

SEATO REPORT

1964 ——— 1965

By LT. GEN. JESUS M. VARGAS
Secretary-General
South-East Asia Treaty Organization

HS/CSG-1774

The SEATO Convention on University Equivalences was signed at the University of the Philippines on SEATO Day, September 8, 1965. Representing their respective Governments at the ceremony were, from left: Mr. M. Masood, Ambassador of Pakistan to the Philippines, Mr. Thanat Khoman, Minister of Foreign Affairs of Thailand, and (second from right) Mr. Mauro Mendez, Secretary of Foreign Affairs of the Philippines. General Carlos P. Romulo, President of the University of the Philippines (centre), presided over the ceremony. Mr. D.A. Wraight, Deputy Secretary-General of SEATO (far right) represented the Organization.

The Prime Minister of the United Kingdom, Mr. Harold Wilson (standing), addressing the opening session of the tenth meeting of the SEATO Council of Ministers in London, on May 3, 1965. On his right is the Minister of Foreign Affairs of Pakistan, Mr. Z.A. Bhutto, and on his left, the then Secretary-General of SEATO, Mr. Konthi Suphamongkhon, the Under-Secretary of Foreign Affairs of the Philippines, Mr. Librado D. Cayco, and the Minister of Foreign Affairs of Thailand, Mr. Thanat Khoman.

The Situation in South-East Asia

South-East Asia continues to be harassed by aggression. Free nations are forced to cope with the tactics of infiltration and subversion in order to preserve their right to direct their own destinies. Aggression is aggression, no matter what cloak it hides under; and people want to be free.

The tactics of Communist infiltration and subversion pose a problem which has world-wide implications: can a small nation successfully defend itself against this aggression which slithers from the pit of deceit, terror and human bondage? Or, with the aid of allies, can this aggression be scotched?

Approved For Release 2002/10/21 : CIA-RDP83-00036R001100170007-4

The issue is joined in South Viet-Nam. In 1954, the Geneva Agreement divided Vietnam at the 17th parallel. At this time the Vietnamese people were allowed to move from one part to the other and it is worth recalling that one million of them left their homes in the North and moved to the South. They "voted with their feet" against Communism.

For five years uneasy peace existed. In South Viet-Nam, people were developing their economy, improving their living conditions. The prospect for peace and progress was good.

In 1959, however, the Government of North Viet-Nam called for a full-scale attack by the Viet Cong on the Government of South Viet-Nam. Men and weapons were sent, and military direction was given by the North Vietnamese Government. The International Control Commission in 1962 reported these facts. This attack was a deliberate attempt by the Communists to harass the Government of South Viet-Nam. The contrast between the improving economic and social conditions in South Viet-Nam and the harshness of life in North Viet-Nam may have been a factor in this new attempt at domination.

Whatever the precipitating factor of the decisions, tens of thousands of armed men, some of them in regular battalions, have been sent from North Viet-Nam in a campaign of conquest.

The tactics of the North Vietnamese-directed forces have made the name "Viet Cong" hateful in South Viet-Nam and in the world. Through deliberate use of terror tactics, they have imposed their will on some of the people—a variation of the same terror on which Stalin based his control and which his successors denounced.

The Viet Cong and the political instrument of the Communists, the National Liberation Front, have created nothing in South Viet-Nam. They have produced nothing for the people. They have contributed nothing. In fact, they boast of "living off the country" — a cancerous boast.

Unable to recruit sufficient volunteers in South Viet-Nam for their armed forces, the Viet Cong have had to resort to hauling young men off by force. Unable to convince teachers and civic leaders, the Viet Cong have resorted to murder and terrorism. These are tactics of infamy. But these tactics proclaim failure: by using them, the Viet Cong tacitly admit that people do not willingly support them.

This repugnance for the Viet Cong is demonstrated by the present movement of refugees from the Communist-dominated areas into those controlled by the Government of South Viet-Nam. There are few indeed who move to the Viet Cong areas.

The people of South Viet-Nam and their Government are engaged in combatting the Communist aggression while they continue their programs for

economic and social improvement. Massive economic assistance has been provided by friendly nations. The United States has contributed the greater share; over thirty other free nations (including all of the SEATO members) have demonstrated their support for the people of South Viet-Nam by giving assistance in various forms.

Several nations have, at the request of the South Vietnamese Government, supplied combat troops to repel the Communist North Vietnamese guerrillas. In 1964, five years after the North Vietnamese attacked, South Vietnamese and American air forces began to bomb military targets in North Viet-Nam to interdict the sources and routes of supply of men and arms.

The cause of freedom is thus being strongly defended.

Communist probing for expansionist goals was also directed more closely toward Thailand this past year. In implicit admission of the Communist Chinese regime's intentions, its Foreign Minister stated that guerrilla warfare could be expected in Thailand before the year is ended. Communist intentions being already well known, the Foreign Minister's statement served mainly to reveal his arrogance.

