Braunbek, Werner.
NEW APPROXIMATION METHOD FOR THE DIFFRACTION BY A PLANE SCREEN. [1960] 10p.
12 refs.
Order from FLA mi\$1.80, ph\$1.80 61-10419

Trans. of Zeitschrift für Physik (West Germany) 1950, v. 127, p. 381-390.

In addition to the Kirchhoff approximation, a series of newer approximation methods for the problem of the diffraction of a scalar wave by a plane screen with an opening or by a plane disk are discussed. None of them give exact results for small wave length (large ka), but neither do the exact solutions which are known in specific cases since their series converge poorly for large ka . In order to fill this gap, a new approximation method is developed which is specifically fitted to large ka and which makes use of substitute boundary values on the screen which have been taken from the exact Sommerfeld solution for diffraction by a half plane. (Physics--Wave Propagation, TT, v. 5, no. 7) (over)
