LOGGED

Meet

25X1
SUBJECT:

Notes from the Technology Steering Panel Meeting
with RADM John Butts, DNI/USN, on 1 Sept 83 [Redacted]

25X1
1. The Technology Steering Panel (TSP) met with Rear Admiral John Butts on 1 September 1983. The purpose of the meeting was to solicit his views on future issues that the Intelligence Community will face (1985-1995 time period), and the Navy's plans for dealing with these issues. [Redacted]

25X1
2. Admiral Butts opened the meeting with a brief review of an R&D investment strategy recently completed by the office of the DNI. Copies of the study have been requested and will be available for any panel member who desires to review. The Admiral stated that a formal review process has been established to gauge the progress of implementation and provide any necessary redirection. [Redacted]

25X1
3. Rear Admiral Butts then presented three areas that he believed will pose serious and continuing problems for the Intelligence Community.

S-056/83

22 April 1983

MEMORANDUM FOR THE DEPUTY DIRECTOR OF CENTRAL INTELLIGENCE

SUBJECT: Joint National Intelligence Dissemination System (JNIDS) (U)

(S) The Joint National Intelligence Dissemination System (JNIDS) is the GDIP initiative to develop new analytical and collection management techniques and technologies to handle the intelligence data flood expected in the mid-1980's. I am providing this report because of the importance I attach to its success.

(S) These are the major elements of the JNIDS analytical R&D effort:

-- Build an intelligence information management system based on approved ADP programs, such as SAFE, IAIPS, and SOLARS/IDHS-80.

X (-- Determine the analytical and collection management potential of emerging technologies, such as very large-scale integration, very high-speed integrated circuits, optical readers, and artificial intelligence.

-- Develop a joint test bed to evaluate technology applicable to processing, tasking initiation, cuing, cross-cuing, and interaction between the processing system and data bases.

-- Focus initially on SLBM and SS-20 adaptive targeting.

-- Use real-world events to determine data level and flow and apply the lessons learned to JNIDS development. For example, CINCLANT's planned I&W demonstration against Soviet navy activity in June will be extremely valuable if the Soviets include a strategic SSBN exercise.

-- When the groundwork has been done, probably in FY 86-87, determine the features of the system and begin acquisition.

(U) DIA, the Military Services, SAC, and NAVINTCOM are collaborating on JNIDS under the Director of Naval Intelligence, who is my executive agent for the program. NSA is an observer. Nine corporations, including Westinghouse, and Lockheed, are participating with focused internal company R&D that will lead to specific intelligence processing applications. Academe is represented by Stanford, the Carnegie Mellon Institute, and Yale.

CLASSIFIED BY: DIA/DG
DECLASSIFY ON: OADR

SECRET

SECRET

(U) Here is our current status:

-- We have established a cadre program development office out of
hide.

-- The program memorandum of agreement is being expanded and
refined.

-- We have started concept development and a cross-program and
technical survey.

-- The initial project management plan is being developed.

(S) For the near-term, we will concentrate on:

-- Establishing the formal program development office in FY 84.

-- Feasibility studies, starting in FY 84.

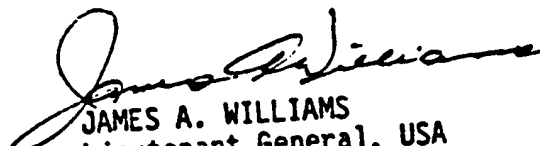

-- Applications for the Soviet 1983 Spring SSBN strategic
exercise.

-- A base-line concept of operation and development plan.

-- A SSBN data base and data base management system to support the
focused analysis effort.

(U) I am comfortable with the direction and progress that we have made.
I am convinced that JNIDS will yield positive and significant results.
[redacted] who has been closely associated with it from the start,
participates with the oversight group and is fully involved in the
program. I look forward to your continued support.

