MEMORANDUM FOR: Chiefs, Key West, Panama and Paraguay Bureaus

THROUGH: Chief, FEB/ED and Chief/ED

FROM:

[redacted]
Regional Engineer for the Americas

STAT

SUBJECT: Agenda for Quarterly Regional Engineer's Trip

During the quarterly regional engineer's visit in March the following items will be given consideration.

Paraguay

1. Installation of the Watkins-Johnson high speed remote system. If system has already been installed, check system operation and insure that all concerned bureau personnel understand its operation.
2. Inspect the recently repaired rhombic antenna that was severely damaged by high winds.
3. Try to correct problem with the video recording system so that programs can be recorded in color.
4. Get first hand idea of the reception capabilities of Antelco's new rotatable log periodic antenna.

Panama

1. Visit each remote receiver location for familiarization with the telephone remote system. [redacted] should accompany on trip to the remote receiver sites.
2. While visiting remote receiver sites look for possible ways to improve reception.

STAT

SUBJECT: Agenda for Quarterly Regional Engineer's Trip

3. Discuss the possibility or necessity of using telephone fax equipment to send newspaper articles from the remote sites to the bureau. If determined desirable and equipment is available for rent locally this could be tested during the visit to the remote sites.

4. Install and test new Autodin Mode 1 terminal equipment if all equipment is on site at the time.

Key West

1. Check progress of antenna renovation and assist if necessary.

2. Assist in planning new video distribution system for the bureau.

3. Inspect the medium wave loop array antenna for the possibility of reorienting the present loops or installing additional loops.

In addition to the above items the bureau chiefs may have other items that require attention.

The amount of time spent at each bureau during this trip will be relatively short because of the necessity to visit all Panama Bureau's remote receiver sites.
