Electromagnetic fields, Equations, Numerical
analysis.

The outer part of the permanent geomagnetic field is
studied from data taken during the period 1932 to 1958.
It is shown that such a part exists, and the hypothesis
that it stems from the radiation belts is discussed.

After unilateral destruction of the caudate nucleus,
slight behavioral changes of short duration (4-7 days)
are observed in rats; weakening of the orienting reflex
and sometimes circular movements towards the side of
the destruction, with head turned to same side. The
changes are marked, persistent (lasting a month or
more) and diverse changes are observed after bilateral
destruction of the caudate nuclei. Torpor and weakness

DESCRIPTORS: *Electric cables, *Insulating materials,
*Electric insulation, *Rubber coatings, *Clays,
Additives.

The electrical and physico-mechanical properties were
studied of cable rubbers filled with pyrophyllite, a new
mineral of Ukrainian origin. It is shown that pyrophil-
lite satisfies the requirements for dielectric fillers of
cable insulating rubbers when 50 to 60% of rubber is
introduced. The introduction of pyrophyllite into insu-
lating rubbers to replace talc is proposed.
