Trans. of Grundlagen der Landtechnik (West Germany)
1956, v. 7, p. 11-27.

The interrelationship between the soil and agricultural
implements is considered. An analysis is made of
forces, stresses, and other physical changes of the
soil under tillage operations. The theoretical compo-
nents of work are compared with experimental values.
Changes to the physical characteristics of the soil by
machine tillage are examined.