The Thai Government has long been alert to the threat of Communist expansionism. Its signature to the SEATO Treaty in 1954 was based on recognition of that danger. During the intervening years it has strengthened its own defences, as well as acted in co-operation with SEATO allies in defence exercises.

Thailand has also prospered remarkably under the competent guidance of its leaders. Its outstanding progress, in economic and social fields, in effect constitute a challenge to Communist nations in the area, a beacon to the people disheartened by the rigidity, the poverty, the cruelty of Communist regimes. Communist parties must impose strict thought discipline on their agents in Thailand, lest the benefits of the free society there turn their allegiance away from their foreign masters.

The neutrality of Laos, agreed by the 1962 Geneva Conference, continues to be violated by the presence of North Vietnamese armed forces, by the actions of the Communist Pathet Lao and by the use of Laotian territory to send men and supplies to the Viet Cong in South Viet-Nam. The flouting of international agreements by the Communists demonstrates the urgent need for guaranteed means of enforcement to be incorporated in such agreements.

The "confrontation" policy of Indonesia has introduced new tensions in the Treaty Area. It has, as well, introduced a premise which Indonesia itself would very probably not wish to see adopted universally. This premise is that a nation has a right to attack another nation simply because it does not approve of that nation's policy.

Approved For Release 2002/10/21 : CIA-RDP83-00036R001100170007-4

The ideological and national rivalry of the Soviet Union and Communist China has shown no substantial abatement. The abrupt and totally unexpected (even by Khrushchev) fall of the Russian leader in October 1964 could, at first glance, have been expected to lead to a healing of the breach. However, conflicts based on national ambitions run too deep to be solved by changes in personnel.

The mutual recriminations which have split the Communist "monolith" might be thought of as a source of comfort to nations threatened by Communism's aggressive creed. However, this split merely means that there are now two main sources of subversion in the world instead of one, and that these two sources may intensify their drives because of that competition. Their tactics differ but their aims remain the same. They are agreed that Communists must conquer the world. Their quarrel is primarily concerned with who should rule within the Communist world.

The explosion of nuclear bombs by the Communist Chinese was significant, mainly because it demonstrated that in the course of time this weapon of tremendous destructive capabilities would be added to the arsenal of a regime which advocates violent tactics of conquest. The world is not reassured either by the platitudes uttered by Mao Tse-tung, or by his self-contradictory statements.

The scientific and industrial complex which has been necessary to build the nuclear bomb has also created a new area of vulnerability for the Chinese Communists. The regime has now more to lose. A recent news item reveals how seriously the regime takes this vulnerability: it states that "a million young Chinese have been sent to the Sinkiang province to build defences around the Chinese nuclear installations there." It is to be hoped that the Chinese Communists will inform themselves fully on the inevitable effects of a nuclear duel.

Responsible nations of the world have sought, through the United Nations and through collective defence pacts, to establish systems of peace under the rule of law. Using a variety of means, attempts have been made to settle international disputes by peaceful means, by discussions or negotiation. The record speaks for itself with regard to the present situation in South-East Asia.

Over and over again, peace-seeking overtures have been made by neutral nations and by nations which are supporting the defensive actions of the Government of South Viet-Nam. The United Kingdom and Canada individually, and the British Commonwealth collectively, have initiated moves for a peaceful solution. Seventeen unaligned nations joined together in proposals for this purpose. The United Nations has been asked to assume a larger role in South-East Asia, and the member nations have been asked to use their influence to

Approved For Release 2002/10/21 : CIA-RDP83-00036R001100170007-4

Approved For Release 2002/10/21 : CIA-RDP83-00036R001100170007-4
bring the conflict to the conference table. The United States has initiated or supported, on at least fifteen occasions, efforts to resolve the issues by peaceful negotiations. The United States has also stated that it is prepared to engage in negotiations or discussions with no prior conditions.

Yet the Communist nations have spurned every overture. The Communist proposal for settling the Vietnamese problem is that, first, all United States troops shall leave before any negotiations or discussions can take place; and that the affairs of Viet-Nam shall be settled in accordance with the principles of the Communist fronts, the Fatherland Front in the North and the Liberation Front in the South. No consideration is given to the South Vietnamese people who have shown by their long and determined struggle that they do not wish to fall under Communist domination.

The SEATO Council, meeting in London in April this year, declared: "Every effort should be made to promote a satisfactory and lasting settlement of the conflict which would ensure the right of the South Vietnamese people to pursue their future in peace and complete freedom from external interference." (The French Government did not participate in preparing the communique; however, this statement is not contrary to France's previously stated position.)

The SEATO Council communique of London also declared it to be "self-evident that, if the aggression were ended, the Governments and people of both South and North Viet-Nam could live in peace and devote their energies to economic and social progress." Two proposals which would enrich the lives and hopes of the people of South-East Asia - whatever their ideological views - have been brought forward. The United Nations Commission for Asia and the Far East (ECAFE) is organizing an Asian Development Bank which, as the name implies, would assist in the promotion of economic progress. Also, President Johnson has proposed the establishment of a fund for a similar purpose and has pledged a billion dollar contribution. These proposals are open to Communist and non-Communist nations alike. Acceptance by nations from both sides would put the welfare of the people outside the sphere of political conflict. The respective national decisions will give an indication of the course of future events.

