DETAILED DESCRIPTION OF THE SEVEN KODACHROME TRANSPARENCIES ON POTATOES

- X #1 Excellent potato field - full bloom stage.
- #2 Excellent potato field - pre-bloom stage.
- #3 Excellent potato field - pre-harvest stage (note some of plants have still not died down).
- #4 Poor potato field - pre-bloom stage (spotty growth due to fertilizer scald and poor planting technique).
- X #5 Potato field - early stage; center row and two left rows dwarfed due to lime insufficiency; right rows and extreme left rows healthy young plants.
- #6 Potato field - bloom stage; foreground plants small and weak due to insufficient lime; center rows normal and healthy.
- #7 Potato field - unknown stage (either pre- or post-blooming stage); severe infestation of late blight disease; green plants are of disease resistant varieties.
