DESCRIPTORS: *Polymers, Deterioration, Mechanical
properties, Oxidation, *Plastics, Temperature,
Antioxidants.

Natural and synthetic polymers containing only carbon
and hydrogen are subject to autoxidation, which limits
their life and utility, unless countered by suitable
means. In the present study, the fundamental aspects
of the phenomenon (the kinetics, energy of activation)
are discussed, as well as the methods used in studying
it, the effects (of autoxidation) on the mechanical prop-
erties of the polymers, and means for combatting it
(antioxidants). (Translator)
