DESCRIPTORS: *Oils, *Lubricants, *Alkanes,
Separation, *Solvent extraction, Solvents, Liquid filters,
*Mineral oils.

The lowest filtrate solidifying points are obtained with
all the solvents suitable for deparaffination by work in
the phase region; thereby the paraffin residue is very
oleiferous. Oil-poor residues and unsatisfactory
solidifying points are obtained only by work in the homo-
geneous region, whereby the proportion of solvent with
the two-solvent process is put in so that one can filter
with as low temperatures as necessary without phase
