DESCRIPTORS: *Respiration, Physiology. *Diving,
Hypercapnia. *Lungs.

The increase of gaseous density under pressure raises
viscous resistance in the respiratory passages. Thus
effort of the respiratory muscles is accentuated.
Through too great respiratory effort the ventilation
will be restrained. Hypoventilation leads to a reten-
tion of carbon-dioxide. The symptoms of the so-called
rapture of the deep are, in fact, consequences of hy-
percapnia and of acidic respiration. The increase in
partial pressure of oxygen favors the tendency to hyp-
