Twelve cases of various urinary infections were
observed, 3 of which were eliminated at the outset
as renal tuberculosis was involved. In almost all
cases the infection was caused by *E. coli*, cases also
existing of combination of paracoli and *Proteus* orga-
nisms. The duration of treatment was 10 days on an
average. Although the number of cases was small,

*Boilers, Timing devices.

The possibilities of reducing the time lag of the change
of temperature signal for superheated steam were
investigated on a boiler type TP-230-2. Attention was
confined to the basic factors governing the time-lag
of the step change signal: time lag due to the super-
heater itself, time lag due to the detecting element and