Eventually, the Communist nations must be made to realize that deprivation of liberty and destruction of human values cannot prevail against the rights and aspirations of man. The Marxist dogma of 1848, with its various subsequent turnings, cannot provide satisfactory answers to 20th century problems. Today we must build a world of peace based on justice, with penalties for those who violate these principles.

The Role of Collective Defence

The need for preservation of national sovereignty leads logically to collective defence. The eight signatories of the Manila Pact pledged themselves to seek peaceful solutions of international disputes and to act to meet the common danger in case of aggression by armed attack. They also agreed to co-operate in economic development.

In the interests of peace and freedom, it is the purpose of SEATO to provide military strength for the defence of the people and economic strength to serve them.

Military Defence

SEATO military defence activities during the year under review – as in previous years – included military planning, various conferences and meetings, and large-scale military exercises.

The SEATO Military Advisers held their 22nd meeting in London from April 28 to 30, 1965. This photograph was taken at the opening session of the conference, which took place at Lancaster House.

Approved For Release 2002/10/21 : CIA-RDP83-00036R001100170007-4
Military Planning

The Organization's military planning staff situated in Bangkok is continually engaged in preparation of defence plans for the Treaty Area. This permanent planning responsibility is carried out by selected officers from the various services of armed forces contributed by member nations.

The Chief of the Military Planning Office, under the direction of the Military Advisers, ensures that current defence plans are continually revised and refined to meet likely defence contingencies.

Conferences and Meetings

During the past year, two Military Advisers' Conferences were held: one in Bangkok in October 1964, and the other immediately before the SEATO Council Meeting in London in April 1965. As a normal procedure, throughout the year Military Advisers were constantly in contact with one another and with their representatives in the Military Planning Office in Bangkok.

Specialist committees which met at SEATO Headquarters during the year were:

Communications-Electronics Working Party	July 1964
Co-ordination Conference	September 1964
Intelligence Committee	November 1964
Co-ordination Conference	November-December 1964
Meteorological Committee	December 1964
Co-ordination Conference	February 1965
Logistics Committee	June 1965.

Military Exercises

Scheduled training exercises are held regularly to maintain the highest level of teamwork among member nations. Various types of land, sea and air manoeuvres have provided opportunities for member nation forces to fit them for any fighting role they may be required to carry out in defence of the Treaty Area. Joint exercises, starting with relatively simple operations in 1956, have evolved into complex manoeuvres involving tens of thousands of men. Co-operation, co-ordination and general skills have greatly improved with these combined operations, 29 of which have now been held.

During the training year 1964-65, two military exercises were held. The first was Exercise Log Train, a logistics exercise centred at Korat, north-east Thailand, in March 1965; and the second, Exercise Sea Horse, a maritime operation held in the South China Sea in May 1965.

Exercise Log Train, the first of its type, involved 900 officers and specialists of SEATO's eight nations. Its principal aim was to test the effectiveness of

Warships and aircraft close in on a submarine during SEATO Exercise "Sea Horse". The teamwork developed by the SEATO navies is illustrated in this typical combined operation.

SEATO logistical procedures. The 14-day exercise thoroughly tested the movement and supply techniques of SEATO forces. Exercise Log Train was officially opened by the Prime Minister of Thailand, Field Marshal Thanom Kittikachorn.

Exercise Sea Horse involved 31 naval ships and 130 aircraft of Australia, New Zealand, the Philippines, Thailand, the United Kingdom and the United States. The main purpose of the exercise was to test the ability of SEATO navies to escort a military convoy across the South China Sea. The maritime operation began at Manila and continued for ten days before ending at Bangkok. During that time, realistic convoy exercises were staged in which air, submarine and surface attacks were made on the convoy. Replenishment at sea also was practised during the 2,000 miles covered by the ships.

Bilateral Assistance between SEATO Member Nations

Mutual military aid programs have continued during the past year, enhancing considerably the combat effectiveness of member nation forces. Apart from the provision of equipment and training assistance, two major bilateral projects have been undertaken.

At Loeng Nok Tha, near Mukdaharn in north-eastern Thailand, a strategic airfield is nearing completion by United Kingdom Army engineers, assisted by Australian and New Zealand elements. The Prime Minister of Thailand, Field Marshal Thanom Kittikachorn, officially opened the airfield on June 17, 1965.

Approved For Release 2002/10/21 : CIA-RDP83-00036R001100170007-4

On the north-western outskirts of Bangkok, a large base workshop is close to completion. This Thai-Australian project, in which various types of vehicles will be rebuilt, is sponsored by the Australian Government and the Thai Ministry of Defence under the auspices of SEATO. Thailand has contributed about 60 per cent of the cost in the form of buildings, accommodation and other site facilities, while Australia is providing machine tools, workshop equipment, structural steel and technical staff to supervise installation of equipment and to train Thai personnel, at a total cost of £A396,000. The workshop will soon be capable of rebuilding 20 vehicles per week.

