The physical basis for the calibration of a brightness
tester is given together with detailed instructions for
the adjustment of the photometric linearity and the
effective wavelength of the Elrepho instrument. Sug-
gestions are given for a calibration service for the
Elrepho instruments by which, through a specific cali-
bration procedure, the Elrepho can be maintained at
the brightness scale prescribed in Tappi Standard
T 217 m-48. (Author)
