Clinical diagnosis of psychiatric diseases is treated mathematically by assigning values to the patient's symptoms or complaints. The examiner assigns value-coefficients to the symptoms according to the disease which they indicate; i.e., symptom A may be more important in disease S than in disease T. If disease S which also includes symptoms B and C is indicated, the examiner next looks for symptoms B and C. Symptoms (Biological Sciences--Neurology and Psychiatry, TT, v. 10, no. 12) (over)
