The volatility of helium in nitrogen-helium and helium-
methane systems in the temperature interval from 68
to 150.3 K and at pressures of from 4 to 215 atm is
calculated from data obtained in an experimental
investigation of liquidvapour equilibrium in these mix-

and 215 atm the solubility of helium in liquid nitrogen
and methane can be calculated with sufficient accuracy
from the Krichevsky--Kazarnovsky equation. The

DESCRIPTORS: *Nitrogen, *Helium, Liquids, Vapors,
Phase studies, Chemical equilibrium, Determination.

An experimental unit is described suitable for determination of the liquid-vapor equilibrium at pressures up to 200-250 atm. by the circulation method. Determination of p-x diagrams has been carried out for the system nitrogen-hellum at 68, 77.3, 90.1, 107 and 111.5°K. The obtained data were compared with the experimental data reported by other authors. (Author) (Chemistry--Physical, TT, v. 6, no. 9)
