DESCRIPTORS: *Surface-active substances, Synthesis
(Chemistry), *Alcohols, *Ethylene oxide, *Catalysts,
*Amines, Bases (Chemistry), Reaction kinetics,

It was found that tertiary amines are effective catalysts
for the reactions of ethylene oxide with higher fatty
alcohols at lower temperatures. The fact that a
maximum exists at about 80°C suggests a difference in
the catalytic mechanism from the case when KOH is
used. Although the more basic amines exhibit greater
