	c. Workshop parts under construction (4)
	The future layout cannot be determined.
	of workshops 6 through 10, could not be determined in October 1949.
	d. Tool shop (6)
	e. Corkshop 15, Lathe shop (7),(8)
	An annex (9) was constructed for an annealing furnace.
	f. Forge and result; shop (10)
	g. Hardening snop (43)
	n. Workshop 24, foundry (10) and (17)
1	building (17) is an excension of building (16).
	There were six open-hearth furnaces according to 12. said this building was a "boiler house" but without giving further materials on
	the installation.
	1. Workshop I, mechanical workshops (1%)
	start of operation for January 1949. were produced here.
	k. Open-hearth shop (20)
	open-hearth furnaces).
	 echanical workshops (25) with grinding shop, Lathe shop and milling shop.
	m. Torkshop 32, forge and pressing shop (26).
	oil fueled eardening furnacesfr the furnaces to the oil tanks (D).
	n. Boiler house (27)
	the indications on the boiler house are very uncertain.
	not median any boll r house so evant further to the west. It is also possible that the four large smokestacks west of the building (11), which were not yet rebuilt, led to
	the assumption that building (27) is a boiler house.
	5. Nork force:
	a.
	Ms. The following Soviet wor. forces were estitated:
	4,000 to 5,000 in 1,45/1940
	6,000 to 7,000 in October 1947 5,000 to 10,000 in March 1948
	5,000 to 6,000 in October .949
	6. Lanagonent:
	No information is availableto

	be done by the Building frust Ao 53 under the supervision of the engineers Volkenstein and Auligin. However, this information is hardly credible.
7.	Production:
	long with a chilber ranging from 70 to 420 mm.
	Andividual data
	n. Jun barrels, caliber about 88 and 122 am produced in 1945/1946.
	b. Gun barrels, breech blocks, crank smalls for internal combustion engine dany eastings for reconstruction requirements. Beginning of 1947.
	c. Sun barrels, caliber about 420 and 170 to 200 man. Two barrels were moved daily to the artitlery range for test firing.
	d. In addition to the saily production of 5 or 6 long-barrel guns much repairwork was done on guns and mortars. December 1947.
	e. Long berreis and torgedo tubes.
	f. oi and the repair of antitank guns and nowitzers. T34 tanks were possibly smalled in the plant as he never observed cannot to leave the plant.
	gindicated seeing two 122-mm barrels leaving daily for the artitlery range during November 1948.
	hreported gun barrels with a caliber of about 70, 80, 105 and also 420 mm.

	l«.	Machine equipment:	
		American, Gritish, Gorman and Soviet av chines were observed.	
	13.		
25X1		No mention was made	
		of any air raid precautionary measures.	
	и.	Mailroad facilities:	-
25X1 25X1		Two spur tracks enter the plant from both the north and the south. The tracks pass each workshop. The entire transportation traffic within the plant can be done by freight cars and sounting locomotives	_] 25X1
25X1		Comment:	
		a. Note to harm Ag: According to additional available records it is proved	
25X1		In the workshop building 13 is the gray-iron and non-ferrous me all formary.	
		b. Note to para 4h: (as also shown	25X1
	· ·	in other records) that the workshop sections 16 and 17 are a boiler house. At any rate the heating of the plant is done from this buildin. It was not learned whether electric power is also generated. A former dussian in designated the installation as TEZ (i.e. neating and power plant). However, he also indicated that electric power was supplied from Stall-Gres. C. note to para 4k: There are four furnaces, three open-nearth furnaces and one large furnace. For the saction of scrap, and one large furnace, for the saction of scrap, and constant of the plant.	
		d. Note to para An: This is possibly a compressor station operating the steam hammers and steam presses in workshop 10 (later also in workshop 11).	
		In 1942 the wordshop buildings 10 through 13 totaled eight smokestacks.	
		f. The production data are much too uncertain to allow any critical examination. It is only proved that the plant was not in full operation by the end of 1/4%, opart from some activities for plant requirements (repairs, reconstruction work) the available capacity seems to be fully used for gun production. There are only sporadic reports on secondary products such a engine shafts. The present monthly output will hardly exceed 200 guns of all caliber.
