divisions and some in the antiaircraft artillery divisions. Its complete replacement is expected.

(2) New antiaircraft artillery guns.

In line with the Soviet program of re-equipping and rearming the GSFG, two new antiaircraft weapons have come to play a dominant part in that program. The aforementioned 57mm automatic and radar controlled is the logical replacement for the light 37mm, and has been accepted in nearly all units that have had the 37mm in the past. The 100mm, also radar controlled, is the replacement for the obsolescent 85mm, and is probably considered the Soviet answer to the US 90mm. This weapon is found in all AAA divisions, and there are a few indications that it may appear in the AAA regiment of the line divisions, although this has not yet been established.

(3) Antiaircraft machine guns.

(a) 12.7mm.

The 12.7mm heavy antiaircraft machine gun, although obsolete, has not been completely replaced. This 1938 weapon, similar to the US .50 cal., is still observed in many units in the GSFG.

CONFIDENTIAL**CONFIDENTIAL**

(b) 14.5mm.

The replacement for the aging 12.7mm is the 14.5mm heavy antiaircraft machine gun. This weapon has been produced in three models: the single weapon, mounted on vehicles such as trucks and scout cars; the ZPU-2, a twin weapon mounted on a trailed single axle carriage, and in some BTR-152 APC's; and the ZPU-4, a four-barrelled trailed weapon mounted on a two-axle carriage. The multi-barrelled weapons, with their approximate .58 caliber, provide reasonable protection against low-flying aircraft.

5. ENGINEER, SIGNAL, AND CHEMICAL EQUIPMENT.

Some of the greatest progress in the Soviet military re-equipment program has been made in the field of technical support. Soviet engineers have become more numerous and better equipped, and are demonstrating more advanced techniques. Signal equipment has progressed from a few lend-lease items to an imposing array of highly technical equipment found at all echelons. The chemical branch has been observed in an increasingly important role in the tactical exercises of the GSFG over the past few years. Some of the major advances are as follows:

a. Engineer equipment:

(1) Pontons.

The engineer bridging ponton has probably been the most notable of all items of engineer equipment over the past several years. This is based on both numbers sighted and the wide use of the ponton. There have been hundreds added to the GSFG equipment count over the past four years, and they have been observed in use in the building of rafts and ferries capable of floating medium tanks, as well as in the normal bridging mission. Several types are in current use, and these are well described in current equipment handbooks.

(2) Motor launches.

The motor launch and other types of power boats have also made an increasingly important showing in the GSFG engineer units. They are used for pushing or towing rafts and ferries, positioning ponton sections, and other normal bridging functions. The BMK-70 and BMK-90 are the models most often seen. There are several variations of motor-cars, outboard motors, etc., that contribute to the over-all river crossing capability of the Soviet engineer units.

(3) Miscellaneous bridging material.

Several additional items of bridging material must also be mentioned. There are, of course, sections of prefabricated bridges, and some units are equipped with a bridge similar to the US Bailey type. There are large numbers of trucks observed moving with bridge timbers, logs, flooring, large flotation drums, and the many other items of miscellaneous equipment that are necessary to build a modern military bridge.

(4) Earth moving equipment.

There has been a definite increase in the numbers of bull-dozers, graders, scrapers, plows, and other types of earth-movers in the GSFG engineer units. Other specialized, related equipment such as mixers, spreaders, rollers and the like are seen more and more often.

CONFIDENTIAL

CONFIDENTIAL

(5) Mine dispensing trailer.

There are two apparently new mine dispensing trailers in use in the GSFG. One model is nothing more than a trailed axle supporting two wooden slides that allow a crew in a truck to slide mines down to the ground for planting by foot troops. The other is a mechanical type, also towed by a truck carrying mines, that off-loads the mines at pre-set spacing, and may possibly plow a small trench for burial of the mines as well.

(6) Amphibious vehicles.

Three new amphibious vehicles have joined the Soviet engineers to add to the mobility of these units in the river crossing. These are a 4 x 4 jeep-type, a 6 x 6 carrier resembling the US DUKW, and a fully-tracked vehicle of approximately the same 2½-ton size. These amphibious carriers, found in the amphibious regiments and other large engineer units, provide the engineers with a rapid means for ferrying the fighting units and much of their equipment, as well as giving them a faster means of getting bridging personnel to the far side of the stream for construction work on both sides at the same time. In the assault crossing, many more troops can be taken across the river than can be accommodated by two or three bridges. An additional armored amphibious carrier has been added, and is discussed under armored personnel carriers, par 6c.

b. Signal Equipment.

