"Intramedullar Epidermoid Tumor."

Budapest, Ideggyogyaszati Szemle, Vol XIX, No 8, Aug 66, pages 249-252.

Abstract: The case of a 61 year old man with an intramedullar epidermoid tumor is reported together with a brief literature survey of the subject. The anamnesis did not contain any data which may have pointed to the possibility of exogenous implantation. The intramedullar localization would also contradict an exogenous origin. In spite of the advanced age of the patient and the slow course of the disease, it must be classified as congenital, which lends added interest to the case. All 9 references are Western.

TITLE: Comparative characteristics of diagrams of hydrofoil vessels

SOURCE: Sudostroyeniye, no. 1, 1966, 9-11

TOPIC TAGS: ship design, hydrofoil

ABSTRACT: The article deals with the design of hydrofoil vessels whose hydrofoil diagram as a rule are based on the experimental results of model vessels and on individual hydrofoil vessels. Stabilization and rigidity coefficients serving as comparative characteristics of hydrofoil units are presented by the author in graphs for the stabilization coefficient as a function of immersion, the rigidity coefficient as a function of immersion, and the effect of immersion and angle of attack on the rigidity coefficient of a plane foil. TITLE: Mean Sq-fields according to data for September 1958

SOURCE: AN SSSR. Mezhdunyedomstvennyy geofizicheskiy komitet. III razdel programmy MGG (Geomagnetizm i zemnyye toki). Sbornik statey, no. 8, 1966, Geomagnitnyye issledovaniya (Geomagnetic research), 31-51

TOPIC TAGS: geomagnetic field, algorithm, spheric harmonic, geomagnetic coordinate, geographic coordinate, electroconductivity

ABSTRACT: The nature of the geomagnetic Sq-variations is unknown. Previous investigations made by the same authors are continued here using the same methods as before. A comparison was made between various groupings of stations and the systems of coordinates used for studying the magnetic variations during a quiet sun. The algorithm B used in earlier publications was insufficient for the solution of the problem of Sq-variations. The algorithm A was introduced which is analogous to that of Gauss and Shuster. The Sq-field was assumed to be equal to the magnetic field potential, and its components were

Card 1/2

ACC NR: AT6034609

expressed by sums of spherical harmonics from which the coefficients of expansion were determined. Computations of coefficients were made from various combinations of stations according to longitudinal zones and global distribution. Numerical values were given in tables. Analysis of variations of the amplitude c_1 of the computed first harmonic of the S_q -field and those of the observed field showed that errors obtained using geographic and geomagnetic coordinates differed very little. Approximate values of S_q -variations obtained using spherical functions expressed by geomagnetic coordinates of southern and low-latitude stations were nearer the observed values. The same effect was obtained for stations of northern middle latitudes using spherical functions expressed by geographical coordinates. A combination of stations by longitudinal zones yields better agreement between computed and observed values of S_q -variations. Different S_q -field values in longitudinal zones indicate that the electrical conductivity of zones is different. Maps of current whirls are given for both hemispheres. Orig. art. has: 10 figures, 10 tables, and 11 formulas.

CONTENTS: General description of the system; computer programming; and its present state.

TRANSLATION: The authors submit a procedure for determining crater observations of processes in the upper layers of the atmosphere by means of a computer. The input is a series of data on the parameters of the atmosphere at different heights. The output is a series of data on the atmospheric parameters at different heights. The system consists of an input program to the computer, a program for processing the data, and a block diagram of a system for processing the data. The signals are converted into digital form and then converted into binary code. The data is recorded on a MAG magnetic recorder. Signals from the computer are converted into binary code and recorded on a card. Card 1y2

AUTHORS: Afraymovich, E. L.; Yegorov, Yu. A. 38
TITLE: A device for mass input into a digital computer of coordinates of experimental curves, chosen for plots with a high error level G
SOURCE: Geomagnetism i aeronomiya, v. 5, no. 4, 1965, 784-786
TOPIC TAGS: information storage, information retrieval, digital recording system, computer, ion distribution
ABSTRACT: A description is given for a means of introducing ionogram representations into a digital computing machine. The method circumvents the time-consuming task of introducing such data manually and also avoids the complexity and limitation inherent in some earlier automated methods. The proposed device consists of an optical system for projecting an image at a selected scale onto a screen equipped with a push-button control for changing photo frames. The device also features a photomechanical coding system with simple electrical circuitry. The screen is such that each point on its surface is identified in a coordinate system by means of two binary numbers. The points along an arbitrary curve within the reference system may be digitized by means of moving an indicator arrow
Card 1/2

