DESCRIPTORS: *Morphology, Taxonomy, *Heat
production (Biology), *Actinomycetales, Streptomyces,

Eleven different thermophilic ray fungi (Actinomycetae)
were isolated from stable-manure of different etiology
and composition, and their morphological and physio-
logical properties were investigated. All of them belong
to the family, Streptomycetaceae. They are described
in detail. On the basis of the observations on these
types, the Actinomycetae were reclassified systemati-
cally, and 3 new genera (~~Thermomonospora~~ Thermo-