The greatest strides made by the Soviets in the field of signal equipment lies in the numbers of fire control and other types of radar. Radios and telephones appear in greater numbers than ever before, with the distinct possibility that each tank now has its own radio (in World War II, there was one per company, and afterward, one per platoon), and the infantry soldier is seen with more and more pack radios. More signalmen are observed stringing wire with every field exercise; radio and telephone vans are becoming more numerous; and headquarters units are participating in more frequent CPX's fully supported by signal.

A complete discussion of electronic equipment is contained in the USAFE publications "Electronic Order of Battle" and "Identification Guide, Soviet Electronic Equipment". Practically all of the equipment described in these publications have been observed in the GSFG.

c. Chemical equipment.

In addition to the normal role of the chemical branch, which is that of providing smoke pots, decontamination units, etc., the Soviet units in East Germany are receiving a great deal of other support from their chemical troops. Many exercises are observed in which the gas mask plays an important part. Protective clothing in the form of boots, capes, aprons, and the like are seen in many stages of training. CER training plays an important part in the regular training cycle of the forces of the GSFG. Technical intelligence detachments are kept busy assessing the value of new gas masks and other chemical items that are appearing in the GSFG.

6. MOTOR TRANSPORTATION.

If any single item can be mentioned as the one great improvement in the Soviet army of the postwar years, it would be the motor transport of the army.

CONFIDENTIAL**SECRET**

Probably no other field has received so much attention from Soviet planners. The GSFG has been put on more "wheels" of better quality than any Soviet force of comparable size could have hoped for during the World War II period. The GSFG has moved from the position of having a few scattered trucks of the Model '47 Ford type and lend-lease Studebakers to a highly mobile force with a good family of cargo and special purpose vehicles quite comparable to our own.

a. General purpose trucks.

Soviet general purpose trucks include a full family of vehicles ranging from the Gaz 67B copy of the US World War II jeep, through sizes comparable to US 1½-ton, 2½-ton, 5-ton, and most sizes in between. Several models have been adapted to special purposes, (other than the signal and ordnance types which follow) such as crane trucks, POL tankers, ponton carriers, etc.

One significant fact must be remembered when discussing Soviet cargo trucks—that is, an assigned tonnage capacity need not necessarily mean that the truck is capable of carrying that specific tonnage under all conditions. As has been noted in the case of US trucks, the old GMC 2½-ton has been known to haul eight tons efficiently in all types of terrain. A 1½-ton US truck, converted to civilian dump-truck use, may carry five tons of stone daily; however, the rating remains 2½-ton and 1½-ton respectively. The Soviet trucks, on the other hand, have been known to be greatly underpowered for the tonnage rating assigned to them. Therefore, a 5-ton rated Zis 151, which appears to be the same size as our 2½-ton truck, may be expected to overheat and give trouble if loaded too heavily in hilly or mountainous country. This has been especially true of the Z-150.

b. Signal vans.

Along with the increase in the amount of standard signal equipment mentioned in par 5, there has been a corresponding increase in the number of signal vans. The number of vans, and the number of different types, has been so great that there are at least fifty different models of vans, with variations of these up to a possible 200. All sizes and models of trucks have been observed with some sort of van body, with antennae of different types attached. Many jeeps (Gaz 67B) and command cars (Gaz 69) are seen escorting or leading convoys and bearing radio antennae. The Gaz 51 is noted in several types of van bodies, as is the Zis 151. Even the gigantic Horsch truck of German manufacture has been observed fitted out as a signal van.

A complete identification guide is anticipated in the near future, and this should serve to point up the many different models.

c. Ordnance vans.

Various types of ordnance vans and shop trucks have been observed on several different truck bodies. The Zis 151 is the most popular model of truck for this purpose, probably due to its size; but even the ancient Zis 5 has been observed in use as an ordnance shop truck. These vehicles, as in the case of the signal van, are found at nearly all echelons.

d. Miscellaneous trucks.

The aforementioned crane trucks, POL tankers, ponton carriers, and other specialized trucks are all merely modifications of standard trucks. Some chassis have been used for ambulances, command cars, command post vehicles, and many other specialties. Apparently the Soviets have merely taken the available vehicle and modified it to fit a specific requirement—much as we have done in our own army.

