| <p>After an introductory discussion of today's knowledge about the structure of starch and about the mechanism of the micelle formation, several modified starch pre- parations are discussed, such as swell starch, starch with increased viscosity, pudding starch, thin cooking starch, micelle starch and soluble starch. The molecu- lar changes which permit to transform the qualities of the starch in adaptation to the momentary requirements in a useful manner are also discussed. (Author)</p> | |