To provide basic training for future technical supervisors, foremen, skilled workmen and instructors of the Royal Thai Army, Navy and Air Force workshops and schools, a SEATO Military Technical Training School was established six years ago by the Thai Government, with assistance in the form of staff, equipment and training aids from Australia. As a second element of the Skilled Labour Project in Thailand, the school has since become a going concern, offering a three-year course to some 200 students. The Australian instructional staff, which had served at the school since its establishment, completed its mission in January 1964.

Rear Admiral Satap Keyanon (left), of the Royal Thai Navy, on the flight deck of the Australian flag ship, HMAS Melbourne, with the Flag Officer Commanding the Australian Fleet, Rear Admiral T.K. Morrison. Admiral Satap visited the Australian carrier by helicopter during SEATO Exercise "Sea Horse", staged in the South China Sea.

Approved For Release 2002/10/21 : CIA-RDP83-00036R001100170007-4

The Prime Minister of Thailand, Field Marshal Thanom Kittikachorn, reads the commemorative plaque he had just unveiled at the official opening of a new strategic airfield at Loeng Nok Tha, North-East Thailand. At left is the British Ambassador to Thailand, Sir Anthony Rumbold. The airfield was built by army engineers from Britain, Australia and New Zealand as a SEATO contribution to Thailand's defence.

Defence Against Subversion

Communist parties use many tactics of subversion. They engage in widespread propaganda: radio, pamphlets, news releases, books, cultural programs. They create "front organizations", ostensibly innocuous, whose purpose it is to subvert. They join groups of political parties in a "united front" in which they maintain their own strict party discipline and design. They form secret cells to bore from within societies. They set up puppet "national liberation" movements or "patriotic fronts" which are neither national, free nor patriotic.

These are some of the tactics of Communist subversion. Constant vigilance is required to guard against these foreign-dominated activities in a nation.

The primary responsibility in countering subversion rests with the nation itself. However, SEATO can best serve by collecting and analyzing reports of Communist activities in the area. This co-ordination is carried out through the Special Assistant for Counter-subversion and the Research Office at SEATO Headquarters, and through the regular meetings of the Intelligence Assessment Committee which is composed of representatives of member nations.

In addition to this overall evaluation of the threat, SEATO also provides facilities for focusing attention on specific problems of member nations and for channelling needed assistance in training or materials.

Economic Situation & Mutual Assistance

Despite international disturbances which made the situation in South-East Asia markedly more critical during the year under review, economic progress among the Asian members of SEATO has been satisfactory in terms of national development plans and SEATO's efforts to foster closer economic co-operation among member countries. All the three Asian members—Pakistan, the Philippines and Thailand—have registered significant advances which provide grounds for sustained optimism.

Under its Second Five-Year Plan, which ended on June 30, 1965, Pakistan had an average annual growth rate of approximately 6 per cent, a considerable advance over the 2.7 per cent annual growth rate achieved during the preceding decade, 1950-60. With a growth rate of over 5 per cent during the year 1964-65, the overall increase in gross national product at the end of the period came close to 30 per cent. This exceeds the planned target of 24 per cent by a wide margin.

The industrial sector, which registered a growth rate of 15 per cent, contributed 12.8 per cent of the country's gross national product. The most notable gains on this account were made in the fields of cotton textiles, jute manufactures, sugar, vegetable oil, cigarettes, fertilizers, chemicals and electrical goods.

Export earnings recorded a growth rate of 40 per cent as against the estimated growth rate of 30 per cent in the gross national product. As the country embarks on its Third Five-Year Plan, high priority is being given to further increases in agricultural and industrial production, as also to the narrowing of the gap between foreign exchange earnings and import requirements through the expansion of the production of exportable surpluses and the promotion of domestic substitutes for imports.

The healthy performance of the Philippine economy during the year is indicated by the growth of production in practically all sectors. Manufacturing showed a robust 10.7 per cent expansion. Mining registered a 6.3 per cent increase in output while agricultural production advanced by 6 per cent, export crops gaining about 15 per cent in the first half of the period. Employment went up in every major non-agricultural line and more than 8,000 new business enterprises were organized during the year. Foreign exchange receipts from exports exceeded import payments by about \$US29 million for a favourable trade balance. Gross national product increased by 6.2 per cent over the previous year.

The economy of Thailand showed an improvement over the previous year.

Approved For Release 2002/10/21 : CIA-RDP83-00036R001100170007-4

Output of major agricultural, industrial and mining products increased markedly. Rice production, which went up to a record level of 10.17 million tons, was an important factor in raising the country's international reserves by about \$US69.1 million and in lessening the country's overall trade deficit of the previous year by almost 50 per cent.