SECRET

SECRET

e. Armored personnel carriers.

One of the major developments in the Soviet transportation field during the past four years is the development of a series of transport vehicles for the infantry units of tank and motorized rifle organizations. For years, the Soviet mechanized infantryman rode into combat or exercises on the tank with which he worked, or was transported part of the way by truck. 1954 saw the beginning of the import of approximately 1500 armored carriers. These are of two distinct models, both of which are wheeled. One is the ETR-152, a 6x6 armored truck bearing a strong resemblance to the US Half-track, and the other is a smaller model, designated the ETR-40, which is quite similar to the old US White Scout Car, M-3. A modification of the ETR-152, with a high, completely armored top has also been observed. This has been determined to be a command-type vehicle, with communications facilities and probable space for a small staff to function.

A great step forward has been the inclusion of a new amphibious armored personnel carrier, built on the chassis of the amphibious tank. This vehicle is the first truly armored carrier that can be considered a complement to the armored forces. Although it has only been seen in parades with no overhead cover, a definite possibility exists that there is a removable cover which would furnish the complete armor protection required by true armored infantry.

f. Tracked prime movers.

The Soviets have been attempting to build a satisfactory tracked prime mover for the heavier artillery pieces for many years. Most of their efforts have been to develop this vehicle from the heavy farm tractor or caterpillar-doser type. In fact, many an artillery piece has had the S-80 or S-65, both true engineer tractors, as its prime mover even through the year 1957. The extremely slow speed of this type tractor is an obvious contributing factor to the efficiency of the unit. Since 1956, however, there has been a distinct increase in the progress of the Soviet artillery arm in the prime mover field. Several new models have been added to the basic YA-12 and YA-13 series, which have been the standard prime movers for several years. These tractors range from very light to very heavy, and are found in many units throughout the zone. Chief among these are: the YA-14, the modified YA-14, and the M-2, all of which are light prime movers; the M-1954 which is a medium-heavy prime mover; the M-1950, which is a very heavy tractor built on the T-34 tank chassis; and a light, armored tracked prime mover seen pulling the 100mm AT gun in an antitank artillery brigade.

There is one puzzling factor in the consideration of the prime movers in the GSFG. That is, apparently no one prime mover has one particular type of weapon to tow. The 57mm AA gun, for instance, has been sighted with at least four different tractors. In some units an artillery brigade for example there may be three different types of prime movers pulling the same type weapon. At present, there is no explanation for this procedure.

SECRET**CONFIDENTIAL**

CHAPTER 8

UNIFORMS AND INSIGNIA

1. GENERAL:

This chapter consists of information, tables, and drawings to aid in the identification of Soviet Army personnel through recognition of uniforms and insignia. The information available has been divided into four sections:

- a. Uniforms.
- b. Insignia of rank.
- c. Branch or arm of service.
 - (1) Shoulderboards.
 - (2) Collar ornamentation.
 - (3) Arm and service insignia.
- d. Special insignia.

2. UNIFORMS:

In general, the information contained in Chapter 9, DA Pamphlet 30-50-1 is complete and current. Since this publication is in widespread distribution, this Handbook will not duplicate the information available on the standard uniforms, but will be restricted to significant changes that have taken place since the printing of the above Pamphlet.

a. Dress uniforms.

The Soviet dress uniform, as described in paragraphs 294 and 295 of the cited pamphlet, is practically unknown in the day-to-day operations of the GSFG. A few officers are occasionally seen in dress uniform after duty hours, but are practically never seen in dress with troop units. Some enlisted dress uniforms are observed in the elite units in the special Berlin guards, but the average GSFG soldier will seldom have an opportunity to appear in "full dress". Because of this, the dress uniforms will not be discussed in this chapter.

b. Service uniforms.

The normal off-duty uniform for officers in the GSFG is the familiar single-breasted coat with high, stand-up collar; service cap, with appropriately colored cap band and piping; trousers or breeches, either the same CD color as the blouse, or blue; and either boots or shoes. As a dress touch, the officer may wear the "Sea Brown" belt. The summer service uniform, featuring the white blouse and white-topped service cap, is not seen in the GSFG. Enlisted men in the GSFG will be seen on parade and other formal occasions with the regular field uniform plus dress shoulderboards, blue breeches, and the service hat. It is a custom, however, that the draftee does not have the privilege of wearing the blue breeches and visored cap, as this is reserved for the regular army man.

c. Field uniforms.

