Methanol solution polymerization of vinyl acetate (VAc)  
was conducted at 30°C and at 0°C with respect to redox  
systems regarded as being effective up to now, redox  
systems which are expected to be effective, and, for  
comparison, a number of single initiators which have  
been claimed to be low-temperature active. The objec-  
tive was to acquire information regarding redox low-  
temperature solution polymerization of VAc.
