The adsorption bands of the components are condensed  
to the chromathermographic analysis which permits  
their separation. In the desorption with air (115  
ml./min.) at 120°, benzene is not desorbed, at 240°  
toluene and benzene are desorbed quantitatively but not  
separated, but at 160° they are quantitatively desorbed  
and separated. The identification of the components  
was based on the measurement of the combustion heat  
effects of the separated components. The accuracy of