The most frequently seen uniform in the GSFG is the field uniform,

CONFIDENTIAL

63

CONFIDENTIAL

and few changes have been made over the years in this basic uniform. In the GSGF, the officers no longer wear the "over-seas" type cap, but use the service cap with the field uniform as well as with the service uniform. There has been no change in the basic enlisted field uniform since World War II. There has even been a return to the use of the field shoulderboard which was seldom seen during the years preceding 1957. Members of tank and assault gun crews still wear the basic armored coverall of a black, dark blue, or dark brown color. Shoulderboards are never worn with the coverall.

d. Miscellaneous.

Extreme cold in some parts of Eastern Germany has brought about the wearing of heavy winter protective clothing, quilted suits, fur caps, and the regular overcoat. Summer uniforms are of the standard cotton khaki, designed as are the winter garments. Special clothing, such as paratroop jump suits and Cossack uniforms, are never seen in the zone. The only distinctive uniform is that of the armored and air force officers, who have changed to a double-breasted coat with a roll collar. This type coat is also in extensive use by general officers and marshals.

5. INSIGNIA OF RANK:

The insignia of rank of Soviet Army personnel is worn on the shoulderboard, and is determined by a series of stars and longitudinal stripes (in the case of officers), and a series of transverse stripes (in the case of enlisted personnel). Differences in rank or grade are determined by the number and size of stars, and the number of stripes. The colors of the stars and stripes will depend on the branch of service and the type of assignment of the individual.

a. Marshals.

- (1) Marshal of the Soviet Union.

The Marshal of the Soviet Union, the highest rank attainable, wears a large (40-mm) single star on his shoulderboard, and also has a replica of the Seal of the Soviet Union where the branch insignia is normally found.

- (2) Chief Marshal of a Branch.

The chief of a branch (i.e. Chief Marshal of Artillery), is designated by a 30-mm star encircled by a wreath, with the branch of service emblem in the normal location on the shoulderboard.

- (3) Marshal.

The rank of Marshal is shown by the same size star as the Chief Marshal, but the encircling wreath is omitted. The Marshal may or may not wear an insignia of branch, as this depends upon his assignment. He may be serving in a particular branch, or he may be serving as a combined arms commander. If he is a combined arms commander it would be logical to expect him to show no one particular branch.

b. Generals.

All general officers wear 22-mm wide silver stars except generals in the medical or veterinary corps who wear 20-mm gold stars. The general officer rank structure follows that of the old German Army system, with four

CONFIDENTIAL

stars as the rank designation for a General of the Army, three stars a Colonel-General, two stars a Lieutenant-General, and the one star rank of Major General (General-Major).

c. Field Grade Officers.

Field grade shoulderboards differ from those of the company grade only in the number of longitudinal stripes upon which the stars are superimposed. Field grade officers may be readily identified by the two stripes running lengthwise of the shoulderboard rather than the one found on the company grade shoulderboards. An additional factor to be considered is the type of assignment held by the officer. Those in a combat leader type of assignment wear gold background shoulderboards with silver stars. Those who have a technical, service, or administrative type assignment generally wear silver background boards with gold stars. Rank among the field grades is shown by one star for a major, two for a lieutenant colonel, and three for colonel.

d. Company Grade Officers.

As mentioned in the preceding paragraph, company grade officers may be identified by the single longitudinal stripe through the center of the shoulderboard. A secondary identification feature is the somewhat smaller star that is used, but the difference is very slight and can not be considered as a prime identification feature. As in the other ranks, the greater the number of stars the higher the rank. A Junior Lieutenant has one star, a Lieutenant two, the Senior Lieutenant wears three stars, and the Captain has four.

e. The following tables are arranged to show the number and size of the stars and stripes used to show the rank of the various grades of officers:

MARSHALS

RANK	STARS		
	NO	COLOR	SIZE (mm)
Marshal of Soviet Union	1	Silver	40
Chief Marshal	1	Silver	30
Marshal	1	Silver	30

GENERALS

RANK	STARS		
	NO	COLOR	SIZE (mm)
Army General	4	Silver/Gold	22/20
Colonel General	3	Silver/Gold	22/20
Lieutenant General	2	Silver/Gold	22/20
Major General	1	Silver/Gold	22/20

CONFIDENTIAL**CONFIDENTIAL**

CONFIDENTIAL**FIELD AND COMPANY GRADE OFFICERS**

RANK	STARS			STRIPES	
	NO	COLOR	SIZE (mm)	NO	WIDTH (mm)
Colonel _____	3	Silver/Gold	20/16	2	4
Lt Colonel _____	2	Silver/Gold	20/16	2	4
Major _____	1	Silver/Gold	20/16	2	4
Captain _____	4	Silver/Gold	13/13	1	4
Senior Lt _____	3	Silver/Gold	13/13	1	4
Lieutenant _____	2	Silver/Gold	13/13	1	4
Jr Lieutenant _____	1	Silver/Gold	13/13	1	4

f. Enlisted Personnel.

