Trans. of Riv[ista dei] Combustibili (Italy) 1954, v. 8,  
[no. 7/8] p. 526-544.

A thermal differential analysis showed that normal paraffin waxes with a lower molecular weight can give rise to two transition phenomena, while those of higher molecular weight show only one, and that the value of the transition phenomenon is influenced by the speed of cooling of the sample. Iso-paraffin waxes show transformation phenomena at the solid state in a manner analogous to normal paraffin waxes. (See also 61-10153)

Trans. of la Ricerca (del Combustibili (Italy) 1957,  
v. 11, p. 245-259.

A method based on the preparation of mixtures composed of aromatic extracts under examination with saturated oil (non-aromatic) of known structural composition, having a molecular weight of the same order, is proposed for the determination of the structural composition of aromatic extracts derived from the refining of lubricating oils, whose high content of C, H, and N does not permit the direct application of the equations and nomographs pertinent to fractions of "natural" petroleum. The physical constants are determined and the structural composition (Chemistry--Organic, TT. v. 5, no. 7)      (over)

I. Ronchetti, G.

Trans. of Rivista di Gastro-ent[erologia] (Italy)  
1959, v. 11, Nov/Dec, p. 409-415.

DESCRIPTORS: \*Sodium compounds, \*Peptic ulcers,  
\*Hydrogen, \*Cholates

161624

The effect of the administration of sodium dehydro-  
cholate upon the ulcers and the gastric acidity of rats  
which had undergone the Shay operation was investi-  
gated. It was found that this salt promotes the forma-  
tion and the development of the lesions, and increases  
the acidity.