Economic co-operation and mutual assistance among SEATO countries continue strongly. A SEATO group of economic experts met in Bangkok from February 22 to March 5, 1965, and in a wide-ranging survey recommended a number of specific measures for the improvement of economic relations among the member nations. Topics covered by the group, which was composed of 20 experts and advisers from all eight member countries, included trade, agriculture, industry, communications and other economic activities.

SEATO assistance to the Asian member countries takes many forms. During 1964-65, Australia, whose special SEATO aid program amounts to some \$US2,250,000 a year, was responsible for the supply of machinery, electrical equipment and other services for various technical schools in Pakistan, as well as to the SEATO skilled labour and cholera research projects in that country. Passenger motor buses were given to the Philippines. In Thailand, Australia is providing an adviser to assist in the establishment of the Hill Tribes Research and Training Centre at Chiangmai, and vehicles for the centre. Technical assistance and equipment are also being provided for a radio transmitter project at the north-east centres of Khonkaen, Korat and Ubol.

The Hill Tribes Research and Training Centre at Chiangmai, which was established in 1965. Several SEATO member nations contributed to the establishment of the centre.

Members of the Queensland Parliament inspect machinery at the Vehicle Rebuild Workshop at Rangsit, near Bangkok, a new Thai-Australian project under SEATO. From left: Captain A.G. McFarlane, Australian Services' Attache at Bangkok, Mr. K. Spann, Mr. M.H. Thackeray, Mr. H. Richter (leader of the parliamentary group), Mr. W.M. Ewan, Lt. Col. R.D. White (senior Australian project officer), Mr. J.E. Duggan and Mr. S.R. Ramsden.

France is extending technical assistance to the project for the restoration of the Phimai ruins in Thailand and has provided equipment for the Thai-SEATO Regional Community Development Technical Assistance Centre at Ubol, north-east Thailand.

New Zealand has provided services and equipment to the Community Development Centre at Ubol and is contributing with other member nations to the scholarship fund of the SEATO Graduate School of Engineering. Donations in the form of field equipment have been made to the Thai Border Police.

The United Kingdom has continued to contribute equipment and technical experts to the SEATO Graduate School of Engineering and the Pakistan-SEATO Cholera Research Laboratory. During the year, it has also made contributions to the Community Development Centre at Ubol, the SEATO Skilled Labour projects and the Hill Tribes Centre in Chiangmai. Two mobile medical units are due to arrive in Thailand shortly as a British contribution to the work of the Mobile Development Units in sensitive areas of the country.

Approved For Release 2002/10/21 : CIA-RDP83-00036R001100170007-4

The extensive economic aid programs of the United States in South-East Asia include assistance to the various SEATO projects, particularly in the fields of education, medical research, community development and improvement of communications. The massive aid program for South-East Asia, announced by President Johnson early this year, provides a forecast of benefits which would directly or indirectly affect the Asian members of SEATO.

Students at work in the structures laboratory of the SEATO Graduate School of Engineering in Bangkok.

Approved For Release 2002/10/21 : CIA-RDP83-00036R001100170007-4

Leading academic figures from South-East Asian countries came to Bangkok in March 1965 to take part in the Seminar on Engineering Education sponsored by the SEATO Graduate School of Engineering. Here, Dean Piset Pattabhongse, of the Faculty of Engineering of Chulalongkorn University, Bangkok (left), Dr. Oscar Baguio, Dean of the Engineering College, University of the Philippines, and Dr. Syed Mahmood Alam, Principal of the N.E.D. Government Engineering College, Karachi, Pakistan (right) are shown in discussion.

SEATO Projects

SEATO Graduate School of Engineering

The SEATO Graduate School of Engineering in Bangkok completed its fifth year of operation on September 8, 1964. Thirty-seven master's degrees were awarded in March 1965: 8 of the graduates were from Pakistan, 7 from the Philippines, 3 from Taiwan and 19 from Thailand. To date, 111 graduates have received degrees from the school.

For the academic year 1965-66, there is an enrolment of 94, of whom 56 are first-year students, carefully selected from a great number of applicants. Thirty-eight students are in their second and final year of study. Of the total enrolment, 18 are from Pakistan, 29 from the Philippines, 41 from Thailand, 2 from Malaysia, 1 from Hongkong, 2 from Taiwan and 1 from South Viet-Nam. Applications for admission from graduates in all South-East Asian countries are considered.

Approved For Release 2002/10/21 : CIA-RDP83-00036R001100170007-4

The school now offers majors in hydraulic, structural, transportation and public health engineering. The current teaching staff is drawn from France, Thailand, the United Kingdom and the United States.

Special lectures, seminars and conferences are sponsored by the school in addition to academic courses. The school also undertakes research projects for governmental and private organizations and receives direct income on this account.

The school has achieved a reputation for high standards in post-graduate engineering education and is fulfilling a great need in South-East Asia. An expert study group (composed of leading academicians in engineering from the member countries), which met in Bangkok in December 1964, made a list of recommendations relating to its future.

