**SUMMARY OF OLYMPIC VICTOR
EXPLOITATION ACCOMPLISHMENTS
NOVEMBER 1984–APRIL 1985**

Introduction

1. The Olympic Victor (U-2) Program over Central America, initiated in March 1981, has four primary national intelligence objectives:

- To monitor the military posture of the Sandinista armed forces,
- To identify evidence of Soviet or Cuban military presence or influence in Central America—especially in Nicaragua,
- To identify arms transfers to Nicaragua, and
- To identify activity associated with Salvadoran guerrillas.

This report summarizes the exploitation of 18 Olympic Victor missions flown over Central America from November 1984 through April 1985. Included are exploitation accomplishments, a mission chronology, listings of mission-derived products disseminated by NPIC, two annotated Olympic Victor aircraft photographs in briefing-board format, six flight track maps, and two priority target maps. (S/ [redacted])

Exploitation Accomplishments

2. Intelligence derived from analysis and exploitation of Olympic Victor imagery acquired from November 1984 through April 1985 contributed significantly toward meeting program objectives. Detailed information on exploitation accomplishments has been disseminated in several NPIC products; highlights of these accomplishments are summarized below. (S/ [redacted])

Nicaragua

3. Reaction of the Sandinista military to *contra* activity has been of continuing interest. Deployments of Sandinista armor, artillery, and troops along the Nicaraguan-Honduran border were identified and monitored. In addition, draftee training camps were identified, *contra* camps in Honduras and Nicaragua were monitored, and assessments were made of military logistics activity and of the Nicaraguan government resettlement program. (S/ [redacted])

25X1

4. Deliveries of arms and military equipment to Nicaragua (Figure 1) and the movement of military equipment within the country continued to be monitored. The progress of construction at four major airfields was assessed. Several new facilities, including an armor deployment area, a coastal surveillance radar site, and a crude oil storage facility under construction (Figure 2) were identified. Air defenses in the Managua area were summarized periodically. (S/ [redacted])

25X1

El Salvador

5. In El Salvador, five new guerrilla camps were identified, and assessments of the status of 12 guerrilla concentrations were made for each mission flown over that country. (S/ [redacted])

25X1

25X1

Guatemala

6. Analysis of imagery from the single mission over Guatemala resulted in updated military intelligence and the identification of several new military facilities and construction projects. (S/ [redacted])

Mission Chronology

7. Table 1 lists the date each mission was flown, the mission number, the track flown, and the percentage of clear imagery acquired. Following the table are maps showing each of the six flight tracks (Figures 3-8). (S/ )

25X1

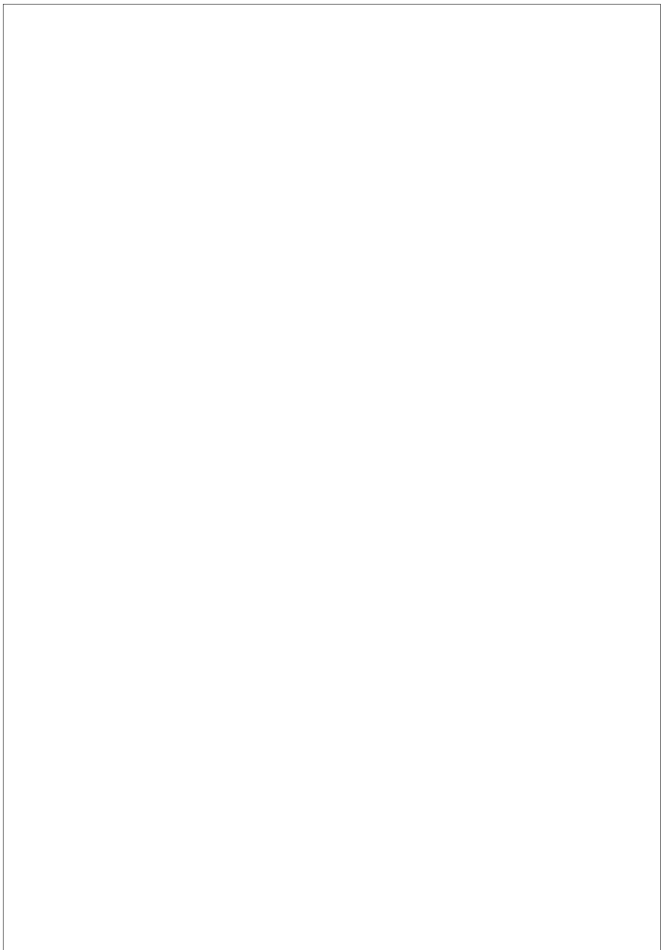

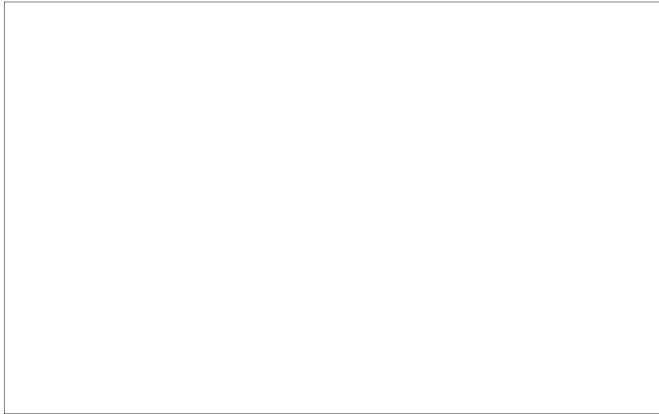

25X1

Priority Targets

8. Thirty-nine facilities in Nicaragua have been identified as high-priority targets. Although adjustments are occasionally made as activity at any given facility changes or as significant new facilities are identified, the list has remained basically constant. Assessments of these facilities, along with all significant activity at other targets, are reported for each mission flown over Nicaragua. Table 2 gives the name and Basic Encyclopedia (BE) number for each facility on the current priority target list, and the accompanying map (Figure 9) shows their locations. Similarly, in El Salvador, 12 guerrilla concentrations have been identified as high-priority targets. Table 3 lists the concentrations and their BE numbers, and the accompanying map (Figure 10) shows their locations. (S/ )
