tion, Tests.

The waviness of surface on components operating under
condition of dry, semi-liquid and liquid friction brings
about a great wearing of the pairs. The supporting
power of a cylindrical bearing is diminished in the
presence of a wavy surface. The supporting power
(load-carrying capacity) of a planeparallel step bearing
is increased in the presence of waviness. There is an
optional ratio of spacing to the height of undulation
(Machinery--Engines, TT, v. 6, no. 3) (over)
