THE USE OF BOLTS MADE OF LIGHT ALLOYS FOR  
THE MECHANICAL JOINING OF ALUMINUM CON-

Trans. of Revue de l'Aluminium (France) 1951 [v. 28,  
no. 182] p. 393-395.

DESCRIPTORS: \*Conductors, \*Aluminum, Electric  
connectors, \*Bolts, \*Aluminum alloys, Joints.

The use of high-strength bolts of light alloys for the  
mechanical joining of aluminum conductors makes it  
possible to keep the contact-pressure constant regard-  
less of variations of temperature. This avoids the risk  
of creep in case of overheating or of poor contact in  
case of cooling; such risks are likely to occur with steel  
bolts, especially if the temperature, during the placing  
operation, is rather high. (Author)

Manufacturing methods, Casting, Machinery.

The Properzi machine produces wire rod direct from molten aluminum leaving the electrolysis cells. The metal is poured into the triangular groove of a casting wheel closed over 180° by a band of mild steel the stock passes continuously through a special 13-stand rolling mill; the wire is wound in 1000-kg. coils, thus reducing butt welds required in the course of (Machinery--Manufacturing, TT, v. 10, no. 2) (over)
