

DATA COLLECTION AND REPORTING
WORKING GROUP

The purpose of the Data Collection and Reporting Working Group is to define the data collection and reporting requirements necessary for Federal agencies to ensure an accurate and credible record of energy conservation in the Federal Government. Activities will include examining the data collection, monitoring and reporting procedures for existing energy programs, determining the present costs/benefits of such procedures, the validity/utility of various data pools, fine-tuning of data collection systems, and promoting the speed and efficiency of information transfer. The objectives will be to identify, gather, and update information needed by the Congress, OMB, the President, and DOE to effectively manage the Federal Energy Management Program. Also, to maintain this information at DOE so it can be accessed and quickly provided to top level management for both fiscal and technical decisions.

CHAIRMAN William Rhodes
Federal Energy Management Program
Department of Energy (Mail Stop 1H-031)
Forrestal Building - Room 1H-066
