MEASUREMENT OF THE INSTANTANEOUS FORCE

p. 5-7.

The author presents in summarized form a method and
the results of measurements of the instantaneous nor-
mal component of the hydrodynamic forces acting on a
single blade of a vertical axis propeller. A NACA
symmetric blade profile with a semielliptic blade out-
line was used in the investigation. The results show
that the normal forces in the second half of the orbit
are generally smaller than in the first half. (David