The rank of enlisted personnel is indicated by transverse stripes in varying numbers, shapes and sizes. A shoulderboard with no stripes indicates a Private, while a single stripe 10-mm wide designates a Private First Class. Two stripes denotes a Junior Sergeant (the term "Corporal" is not used), while the rank of Sergeant calls for the third stripe. A Senior Sergeant has a wide (30-mm) strip and the highest enlisted rank, the equivalent of the US Master Sergeant, wears a T-shaped stripe formed by running a 15-mm stripe from the wide cross stripe down the center of the board to the outer (arm) edge.

The rank stripes are generally worn at the upper (neck) end of the shoulderboard, but in the security forces the stripes are worn in the middle of the board. The master sergeant in the security forces also wears the T-shaped stripe, but the wide cross stripe is located at the lower end of the shoulderboard, thereby inverting the insignia. The following table shows the number and size of the stripes on enlisted shoulderboards.

ENLISTED PERSONNEL

RANK	STRIPES	
	NO	WIDTH (mm)
Master Sergeant _____	1 (T-Shaped)	30
Senior Sergeant _____	1	30
Sergeant _____	3	10
Jr Sergeant _____	2	10
Private First Class _____	1	10
Private _____	None	--

CONFIDENTIAL**CONFIDENTIAL****g. Cap Badges.**

An additional identification feature of the Soviet uniform may be found in the type badge worn on the service cap. The enlisted cap badge is a outlined red star with super-imposed gold-colored hammer and sickle. This badge was formerly worn by officers up to the grade of colonel as well as by enlisted men.

Today, all officers except aircraft pilots wear a cockade-type badge consisting of the red star, with hammer and sickle placed on a white enamel oval. The white oval is surrounded by a notched or knurled oval ring of gold color. Generals and marshals will have this badge embroidered on the cap, while the other officers have the enameled metal.

Officer pilots and all generals and marshals of Aviation wear the same basic cap badge plus the following changes:

- (1) The oval is sky-blue instead of white;
- (2) The cockade is surrounded by a gold leaf ornament;
- (3) A gold wing and star is worn above the cap badge.

**4. BRANCH OF SERVICE:**

The Soviet army displays branch of service by a service insignia, and through the use of distinctive colors for each branch. The color of the branch will be displayed on several parts of the uniform, but it is the shoulderboard that provides the most information concerning the branch as well as the rank of the individual.

a. Types of shoulderboards.

With a few exceptions, all personnel of the same unit (e.g. regiment or separate battalion) wear the same color combinations on their shoulderboards. However, variations of branch insignia will be found within the unit. For example, the mortar and antitank personnel in a rifle regiment wear the infantry shoulderboards, but will also wear the crossed cannon insignia of the artillery. With this in mind, the possible combinations of colors and branch insignia are numerous, and therefore have not been discussed in great detail in this chapter. The basic facts concerning the colors and insignia will suffice for identification purposes.

Both garrison and field type shoulderboards are in general use in the Soviet forces. In time of peace, and for most dress parades or other formal occasions, the garrison shoulderboards are usually worn. On maneuvers, exercises, and during war; however, the field shoulderboard is normally worn. Officers have two separate and distinct types of shoulderboards, while enlisted personnel wear a reversible type, enabling them to use it in either garrison or in the field.

b. Differences in types by rank.

The ornamentation and insignia on the shoulderboards of marshals and general officers are embroidered in metallic thread. Field and company grade officers and enlisted personnel use metallic ornamentation and insignia on the garrison shoulderboards. On the field boards non-metallic insignia, such as plastic or pressed paper are often used.

