11/16/44

DESCRIPTORS: Electron diffraction analysis, *Photo-
graphic emulsions, *Beta particles, Infrared images,
Optical images, Temperature, Ions, Ionization.

The relationship between the reciprocity effect and
temperature, which is of special importance for the
fading process; was investigated. Results showed that
the activation energy determined in the case of the ef-
fect of ionizing particles by the isodensity curves, can
be used as a measure of dispersion of the latent image.
