<p>Trans. of <u>Revue Française d'Etudes Cliniques et Biologiques</u> (France) 1958, v. 3, no. 6, p. 558-584</p>	<p>143,263</p> <p>Office of Technical Services 1-9-61</p>
<p>An immunological study of 40 serum samples from 19 patients with disseminated lupus erythematosus revealed the presence in more than half the sera of anti-thrombocytic antibodies. The presence of anti-leukocytic antibodies was demonstrated by precipitin reactions and complement fixation. The substance in LED serum reacting with DNA is an antibody. The specific precipitation reaction and fixation of complement establishing the presence of these antibodies was present in all patients who had received little or no (Biological Sciences--Pathology, TT, v. 3, no. 4)(over)</p>
