lining was installed as a premelting unit to supply molten pig iron to the open hearth and the electric steel melting shops. Apart from making hot metal available to the open hearth furnaces the molten pig iron was intended to facilitate duplexing in the arc furnace after oxygen blowing in an LD converter, or direct casting from the latter. The technical construction, lay-out, and integration of the combined installation and the detailed design and construction of the LD converter plant are discussed. The special characteristics of the converter construction are described and the consequent advantages pointed out.