L 2370-66

ACCESSION NR: AP5021010

along the locus of the curve. The arrow is constrained to move in the plane of the screen; the coordinates of the tip of the arrow are stored in a core memory unit whenever a contact switch is closed. The amount of digitization is at the discretion of the operator, and the interpretation of multivalued curves is also left to the judgment of the operator, thus conserving storage and removing the work of qualitative decision from the computer operation. A discussion of the comparative worth of the proposed system is given. Some areas of application mentioned are: analysis of experimental curve plots, oscillograms, particle streams, topographic charts, isoline charts, etc. The use of an intermediate information buffer would allow expansion of the device's capacity. The authors thank M. P. Rudin for his constant attention to the work. Orig. art. has: 1 figure.

TITLE: Device for automatic multichannel recording and input into a universal digital computer of experimental data from the study of the ionosphere

SOURCE: AN SSSR. Sibirskoye otdaleniye. Sibirskiy institut zemnogo magnetizma, ionosfery i rasprostraneniya radiovoln. Issledovaniya po geomagnetizmu i aeronomii (Studies in geomagnetism and aeronomy). Moscow, Izd-vo Nauka, 1966, 63-68

TOPIC TAGS: Ionospheric physics, data processing equipment, data recording, digital computer, auto recorder, magnetic recorder /Dnepr-11 magnetic recorder

ABSTRACT: A fully automatic device is described that will record and put into a "Minsk" universal digital computer the output data of a metering system used to investigate the structural inhomogeneities of the ionosphere. The device consists essentially of a recording unit, an input unit, and an information storage based on a mass-produced "Dnepr-11" magnetic recorder. The device makes it possible to calculate automatically the mean value of the amplitudes of two components or two reflected signals. The recording unit is easy to tune and

Card 1/2

ACC NR: AT6027213

permits recording of signals at an access frequency of 100 cps. The block diagram of the device is presented, together with a specification of the type of tubes, resistors, and capacitors employed. In conclusion, the author thanks M. P. Rudin for constant attention to the work, and I. A. Zelenkov for thoroughly assembling the device. Orig. art. has: 1 table and 2 figures.

TITLE: Method for determining distortion of objectives on photographic benches. Class 42, No. 189177 [announced by Central Scientific Research Institute of Geodesy, Aerial Photography and Cartography (Tsentral'nyy nauchno-issledovatel'skiy institut geodezii, aerofotos'yemki i kartografii)]

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 23, 1966, 81

TOPIC TAGS: photographic lens, lens distortion, photographic film, photographic plate, photographic printing

ABSTRACT: This Author Certificate presents a method for determining distortion of objectives on photographic benches, which involves printing the direction of nondistortion on the photographic plate. To measure the tangential component of the distortion, two marks are printed on the photographic plate from the backing side with the help of two projectors placed in the plane containing the sighting axes of the collimators. A line drawn through these marks and coinciding with the line of intersection (or parallel to it) of the plane of the photographic plate with the plane containing the sighting axes of the collimators is taken as the initial reference line for measuring the tangential displacements.

TOPIC TAGS: aerial camera, simulation test, test construction, photographic film, photographic emulsion

ABSTRACT: Tests must be carried out under the same conditions under which the object being tested will be used in practice. This basic metrological principle must also be applied in laboratory determination of the elements of internal orientation and adjustment of the aerial camera. Hence the photographic method of calibration in the horizontal position of the plane of an applied frame most closely corresponds to the practical use of the aerial camera. The emulsion on which the calibration marks are made must match the aerial film in spectral sensitivity; the light used in calibration must also be a spectral match. Therefore the photographic stand described has a plane system of collimators, the applied aerial camera frame is horizontal in position, and the photographic method is used in determining the elements of internal

ABSTRACT: This Author's Certificate introduces: 1. A precision stereo comparator for measuring the coordinates of associated points on aerial photographs (positive transparencies). The device contains a stationary binocular optical system, two coordinate gauges, each consisting of a lower carriage and an upper carriage which moves along guides in the lower carriage, and automatic readout units based on calibrated pairs of diffraction gratings. Measurement accuracy is improved by making the signals from the readout unit independent of rotation of the transparent gratings with respect to the reflecting ruled gratings. All reflecting gratings in the instrument are situated in

