3. In addition to these demands, the Soviets ask for electric power equal to three and one half billion kws in energy. Centers are to be at Petrosani, Doicești, Filipești, Sangiorgiu, Comanesti, Sarmasag, and Ovidiu. The electric plan looks forward to uniting the following cities with these centers: Bucharest, Ploesti, Brasov (Stalin), Sibiu, Cluj, Baia Mare, Hunedoara, Arad, Resita, Timisoara, Craiova, Focșani, Barlad, Roman, Bacau, Iasi, and Galati. There is to be a hydroelectric central system producing 230,000 kws, and a "chemical electric" system producing 660,000 kws. Efforts will be made to build up the existing centers this year (1952) to produce an additional 100,000 kws. This system is to have electric generators producing 184,000 kws and transformers of 850,000 kws capacity.
