DESCRIPTORS: *Electron microscopes, *Electron
beams, Production, Triodes, Cathodes.

The usual triode system, with hot cathode, Wehnelt
shield and anode, used for beam production in the elec-
tron microscope, has been remodeled. By suitable
shaping of the Wehnelt electrode so that with regard to
illumination intensity, illumination aperture and life-
time it is equivalent to a system working with a con-
denser and moreover offers the advantage of very small
beam current and simple adjustability. (Author)
