Trans. of Teploenergetika (USSR) 1958 [v. 5] no. 7, p. 13-17.

A method is given by means of which, on the basis of the equations of thermodynamics and of certain experimental data regarding the thermal properties of water and steam, the specific heat of steam on the saturation line can be calculated. Such calculations are made in the temperature range from 170 to 370° C. The calculation results and known experimental data are compared. (Author)