CONFIDENTIAL

CONFIDENTIAL

Shoulderboards are made in four different widths: 65-mm, 60-mm, 45-mm, and 40-mm. All marshals and most generals wear the 65-mm shoulderboard, however, generals of Justice, Medical, and Veterinary Service wear shoulderboards of 45-mm width. Most field and company grade officers wear the 60-mm wide board, while the field and company grade officers of the three services mentioned above wear the narrow 40-mm board. All enlisted men, regardless of branch, wear the 60-mm wide shoulderboard.

There are indications that some Medical Service generals are beginning to wear the wider boards, which is already a standard practice in the Soviet navy.

Officers' garrison shoulderboards have either gold or silver as a background color. Those branches using the narrow boards wear silver only, and they are the only branches in the Soviet army that use silver for generals. The silver background appears on wide shoulderboards generally in service type units. For example, field and company grade officers of the Intendance Service (Quartermaster) wear 60-mm wide silver background boards, while generals of the same branch wear gold. In certain other branches, such as artillery and armor, the engineer-technical service personnel on duty with these branches wear 60-mm wide shoulderboards with silver background. Another example, the ordnance function of the artillery branch is effected by the so-called Engineer-Artillery Service. These officers wear the red piping and crossed cannons of the artillery, but wear them on silver rather than gold shoulderboards. In branches such as the Intendance Service, which wears only silver boards, the Engineer-Technical personnel are distinguished by the wearing of their own branch insignia (crossed hammer and wrench), instead of the wreathed star (in silver) of the Intendance Service. All other officers on line duty normally wear the 60-mm wide board with gold background and branch color piping, with the metallic insignia of the appropriate branch displayed thereon.

Enlisted personnel wear dress or garrison shoulderboards in their branch colors, with the metallic branch insignia worn above the stripes (toward the neck). Field shoulderboards are of khaki or OD color with the insignia worn in the same manner as on the garrison board. The branch color appears only in the piping on the field board.

An interesting note on the use of the field and garrison type shoulderboards is found in the change to the reversible board mentioned earlier. It has become apparent that the Soviets are changing over to a shoulderboard and branch identification system that stresses one color only. This is carried out completely in the reversible boards, in that the colors will be solid, and will show no piping. Artillery and armor, particularly, are observed more and more frequently with solid black plus the appropriate metallic device, but without the normal red piping. The reverse of this shoulderboard will be plain khaki without piping. It is believed that this is to be the standard enlisted shoulderboard, and that we will no longer see the black-red, magenta-black, and other long standard combinations.

Officers also wear their branch insignia on their collar tabs when an overcoat or double-breasted, roll-collar blouse is worn. Chief Marshals and Marshals of arms wear the branch insignia on the shoulderboards with all uniforms, as do generals of Artillery, Justice, Medical Service, and Veterinary Service. Other generals do not display branch insignia.

CONFIDENTIAL**CONFIDENTIAL****SHOULDERBOARD COLOR COMBINATIONS****MARSHALS OF THE SOVIET UNION**

e. Collar tabs and collar patches.

Collar tabs and patches in the Soviet Army display the wearer's branch of service, and to a limited extent his grade. In this publication the word "collar tab" applies to the cloth insignia worn by all personnel on the collars of the overcoats, and by officers (excluding marshals and generals) on the collars of double-breasted, roll-collar, OD service blouses. The word "collar patch" is applied to the cloth insignia placed on the collar of the standing-collar blouse of enlisted personnel. A similar blouse, with appropriate collar patches, was once worn for dress by officers. It is now obsolete.

Collar tabs for marshals and generals are piped with either gold or silver metallic thread. The color of the piping and of the leaf design is the same as that of the shoulderboards. Marshals of the Soviet Union wear an oak leaf design, while all other marshals and generals have a laurel leaf design. Marshals and generals wear collar tabs on the overcoats only. On double-breasted roll collar OD blouse the leaf design is worn by itself without a collar tab.

Field and company grade officers no longer have piping on their collar tabs. On the upper portion of the collar tab, 1-mm from the top, all field and company grade officers, and all enlisted men wear a branch insignia. When the branch insignia is worn on the collar tab it is not worn on the shoulderboard.

It is believed that enlisted collar tabs are now also without piping. Formerly, most enlisted collar tabs were piped, and this still might be true because of a transition period, or in certain branches of the service.

Collar patches are all without piping. Noncommissioned officers (junior sergeant and above) wear a plain metal bar in the horizontal position in the center of the collar patch. The bar is usually gold in color, although certain specialized personnel appear with silver bars. Uniforms incorporating collar patches are considered parade or dress uniforms for enlisted personnel. They are the equivalent of the new dress blue uniform of the officers.

d. Arm of service insignia.

