Approved For Release 2001/03/06 : CIA-RDP82-00457R009600150006-8 25X1A SEGRET/CONTROL/US OFFICIALS ONLY 25X1B The troops in the Stendal military post were restricted to their quarters. Hight major convoys of vehicles were seen passing through Cohre, 6 km scuttisest of Stendal, on 18 October. They came from the direction of Stendal 25X1A A train seen standing at the Stendal railroad station at 2 a.m. on 27 Orleber carried about 30 trucks with numbers of the train subsequently departed in a northerly direction. (5) At 7 a.m. on 30 October, a unit of 150 to 200 troops with 8 x 100-mm AT guns, 12 caterpillar tractors, 6 trucks and 1 field kitchen was loaded on a train at the Stendal railroad station. The loading operation was completed by noon, and the brain remained on the Magdeburg-bound track, but was without an engine. Five of the vehicles on the train work 25X1B 25X1B A motor column seen coming from the direction of Stendal on 17 October consisted of 12 rocket launchers and about 20 vehicles of the 25X1B <u>l field</u>25X1B 10 rocket launchors and 15 trucks of the kitchen, I ambulance and I repair shop truck. Six to eight trucks of the wore occupied by troops with field equipment who wore red-25X1B bordered black opaulets. Some of the trucks of the carried troops, local residents equal that the column moved toward Tangermunde. The same column was seen returning along Osterburgerstrasse at 2 p.m. on 24 October. Twolve prime movers, each carrying about 12 soldiers and towing a 100-mm AT gun, were seen moving toward Berstel at 10:30 p.m. (7) 25X1A (1) The write in the Hindenburg Massame are believed to include a motorized rille regiment of the 207th Mtz Rifle Div, The 122-on artillery pieces probably belong to the 693d How Arty Regt of the same division. Another 25X1A artillery pieces, probably of the same unit, in the 25X1X berracks installation at the end of September 1951. It is therefore possible that at least components of the artillery regiment, which is carried at Borstel sirfield, are now stationed in the Hindenburg Asserme. The assignment of the tanks wontioned in the procent report cannot be determined, because the present and previous reports indicate that the division's 16th Cds (?) Tank Regt is stationed in the Albrecht der Heer . The statement in the present report that the troops included 40 percent war veterans is doubted inseruch as the percentage of war voterans is believed to amount to no more than 10 or 15 porcent, namely NCOs. The vehicle numbers mentioned in the present report belong to the 207th Litz Rifle Div. (2) Regarding the location of the tank regiment, see Consent (1). The JS tanks are probably heavy SP guns on JS chassis. The AT guns may belong to the AT artillery battelion of the 207th litz Rifle Div. The vehicles observed below to headquarters units and the Hg IXXIX Litz Rifle Corps, headquarters units of the Third Shock army and components of the 207th litz Rifle Div. (3) The Tauentzian Kaserna is believed to quarter a motorized rifle regiment of 25X1A the 207th litz Rifle Div, Sin the present report belong to this division. The vehicle 25X1B (4) the columns belong to headquarters units of both the Third Shock Army and the LXXIX litz Rifle Corps, and to components of the 207th Mts Wile Div.

(5) the oth Art Div. See 25X1A

(6) 1 unit of the 4th (?) AT Arty Brig.

(7) The observation of 22 rocket launchers in conjunction with vehicle medicus which partly belong to the IXXIX Mtz Rifle Corps confirms the corps's unidentified rocket launcher regiment (?) in Stendal-Borstel until 17 October 1951. The number of the rocket launchers fairly definitely indicates that the unit must be of regimental size. The repeated observation of up to 22 x 100-mm AT guns in Stendal during the summer of 1951 led to the conclusion in August 1951, that components of the 780th (Gun ?) Arty Regt of the 207th Ltz Rifle Div

25X1A more stationed in Stendal. . This is confirmed by the present report which indicates the possibility that components of the regiment may also be stationed in Gardelegen and Borstel. The report indicates that the units from Stendal returned to their post from field exercises, and that the barracks installations at the post were again occupied to capacity by 5 November 1951. The strength estimates of theops in the individual installations approximately correspond to those reported prior to the summer training period.
