Trans. of Veterinariya (USSR) 1962 [v. 39] no. 12,
p. 58-61. (Abstract available)

DESCRIPTORS: Swine, *Influenza viruses, *Tissue
culture, Embryos, Cattle, Kidneys, Culture media.

Swine influenza virus can proliferate in a tissue culture
of cattle embryonic kidney, which is equal in its sen-
sitivity to this virus to chick embryos. The presence
of swine influenza virus in a tissue culture may be
determined by its cytopathogenic action, by hemagglu-
tination, or by hemadsorption. The most sensitive
method of indication of virus in tissue culture is the
hemadsorption reaction. (Author)
