SYNOPSIS: Electrolysis, Electric current, Dissociation, Anodes (Electrolytic cells, Metals, Electrodeposition, Electrochemistry).

Information is made of the factors influencing the
distribution power of electrolyte and it is concluded
on the basis of calculation that property can only lead
conclusion. The layout of flow tubes and calculation
their resistance covers a number of widespread
cases on this subject. It seems, in particular, that

Work was devoted mainly to run two experimental loops,

minor modifications were performed on these loops, to
improve operation. The corrosion and erosion loop be-
gan operation only. Its performance is not entirely sa-

DESCRIPTORS: *Trees, *Wind, Pressure, Resistance
 *Forestry, Quality control, Evapotranspiration,
 Plants, Growth.

Static calculations confirm the knowledge gained by
 experiments on the damaging effect of wind pressure on
 trees. The higher the loading limits of a type of tim-
 ber, the more resistant is the tree to the effect of
 wind. A thicker and shorter tree is more resistant
 than a thin and tall tree. Those with a narrow and tall
 crown resist the wind better than those with a wide