The branch or arm of service of Soviet military personnel can be determined most accurately by the metallic device or emblem of branch, which is worn on shoulderboards and on overcoat collar tabs. In the case of officers, this device is worn above the stars of rank, and enlisted men wear the emblem above the stripes denoting their rank. The metallic devices are generally silver when worn on gold shoulderboards (combat assignment), and gold when worn on silver background boards (administrative or technical assignment). Enlisted men wear gold emblems on all shoulderboards except personnel of the Veterinary Corps, Administrative Services, and the Intendance Service. The following tables show the device for the major arms and branches.

ARM OF SERVICE	EMBLEM	
Administrative Services	Wreathed Star (Silver)	
Air Force	Wings and Propeller	
Air Force Engineers	Wings and propeller with red star in center	
Armored	Tank	
Artillery	Crossed Cannons	
Band	Lyre	
Chemical Warfare & Engineer Technical Services	Wrench and Hammer	
Engineer (Combat and Constr.)	Bill-doser on a circular saw blade, anchor, and lightning flashes	
Engineer (Topographic and Survey)	Hammer and wrench with red star in center	
Infantry	Wreathed Star	

CONFIDENTIAL

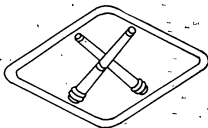

Intendance (QM)	Wreathed Star (Silver)	
Justice	Crossed swords behind a shield	
Medical	Serpent coiled around Hippocrates cup (Soviet version of Caduceus)	
Motor Transport	Winged steering column and wheels	
Military communications and Railroad troops	Crossed wrench and hammer, anchor, wings, and red star	
Signal	Three vertical lightning flashes crossed by wings, with red star centered	
Veterinary	Serpent and cup (Silver)	

5. SPECIAL INSIGNIA:

There are various types of special insignia, badges, stripes, patches, chevrons, etc., which are awarded to individuals and/or to personnel in special types units. These distinctive insignia are often valuable aids in the identification of such units and personnel.

a. Anti-tank Patch.

The insignia for anti-tank unit personnel consists of a diamond shaped patch with black velvet background, crimson piping around the edge of the black patch, and the crossed cannon insignia of the artillery embroidered in gold in the center. This patch is worn on the left sleeve half way between the elbow and the shoulder.

CONFIDENTIAL

b. Railroad Communications Patch.

The insignia for military railroad communications troops consist of a diamond shaped patch with a black velvet background, with dark blue piping. The insignia worn on this patch is an enlarged railroad communications insignia, and may be either metallic or embroidered on the background. The patch is worn on the left sleeve half way between the elbow and the shoulder.

c. Guard's Badge.

The Guards Badge was instituted in 1941 for units which won the elite title of "Guards". It is worn by all ranks on all uniforms, including overcoats on ceremonial occasions, on the right breast below other decorations. This badge consists of a red star, trimmed with gold, encircled by a gold wreath. Above the star is a red banner, also trimmed with gold, and bearing the word "Guards". The letters "SSSR" are embossed on a smooth surface at the lower center of the wreath, and stand for USSR.

d. Parachute Badge.

This badge consists of a blue diamond shaped field upon which is a white parachute and a five pointed red star. The parachute badge is worn on the right breast. A sleeve patch, similar in form and appearance to the anti-tank patch, is also worn by paratroops on the right sleeve of the jump suit, quilted jacket, and on the left sleeve of the overcoat. It shows a parachute and wings in gold thread on an OD background.

e. Proficiency Badges.

The Ministry of Defense of the USSR Order of 1 May 1957 approved new badges for "One who excels in the Soviet Army", "One who excels in the Military Sea Fleet", and "One who excels in the Military Air Force". This badge is presented in recognition of meritorious achievement and service of soldiers, sailors, sergeants, and senior non-commissioned officers of the Soviet Armed Forces. These badges may be granted only once during the entire tour of duty, and have been issued to replace the former "Distinguished Badge". The badge is a shield with an oak wreath border. In the upper portion of the shield is a white enameled circle in which is a gold edged red star with a gold hammer and sickle. The outer rim of the circle is white enamel and is inscribed in gold "One who Excels". The colors of the shield are ruby red and blue. In the lower portion of the shield is the appropriate insignia of the Army, Navy or Air Force.