SOV/20-121-5-18/50

TITLE: The Influence of Irradiation on the Activity of Some Ferments
Localized in the Structures of the Lamellar Bodies of the
Mesentery of Cats (Vliyaniye oblucheniya na aktivnost'
nekotorykh fermentov, lokalizovannykh v strukturakh plastin-
chatykh telets bryzheyki koshek)

PERIODICAL: Doklady Akademii nauk SSSR, 1958, Vol 121, Nr 5,
pp 834 - 836 (USSR)

ABSTRACT: In order to investigate the earliest variations of the
receptors (retseptor), the author locally irradiated
the lamellar bodies of the mesentery of cats. The lamellar
bodies belong to the type of the sensitive nerve ends.
From a physiological point of view, they are baroreceptors.
The investigations discussed in this paper were carried
out on total mesentery preparations. Hungry animals were
used for these experiments. A part of the intestine
was extracted from the abdominal cavity and irradiated
by soft X-rays. The non-irradiated parts of the mesentery

Card 1/3

The Influence of Irradiation on the Activity of Some SOV/2o-121-5-18/50
Ferments Localized in the Structures of the Lamellar Bodies of the
Mesentery of Cats

were used for control measurements. In order to obtain results immediately after irradiation, the author carried out a series of biopsies (biopsy). The most intensive activity of the basic phosphatasis was found in the internal bulb of the receptor. It is less intensive in the shells of the fiber, in the axial cylinder, and in the external capsule. According to these and other results of this investigation, the lamellar bodies do not contain choline esterasis (kholinesteraza). A pseudo-esterasis is found only in the simplast of the internal bulb of the receptor. The activity of all the investigated ferments was changed by irradiation. This activity was intensified in the internal bulb and also in the shells of the nerve fibers. According to the investigation of preparations with acid phosphatasis, the intensity of the reaction is less intensive in irradiated receptors than in non-irradiated ones. The activity of the choline esterasis in the irradiated receptors varies in the same way as the activity of the basic phosphatasis. According to the

Card 2/3

The Influence of Irradiation on the Activity of Some SOV/2o-121-5-18/50
Ferments Localized in the Structures of the Lamellar Bodies of the
Mesentery of Cats

results of this paper, the X-rays (of the doses applied by the author) distinctly change the activity of the ferments in the lamellar bodies of the mesentery of cats. Nevertheless, the localization of the ferments is not changed. The variations of the ferment activity in the irradiated receptors indicate a variation of its chemism. However, the available results are not sufficient for a determination of its chemism. At the moment of irradiation, the electrons have an exciting influence upon the receptors. There are 2 figures and 8 references, 4 of which are Soviet.

TITLE: Study of early structural changes of irradiated intraauricular septum
in frogs (in vivo) and histochemical observations

PERIODICALS: Radiobiologiya, v. 3, no. 2, 1963, 300-310

TEXT: The question regarding early changes in many tissue systems, particularly nerve tissues, and the effect of disruption of blood circulation in the genesis of these changes during the action of ionizing radiation on living objects up to the present time did not find satisfactory solution. In the recent decade a number of investigations occurred in which there exist indirect proofs of the possible damage of nervous structures independent of vascular disruptions. In this respect it was of interest to study the reaction of nerve elements in model experiments. An interesting model for realization of such experiments was the preparation made of intraauricular septum of beating frog heart, prepared by Gramenitskiy method. This preparation permits one to conduct prolonged observations of the state of various tissue systems and particularly living nerve cells located along the vagosympathetic trunk in the absence of active blood circulation. The most significant was the discovery of changes in many structures which show the disruption of permeability of cell

Card 1/2

Study of early

S/205/63/003/002/023/024

O

membranes and membranes of mitochondria. Under experimental conditions these phenomena occurred in the process of irradiation or shortly after it and their significance for the development of subsequent changes in the state of cell structures is insurmountable. The article contains 4 figures and a 27-item bibliography.

