DESCRIPTORS: \*Blood chemistry, Diagnosis, Tests,  
\*Thiols, Titration.

The apparatus, chemicals employed, and the pro-  
cedures used for determining the blood sulphydryl  
groups by amperometric titration are described. It is  
suggested that this procedure can be widely applied in  
diagnosing specific pathology, or intoxications and in  
ascertaining the effectiveness of specific therapy. This  
method can be used in any regular biochemistry  
laboratory.

 (USSR) 1956, v. 20, no. 1, p. 73-86.

DESCRIPTORS: \*Continuous media, Elasticity, Plasticity,  
 Rupture, Internal friction.

An investigation is made of the two-dimensional limiting equilibrium of a connected medium with free contours, this being accompanied by rupture curves. Consideration is devoted to the limiting equilibrium of semi-arches and arches resulting from their own weight and an example is given of the determination of rupture
