MEASURING THE PRESSURE OF SATURATED BORON

DESCRIPTORS: *Vapor pressure, Measurement,
*boron, Heat of sublimation, Thermochemistry,
Thermodynamics.

The study deals with the determination of vapor pressure within the temperature range of 1651-1764°K by Knudsen's effusion method. The boron vapor pressure depends largely on the S/K ratio. Saturation is reached in the chamber only when the S/K₀ ratio is larger than 15.000-20.000.
