NEW DESIGN OF LOW PRESSURE DIAPHRAGMS
FOR STEAM TURBINES. [1960] [10]p. 8 refs.
[DSIR LLU] M. 2324.
Order from LC or SLA ml\$1.80, ph\$1.80 61-15465

Trans. of Energomash[Inostroyeniye](USSR) 1960
[v. 6] Mar, p. 32-35.

A description is given of a new design for a blade of sheath type for low pressure diaphragms of high power steam turbines. The blade is joined to the body of the diaphragm either by welding or filling the cavity with the same material used for the body of the diaphragm. A short description is presented of preliminary efforts to devise a simple, reliable and economic production technique. (Author)

Rough draft trans. of Akademiya Nauk SSSR. Doklady,
1957, v. 113, no. 5, p. 1057-1060.

A study was made to determine the role of the scalar effect upon the deformation capability and durability of metals in brittle, semibrittle, and completely tensile disintegration. The effect of a large amount of stored elastic energy is shown in large samples. In tensile disintegration it results in a quicker rate of disintegration of flaws and a lesser amount of real resistance to a break. In semibrittle disintegration it causes an earlier appearance of zones of crystalline structure and an increase in inclination to brittleness. In brittle disintegration its effect is a decrease of the value of elastic strength. Scalar effect at fatigue-induced disintegrations (Metallurgy--Structural, TT, v. 5, no. 12) (over)
