INFORMATION REPORT

CD NO.

COUNTRY East Germany

DATE DISTR. 12 December 1952

SUBJECT Development Projects at the HF Telecommunication Plant, Berlin-Oberschoeneweide
 25X1

NO. OF PAGES 2 25X1

PLACE ACQUIRED [Redacted]
 DATE OF INFO. [Redacted] 25X1

NO. OF ENCLS. (LISTED BELOW) [Redacted]
 SUPPLEMENT TO REPORT NO.

[Redacted]

THIS DOCUMENT CONTAINS INFORMATION AFFECTING THE NATIONAL DEFENSE OF THE UNITED STATES WITHIN THE MEANING OF TITLE 18, SECTIONS 793 AND 794, OF THE U. S. CODE, AS AMENDED. ITS TRANSMISSION OR REVELATION OF ITS CONTENTS TO OR RECEIPT BY AN UNAUTHORIZED PERSON IS PROHIBITED BY LAW. THE REPRODUCTION OF THIS FORM IS PROHIBITED.

THIS IS UNEVALUATED INFORMATION

[Redacted]

1. In March 1952, the following development projects were being worked on at the HF Telecommunication Plant, Berlin-Oberschoeneweide, by a total of 45 physicists, engineers, technicians, glass blowers, and mechanics:

25X1

Development Project	In Charge	Degree of Completion
10-kw ultrashort wave television triode, resembling the RS-721 type Telefunken tube; to be manufactured later in the Lrfurt (U 51/J 36) Radio Plant	Dr Ladurner (fnu)	75 %
3-kw transmitting triode for ultrashort wave television	Graduate Engineer Reek (fnu)	40 %
1-kw transmitting triode for ultrashort wave television	Graduate Engineer Reek	95 %
300-w ultrashort wave tetrode for television, as a control tube for the 1-kw transmitting triode	Graduate Engineer Reek	60 %
Type LS-111 sweep tube, a redevelopment (Nachentwicklung) project	Brinkmann (fnu)	unknown
The entire miniature tube program, a redevelopment project, of which types 6J6, 6AG5, 6AL5, and 6A4 have been completed	Madraht (fnu)	"
Power klystron for 3-cm wave length, 1.5 w and later 15 w	Heydborn (fnu)	00 %

- 2 -

Development Project	In Charge	Degree of Completion
Large tube. (Plan erwellen- schubel for wave lengths of up to 6 cm, was completed in glass and is being remodeled for Loetheranil (solder ceramics) bases.	Heydorn	unknown
Continued development of the LD-12 for higher frequencies by conducting the cavity resonators. Limiting wave length of 7 cm was reached, but one of 6 cm was required.	Brinkmann	unknown
anode	Brinkmann	unknown

Professor Dr. Daehne (fnu) from the observatory in Potsdam was assigned to the plant as a free lance member. He was looking for other technicians for astronomical measuring work.

A scientific work conference was held at the HF plant on 19 and 20 April 1952. The conference was attended by about 250 persons. The raw material situation for tube production was discussed. It was pointed out that the principal difficulty in the procurement of raw materials was the fact that the plants in Hettstedt (U 52/J 64) and Ansbach (U 51/J 53), which are capable of producing metals of the highest degree of purity for vacuum engine rings, were unable to meet the requirements. The plant in Ansbach has had a high-frequency furnace of 300-kg capacity for the past three years but could not put the furnace into operation because of the lack of specialists. The plant produced small quantities of Fe-2 iron which was tested and approved in Erfurt (U 51/J 36). The plant in Hettstedt has not yet been capable of producing Fe-2 iron because it still lacked one sandblast blower. The plant was trying to produce two new types of iron to have high tensile and compressive qualities and a low rate of gas release. The new types were designated M A 8 and C K 8. The conference terminated with a communique from Director Mueller (fnu) of the HF Plant to Deputy Minister-President Heinrich Rau, which requested that a delegation of representatives from the HF Plant, the Erfurt Radio Plant, the Muehlhausen Tube Plant, the Neuhaus Tube Plant, the Administration of the RFT in Leipzig, and the Berliner Gluehlampwerk be received in order to report on the raw material situation and to receive instructions.

It was believed that the government should take strong measures to accelerate the raw material program for the electro-vacuum industry or else the industry would have to stop manufacturing tubes.