The school is at present supported financially on the basis of annual grants but efforts are being made to give the institution a permanent financial foundation.

Skilled Labour Projects

In Pakistan, the Philippines and Thailand, national efforts to meet the increasing demands of developing industries for trained workers and skilled technicians are being complemented by the SEATO Skilled Labour Project.

There are now two SEATO skilled labour training centres in Pakistan: one at North Nazimabad, Karachi inaugurated on May 3, 1963, and the other at

The SEATO Technical Training Centre at Mirpur, Dacca, East Pakistan, held its first graduation ceremony in March, 1965. The Provincial Minister of Finance, Mr. Hafizur Rahman, hands a certificate to one of the 123 graduates.

Approved For Release 200

036R001100170007

An instructor demonstrates welding techniques to a student at the SEATO Military Technical Training School, Bangkok.

Mirpur, Dacca, inaugurated on February 3, 1964. These centres, which have a total enrolment of some 900 students, provide a course lasting 18 months and offer training in basic skills in the machine tool, electrical and woodworking trades. They also have facilities for the training of teachers in technical education. One indication of the need for these centres is the heavy demand for enrolment. The project in Pakistan, sponsored by SEATO, is supported by the Governments of Pakistan and the United States, with assistance in the form of equipment and books from the United Kingdom.

In Thailand, the SEATO Skilled Labour Project has been responsible for the establishment of 20 trade training schools in provincial cities and a teacher development centre in Bangkok. About 2,300 students graduated from these schools in 1965. There is a total enrolment of 7,444 students for the academic year 1965-66. The schools offer three-year training courses in automotive and diesel mechanics, building construction, machine shop techniques, welding and sheet metal work, basic electricity, radio and telecommunications. The Teacher

Approved For Release 2002/10/21 : CIA-RDP83-00036R001100170007-4

Development Centre, which has an enrolment capacity of 280 trainees, provides training for teachers for the project schools and other technical training establishments.

As the program in Thailand is now well established, outside financial support has virtually ceased. The aid project formally phased out on June 30, 1965, after almost seven years of work. The United States contributed \$US1,835,000 to the total cost of the project and the Thai Government \$US900,000 in baht from the Counterpart Fund. The United Kingdom made contributions of machine tools, published text material, automotive and diesel engines and transport for supervisory travel, worth in all \$US80,000.

The SEATO Skilled Labour Project in the Philippines has been responsible for the completion of a survey of labour market information and a pilot apprentice training program. Equipment has also been provided for the textile training department of the Marikina School of Arts and Trades which now offers a variety of trade courses.

Telecommunications Project

SEATO's interest in telecommunications dates from 1959 when it was decided to improve the telecommunications system for gathering and transmitting meteorological and aeronautical information between the Asian member countries. In 1961-62, the Thailand - Philippines section of the project was approved.

Eighty-nine teachers from 20 SEATO vocational training schools in the provincial centres of Thailand attended a seminar at the Teacher Development Centre in Bangkok, in April 1965. Shown here at a session on radio and telecommunications are, left to right, Mr. Serm Srilohapan, from Songkhla, Mr. Thanit Savetvajaree (instructor), Mr. Charoon Ruangklin from Tak, and Mr. Sanan Chiemmuangpak from Ubol.

Approved For Release 2002/10/21 : CIA-RDP83-00036R001100170007-4

All initial planning and engineering for the Thai element have been completed and about 98 per cent of the major equipment and supplies needed have been received from the United States. The installation of transmitters and circuits, as also the installation of all message centre terminal equipment in a new communications centre, and of meteorological equipment at the Meteorological Department of Thailand, are nearing completion. Many technicians have completed further training in the United States.

A report on the Philippines element of the project records progress in the installation of equipment and states that the last three of seven Filipino participants scheduled for training in the United States are expected to complete their courses in 1965. In-service training has been started in Manila for personnel engaged in the installation of the equipment.

The SEATO Meteorological Telecommunications Project is one aspect of the broadening interest of the Organization in the field of telecommunications.

A SEATO Expert Study Group on Telecommunications met in Bangkok from June 28 to July 2, 1965, and made recommendations for improvements to communications among the SEATO countries. The experts' report, which covers cable, troposcatter and microwave links in the region, is now under consideration by member countries.

Medical Research

Activities in medical research under SEATO sponsorship are providing part of the essential background to economic and social advancement in South-East Asia. Three SEATO projects in this field are now well established.

Founded in Bangkok in 1960, the SEATO Medical Research Laboratory has five departments: bacteriology and immunology, medical zoology, medical entomology, pathology and virology, and a special projects division. As a centre for the study of major diseases common to countries in South-East Asia, their means of transmission and social background, the laboratory has made significant contributions to scientific knowledge. It has been responsible for the identification of the virus and carrier of haemorrhagic fever and the identification of the liver fluke parasite and its life cycle.

