A new method and the relevant equipment is described
for the measurement of compressive forces with ultra-

partly permeable to ultrasonic waves. From this it
has been established that the extent of the ultrasonic
energy passing through or reflected on the dividing
layer is, under certain conditions, proportional to the

DESCRIPTORS: *Plasma physics, Conductivity, *Electric discharges, High frequency, Electric currents, Direct currents, Electrons, Kinetic theory, Gas discharges.

An expression is sought for the complex conductivity of the plasma of an arc discharge supported by a strong d-c current for the case in which a very weak high-frequency current that does not affect the condition of the plasma passes through it. The agreement between the results found and previous notions is satisfactory. (Author)
