Trans. of La-Ya'aran (Israel) 1955, June, p. 7-11.

DESCRIPTORS: *Plants, *Classification, Israel,
Trees.

Sixteen species are described in this short survey, four of which are new to science. Most of the others are new to Israel or to Asia in general. A few species which are most important for afforestation and as ornamental plants, and whose classification has till now been uncertain, have been entirely clarified and may be classified by means of the given key, the use of which does not demand any special technical knowledge. Trans. of [Hoppe-Seyler's] Zeitschrift für Physiologische Chemie (West Germany) 1957, v. 307 [no. 2/6] p. 112-123.

Quantitative determination of small amounts of the lipemia clearing factor can be effected by determining the maximum clarification of a lipemic system obtainable with the aid of the factor. In the formation of the clearing factor in vitro, the yield corresponds to the amount of homogenate used, if plasma is used in excess. With the aid of suitable mixtures, a series of natural and synthetic mucopolysaccharides was compared with heparin for their capacity for forming