The laboratory, which receives its main support from Thailand and the United States, is advancing its research studies on malaria, haemorrhagic fever, viral hepatitis, poliomyelitis, venereal disease, encephalitis, liver, lung and blood flukes, rickettsial diseases, enteric infections, melioidosis, anthrax, leptospirosis and rabies. Aside from research activities, the laboratory provides training for medical graduates and hospital technicians. Eminent medical specialists from various countries have visited the laboratory and have given lectures and participated in conferences.

An extensive bird-banding program has been undertaken in Thailand by the SEATO Medical Research Laboratory to add to knowledge of the migratory patterns of various species and to determine whether birds are significant disease carriers. Dr. Joe Marshall (centre) releases a swallow after banding. Working with him are Mr. Noel Kobayashi (left) and Mr. Ben King.

SEATO Clinical Research Centre

To meet the need for a centre which would find ways of improving diagnosis and the treatment and medical management of patients and would train teachers in medical education and the basic medical sciences, SEATO established a Clinical Research Centre in Bangkok in 1963.

The Clinical Research Centre has executive and scientific operational staffs, and areas of investigation are: nutritional studies – initially thiamine deficiency and metabolism, anaemias – studies of haemoglobin types and enzyme-deficiency, heart disease, malaria, and bladder stone research. These projects create the framework for the research now being done, but this will probably be modified in form and function with project changes to include many diverse clinical research problems in South-East Asia.

An excellently equipped five-storey building for the centre is scheduled for completion this year by the Thai Government. The wards will accommodate forty patients, chosen from other hospitals in Bangkok and outlying areas. The biochemistry laboratories will form the core of the centre's work and there will

also be diagnostic procedural facilities, operating rooms, X-ray equipment and a radio-isotope section. The cardiac catheterization clinic will be in the centre's new building. The centre's equipment affords facilities for testing and medical research that, in many instances, cannot be found elsewhere in South-East Asia.

It will offer facilities for research and training in cardiology, metabolism and endocrinology, renal diseases, gastro-intestinal and infectious diseases, nutrition, trauma, radiology, nuclear medicine and radio-isotopes, microbiology, biochemistry and biophysics. It will also provide opportunities for research fellows working for master and doctoral degrees from their own universities to undertake field studies in biochemistry, bacteriology and physiology.

Pakistan-SEATO Cholera Research Laboratory

The gravity of cholera in the countries of South-East Asia led SEATO to sponsor cholera research in Bangkok in 1959. Research activity was transferred in 1960 to Dacca, East Pakistan. This is the historic seedbed of cholera and the most significant area in the world for the study of the cholera patient, his environment and the organism itself.

The identification of the life cycle of liver fluke, a disease prevalent in North-East Thailand, is one of the achievements of the SEATO Medical Research Laboratory. Here, Major Dale Wykoff, former Chief of the Department of Medical Zoology, goes over stages in the parasite's life cycle with laboratory technician Miss Bunsiri Pruk-udom.

Approved For Release 2002/10/21 : CIA-RDP83-00036R001100170007-4

The Cholera Research Laboratory has since been designated as the official cholera treatment centre for the Dacca area.

Research studies during the past year have covered five general functional areas: studies of the patient and the disease, the pathogenesis of cholera, studies of the vibrio, community studies and vaccine study. Significant findings have been made in each of these areas. The efficacy of simplified ways of treatment is under continual test and better definition is being made of the symptoms and causes of a group of cases known as "non-vibrio cholera". A means of almost instantaneous specific diagnosis of the majority of cholera cases has been developed. The study of vaccines is being carried out in a group of 23 villages and is currently being extended to 35 additional villages.

The Cholera Research Laboratory is supported principally by Australia, Pakistan, the United Kingdom and the United States. All member nations are represented on the laboratory's panel of expert consultants.

Pakistani medical staff watch as Dr. Alexander Langmuir (left) Chief of the Epidemiology Section of the Communicable Disease Center, U.S. Office of Public Health, and Dr. Robert Oseasohn, Chief of Epidemiology at the Pakistan-SEATO Cholera Research Laboratory, examine a patient. They were visiting a field hospital for cholera victims established in a barge at Matlab Bazar, 40 miles from Dacca, where the laboratory is situated.

Delegates to the SEATO Seminar on Community Development, held at Bangkok in July 1965 made a one-day visit to the Thai-SEATO Regional Community Development Technical Assistance Centre at Ubol, North-East Thailand. They also inspected community development projects in villages. Here, at Bang Nong Koom, the preparation of silk yarn for weaving is demonstrated to SEATO Secretary-General Jesus Vargas (left), Mr. Sukit Chullanandana, Chief of the Training Division, Community Development Department, Ministry of the Interior, and Mr. G.T. Linsley (right) Australian participant in the seminar.

Community Development

The Thai-SEATO Regional Community Development Technical Assistance Centre at Ubol supports the Thai Government's community development program in the north-east in terms of technical services, research, supervision and training. SEATO member nations helped to establish the centre in 1962 and 1963 by contributing the services of experts and by providing equipment and livestock.

