BOILER CONSTRUCTION AT HOHENTHURM PLANT

[Redacted]

[Redacted] the Hohenthurm Plant [Redacted] visit, of some people from the ZKB (Central Construction Office). The purpose of the visit, was to discuss the repairs to be done on the boilers of the ships "Mozhaisky" and "Lensovyet". An investigation showed that the boilers will practically have to be rebuilt entirely. For the "Lensovyet" approximately 20 percent of the blueprints are ~~not~~ available. For the "Mozhaisky", blue prints were made by the shipyard Wismar, but they will have to be re-checked. The sheet casing for the boilers have to be done over entirely.

The following dead-lines for completion were named: Mozhaisky - July 1, 52, Lensovyet - October 1952. The Hohenthurm Plant claims that it is impossible to meet this dead-line.
