DESCRIPTORS: *Well logging, *Geophysical prospecting,
*Rock, Density.

A new method of geophysical exploration in boreholes is briefly described, electric logging to determine the density of rock, initially suggested by M. M. Sokolov and developed under his guidance by the author with the assistance of N. I. Karabanov. The method is based on the existence of a definite relationship between the scattering of gamma radiation and the density of rocks. (Earth Sciences--Geology, TT, v. 6, no. 11)