The staff of the centre is composed of technicians and specialists from Government agencies concerned with various aspects of the program. It is equipped with construction equipment and materials to assist local community development or "self-help" works projects.

The centre arranges training courses for village leaders. It provides information to farmers on improved methods of agriculture and livestock management and is engaged in the improvement of water supplies and public health education activities. Through its community education program, the centre informs the people of the Government's work for rural development and helps to establish confidence and co-operation between officials and village folk.

In July 1965, SEATO sponsored a Seminar on Community Development in Bangkok. Sixteen expert participants, representing all member countries, took part and over 200 observers attended the seminar sessions.

Hill Tribes Research

In August 1963, the Ministry of the Interior of the Thai Government submitted a request to SEATO for assistance in providing equipment for a Hill Tribes Research and Training Centre at Chiangmai in northern Thailand. The centre, now in operation, serves the needs of the Hill Tribes Program of the Ministry of the Interior by providing facilities for research and for the training of research workers and officials working among the tribes.

Australia has contributed motor vehicles and the services of an anthropologist who is the adviser to the Ministry of the Interior on the establishment of the centre.

The United Kingdom has given books for the centre's library; equipment has been provided by the United States.

Cultural Program

Through a well-established cultural program, SEATO aims at promoting better knowledge, understanding and friendship among member nations and, indeed, it is already setting an example in co-operation in this field for the entire region of South-East Asia.

In addition to being a positive contribution to the material advancement of the Asian member countries, the cultural program aims to preserve and promote all that is good and healthy in their cultural heritage and traditions.

A Conference of Heads of Universities, held in Karachi in 1960 under the aegis of SEATO, resulted in the commissioning of a survey of Asian universities to determine the problems that stand in the way of a freer exchange of students. A Commission on University Equivalences met in Bangkok in 1963 and drafted a convention, the aim of which is to facilitate a freer exchange of scholars. The convention will be signed at Manila by representatives of the Governments of Pakistan, the Philippines and Thailand on September 8, 1965, the eleventh anniversary of the founding of the South-East Asia Treaty Organization. This instrument assumes added significance as the first of its kind in Asia.

A study of the iodine content of various materials and their relationship to the incidence of goitre was completed in 1965 by Dr. Romsai Suwanik, Professor of Radiology at Siriraj Hospital and Medical School, Bangkok, with the aid of a SEATO research award. Dr. Romsai (wearing glasses) is shown explaining the function of the equipment he used to Dr. Artemio S. Rodriguez, SEATO Cultural Officer (right). Operating the equipment are Miss Somlak Kositakarm, a physicist, and Dr. Rudee Pleehachinda.

Mr. K.A. Haseeb of Pakistan, SEATO post-graduate scholar at the University of the Philippines, with the apparatus he designed for the rapid coating of tablets while working for his master's degree in pharmacy. Mr. Haseeb's invention has aroused wide interest in the pharmaceutical industry.

In the sphere of education, the Organization has established continuing projects. It sponsors two scholarship plans. The first of these provides grants for deserving undergraduates in the three Asian member countries to enable them to complete the final year of their first degree course. Unlike other SEATO cultural awards, which are directly administered from Headquarters, the undergraduate scholarships are allotted by national authorities who receive an annual grant for this purpose. Some 170 awards have so far been given.

The second plan provides twelve post-graduate scholarships, distributed equally between Pakistan, the Philippines and Thailand, and available to graduates for studies leading to a higher degree in a university of an Asian member country other than their own. Scholars are thus provided with the opportunity not only to improve their academic qualifications but also to gain first-hand experience and insight into the people, the language and the customs and traditions of their host country. These scholarships cover a period of from one to three years depending on the requirements of particular courses of study. Since the inauguration of the scheme in 1960, two scholars have earned doctorates and 29 master's degrees. Thirty-five scholars are currently at work.

Fellowships are also provided for senior scholars intending to do post-doctoral work. Nationals of all member countries are eligible. Eleven awards are available each year for research, teaching or for specialized training. Eighty-one fellowships have been availed of since 1958.

SEATO also provides grants at the highest academic level. Each year, at the request of the Asian Member Governments, SEATO makes available the services of a professor from a specified member country for a requested discipline. Since the inception of the professorship program in 1959, eleven professors have served seventeen annual terms. SEATO professors are engaged not only in teaching and counselling but at times also in independent research.

Lt. Gen. Jesus M. Vargas of the Philippines was formally installed in office as Secretary-General of SEATO at a ceremony at SEATO Headquarters on July 1, 1965. In this photo, the Australian Ambassador to Thailand, Mr. A.H. Loomes (right) who, as Chairman of the SEATO Council Representatives for July, invested Gen. Vargas with the office of Secretary-General, delivers his address. Seated at the table with Mr. Loomes are Gen. Vargas (left) and the Minister of Foreign Affairs of Thailand, Mr. Thanat Khoman.
