p. 287-290.

DESCRIPTORS: \*Bacteria, \*Amino acids, Proteins,  
Cholera, Vibrio, Chromatographic analysis.

By means of dimetric chromatography on paper, the amino-acid composition of cholera and cholera-like vibriones, and saprophytic species of cocci were examined. Results showed that 16 known amino acids and one unidentified amino acid were found in the proteins of cholera and cholera-like vibriones. The amino-acid composition of cocci proteins agree in the main part with such vibriones.
