Attachment I

Title : Electrical Circuits With Steel

Author : L. A. Bessonov

Publisher: State Energy Publishing House, Moscow, Leningrad, 1948

Editor : B. V. Lomonosov

Technical Editor : A. M. Friedkin

This book deals with basic theories of electric circuits, including those which utilize transformers and throttles with steel pole bolts. It also includes a rather complete appendix of reference literature (German, English, American, French, etc). In the introduction, the author acknowledges the technical advice of professors K. M. Polivanov and A. A. Feldbaum.

25X1

Title : Rocket Dynamics

Authors : I. Cocey and I. Untenbogart
(Dutch Scientists)

Translated from the English by: Prof. Dr. of Physics/Mathematics, A. A. Kosmodemyanskiy

Publisher : State Defense Industry Publishing House, Moscow, 1950

Editor : M. S. Runyantshev

Technical Editor : H. N. Piskar

This book deals with aerodynamics of guided missiles, rocket energy, ballistics, and gyroscopic principles. In the introduction, Kosmodemyanskiy claims that many of the theories of the authors were altered and modified because of their obsolescence. Chapters I-V of the original were omitted; Kosmodemyanskiy claimed that they were superfluous since the deleted portions are more than adequately covered in several "excellent" Soviet publications. A fairly detailed history of the V-1 and V-2 is presented in chapters VI and VII. The original book was a Dutch publication; this particular copy was translated from an English version.