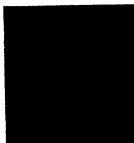

CONFIDENTIAL

CONFIDENTIAL

CONFIDENTIAL

f. Alumni Badge.

There is a new badge which is worn by officers who are alumni of military schools of the Soviet Army. The badge consists of a white enamel field encircled by a raised laurel wreath. The top of the wreath is covered by a red banner containing a five-pointed red star, with a hammer and sickle in its center. On the white enameled field is the emblem of the Soviet Union and the letters "VU" (Voennoye Vozhishcheye - Military School), in ruby red enamel. The laurel wreath is encircled on both sides by a thin rim. On the bottom is a small white enameled shield bearing the letters "USSR" inscribed in pale gold. The badge is 1.8 inches long and 1 inch wide.

CONFIDENTIALPART THREE
ORDER OF BATTLE HOLDINGS

FOREWORD:

The following two chapters present the accepted holdings of all units known to be currently in the GSPG. All available intelligence concerning the IDENTIFICATION and DISPOSITION of these units, plus their subordination and command structure, is presented in two separate chapters, which may be used in a cross-index manner. Chapter 9 lists the GSPG with its major subordinate units, the six armies with their divisions and supporting units, the divisions with their complete command with their divisions and supporting units, the divisions with their complete command structure, and the artillery brigades with their subordinate regiments and battalions. Chapter 10 presents all units of brigade size and smaller, together with their parent unit and location where known. The units in this chapter are listed by type and size for convenience.

Chapter 9
ORDER OF BATTLE HOLDINGS
MAJOR UNITS

1. General.

This chapter designates the known locations of the major units of the GSPG. Each unit is shown by its numerical designation, its parent unit (subordination), the city or town in which it is located, the coordinates of that city, the name of the kaserno that is accepted as the home station of the unit, and the installation number of the kaserno. Items that are questionable are marked "Q". The factors that have been affected by the recent reorganization are described in the remarks section for each unit.

2. GSPG.

The holdings listed include the armies, divisions, brigades, regiments, battalions, and separate companies known to be directly subordinate to the GSPG. Where units have elements in more than one area (armies, divisions, brigades), only the city where the headquarters is located has been listed.

3. Armies.

The army units listed include the line divisions and those support elements that are directly subordinate to the army, such as the artillery brigade and the rocket launcher regiment. The combined arms armies are listed first, with the tank armies following.

4. Divisions.

The divisions are listed numerically without regard to type. The artillery and antiaircraft artillery divisions are included with the line divisions in numerical

CONFIDENTIAL

87

CONFIDENTIAL

order. The units listed under each division include all known elements subordinate to the respective divisions.

5. Brigades.

The brigades, which are also listed in Chapter 10 as minor units, are listed in this chapter only to show the subordinate elements (regiments or battalions) that have been identified. The recent reorganization, and the continuing changes in the GSF antitillery elements have kept the production of intelligence on the brigades at a minimum.

NOTES

SECRET

PART FOUR - REFERENCE DATA

Chapter 11 contains two listings of all known senior officers in the GSFG. The first section is an alphabetical list by last name, and includes the rank, position held, the unit to which the officer is assigned, the parent unit, and the last known date on which any information concerning the individual was obtained. For example, if the date following an officer's name is 1056, it is to be assumed that the last available information on that officer showed him to be in the unit and position listed during the month of October in 1956.

The second section presents the same information listed numerically by unit designation.

Chapter 12, Installations, lists all known Soviet and East German Army installations in the Soviet Zone of Germany. In addition, those East German Security Forces installations which have been identified are listed along with the army installations to enable the user to avoid mis-identification of military units. The first section of the chapter lists all cities in the East Zone wherein a military unit or installation will be found; the cities are listed in alphabetical order. The second section lists the installations in numerical order with no regard for city or town. Each installation is presented with all available information on exact location by grid coordinates, description of the location with reference to nearest town or prominent landmark, capacity in numbers of troops, and the identified unit or units stationed therein. In the case of depots, the capacity is listed by metric tons storage capacity, gallons, or other pertinent factor.

Section 3 of the chapter lists the training areas used throughout the zone, both by the GSFG forces and the East German Army (EGA). Local, "just outside the Kaserne" type areas are not included in this list. The areas listed are to be considered as areas that are used by large (regimental or larger) units, for specialized training (AAA range), or the so-called maneuver areas.