MEMORANDUM FOR THE RECORD

FROM: [redacted] PPS

SUBJECT: Notes from the Technology Steering Panel Meeting with
LTG James A. Williams, Director, DIA, on
4 August 1983

The Technology Steering Panel (TSP) met with LTG James A. Williams, on
4 August 1983. The purpose of the meeting was to solicit LTG Williams's views
on future issues that the Intelligence Community will face (1985-1995 time
period), and the DIA's plans for dealing with these issues. The attachment
presents key points presented by LTG Williams during the meeting. [redacted]

LTG WILLIAMS HAS SEEN

13 SEP 1983

PRESENTATION TO THE TECHNOLOGY STEERING PANEL (TSP)4 August 1983

1. (S) Dr. Waespy, Chairman TSP, led off the introduction, stating the purpose of the meeting, the composition of the Panel and specifically referring to the technological needs of HUMINT in the future, the problem of bulk data processing and the uncertainty of what is required for waging nuclear war in the future.

2. (U) LTG James A. Williams, Director DIA, discussed the following issues with the Technology Steering Panel (TSP):

a. (S) The Director said that his primary concern is intelligence support to Unified and Specified Commanders, corps, wings and fleet commanders.

b. (S) He pointed out that communications systems for support of intelligence operations are extremely poor to the point that we cannot move current data now, with current technologies, with any assurance of desired timeliness.

c. (S) Imagery support to commanders is difficult. While TACIES is needed by both the Army and Marines, there is no available technology to substitute for photo interpreters actually doing the read out. Magazine quality imagery, ELINT from ITEP and tactical COMINT are needed out to 300 km from FLOT on what can affect the commander within 96 hours.

d. (U) in addition, he made the following points:

(1) (S) Data bases are not sustainable in terms of people available.

(2) (C) While prioritization is necessary, this very action will dampen third world collection and affect CENTCOM adversely.

(3) (S) The DIA INCA effort demonstrated that DCA is not being taken into account with regard to communications support for intelligence; communications authorities are not being asked by intelligence authorities to provide the necessary support. The Director cited the fact that there are 19 Signal Battalions in Europe now and that we must move information without further involving masses of people.

(4) (S) In the area of treaty verification, he said he is uncertain as to the Soviet intent in their arms strategy; are they planning for ABMs that can be installed quickly; why are their phased arrays pointed towards Africa? He also referred to CREEK FLUSH operations, stating that the NFIP needs 2/3 of these for contingencies in support of commanders.

(5) (S) He mentioned the lack of support for the TR-1 saying that 35 is the stated need, the AF says 19 is the obtainable number, while the real requirement is not known.

(6) (S) He questioned the value of PARAPSYCHOLOGY, asking whether or not the Soviets could read the contents of safes, yet noting that while the Soviets devote a large amount of assets, the NFIP treats it like a stepchild. He said that AF is expected to exert some help in this area.

(7) (S) Drones should be investigated as worthwhile platforms in support of collection operations.

(8) (S) ADP needs to lean forward and keep an edge on technology rather than reacting to circumstances and events.

(9) (S) Counter intelligence support needs to be brought to bear on technology transfer of high tech data to the Soviet Union. Any substantial curtailment would cut 5 years off their program while 50% curtailment would seriously hurt them. The area needs political attention.

(10) (S) All weather, day night imagery is required.

(11) (S) The Army needs systems to assist in obtaining targets more than 72 km from the FLOT, the present limit.

(12) (C) HUMINT, because it can answer questions that technology cannot, requires rebuilding.

(13) (S) Support to the NCA in a nuclear war should be couched in terms of "did we win or lose", status of resources and condition of the rest of the world at the time.

(14) (S/CCO) He stated that NSA is having difficulty collecting data because of new communications technologies and because the base of interceptable traffic is being reduced. The Director said that more division and lower level COMINT collection and analysis is required as the detail in the analyses at these levels is very valuable in terms of determining warfighting doctrine of our potential enemies.

(15) (S) On the question as to how technology should be handled between the Services and CIA, the Director said it is extremely difficult, but can be done. He then referred to FIST, TACIES, LOCE and other such projects as areas of technological coordination between the Services that are working. He said the influence of the DCI is low in this area. He mentioned his high regard for the D-WIP. He said that R&D must support HUMINT and that search of overt data, use of libraries and close touch with industries is useful in improving R&D for HUMINT.