TITLE: BN-350 nuclear power plant

SOURCE: Obninsk. Fiziko-energeticheskiy institut. Doklady, 1965.
Atomnaya stantsiya BN-350, 1-30

TOPIC TAGS: nuclear power plant, liquid metal cooled reactor, fast reactor, nuclear reactor technology, desalination

ABSTRACT: After a brief discussion of the advantages of using fast neutron reactors for power production, a new 350 Mw fast neutron sodium cooled reactor of BN-350 type is described. At present, a power plant equipped with such reactors and P-50 back pressure steam turbines is under construction in the Mangyshlak peninsula area at the northeastern coast of the Caspian Sea. The dual-purpose plant will generate 150 Mw of electric power and produce 1200 ton/hr of

Card 1/4

890/0419

L 5171-66

ACCESSION NR: AT5022451

steam. The steam will be used by a desalting plant designed to supply 120,000 cu m of fresh water per day. It is expected that the power plant will be put into operation in 1968 or 1969. The primary and the secondary intermediate loops of the reactor will be cooled by liquid sodium.¹ The third loop will be of steam-water type. The reactor core carries 211 hexagonal fuel assemblies each containing 169 uranium-dioxide elements. At the beginning, a compound of uranium-dioxide and plutonium will be used in fuel elements. There are 120 inner and 320 outer assemblies placed in concrete shields. The selected essential data on BN-360 reactor are as follows:

Thermal power	1000 Mw
Core Volume	1.87 cu m
Core diameter	1.495 m
Core height	1.06 m
Vessel diameter	6 m
Vessel height	2.8 m
Coolant temperature (inlet)	300 C
Coolant temperature (outlet)	500 C

Card 8/4

L 5171-66

ACCESSION NR: AT5022451

Many other details and data are given on reactor core and concrete shielding as well as on the reactor tank made of X18Ni9 stainless steel. A special chapter is devoted to the discussions of various control systems including power control, measurements, automatic regulation, reactivity compensation, and emergency protection. The replacement and handling of fuel elements is also discussed. The radiation shielding is briefly described. Some information is given on the selection of materials as well as on the experimental investigation of various control and safety systems. An extensive analysis of heat transfer system is also presented dealing with primary and secondary loops, heat exchanger, pumps, piping, emergency heat removal, steam generators and other equipment. In conclusion, some further possible improvements in the design and operation of fast neutron reactors are outlined including a more efficient burn-up of

Title : The Laws Governing the Ecologic-Geographical Spread of Bac.
mycoides and Bac. mesentericus in the Light of Data as to
Interspecies Antagonism.

Orig Pub: Tr. In-ta Mikrobiologiy, 1954, No 3, 144-153

Abstract: Of 117 soil samples from Armenia, Georgia and Azerbaijan,
more than 2,500 strains of B. mycoides and B. mesentericus
were isolated. In these, manifestations were studied of re-
ciprocal antagonisms and antagonism in relation to other
microbial groups (to streptococci, intestinal bacteria, myco-
coccus, monilia). Bacillus mycoides is devoid of antibacterial
properties; on the other hand, all bacteria of the subtilis-
mesentericus group inhibited the growth of B. mycoides on nu-
trient media, also on sterile and unsterile soils. The anta-

gonistic action of *B. mesentericus* is more pronounced when more vegetative forms and fewer spores of the given species are found in the soil. The *subtilis-mesentericus* group of bacteria was located by the author in the brown soils of lowland districts, while *B. mycoides* were in hilly soils containing much organic matter. The antagonism of *B. mycoides* and bacteria of the *subtilis-mesentericus* group, in the author's opinion, is one of the factors which determines the ecologic-geographic distribution of these bacteria in the soil.

Title : The Antagonistic Action of Soil Micro-
organisms on Cultures of Bacterium Radicicola

Orig Pub : Izb. AN ArmSSR. Biol. i s.-kh. n., 1958, 11,
No 2, 37-46

Abstract : Various degrees of antagonistic action of
actinomycetes, sporogenous and non-sporogenous
bacteria with respect to B. radicicola (BR)
were established. It was shown that the
strongest antagonists to BR are found among
the bacilli of the group Bac. subtilis-mesen-
tericus and Bac. circulans-polymyxa, and among

TITLE: Use of Antibiotics in Plant Cultivation (Primeneniye antibiotikov v rasteniyevodstve).

PERIODICAL: Vestnik Akademii nauk SSSR, 1959, Nr. 1, pp 142-143 (USSR)

ABSTRACT: A conference dealing with this subject took place in Yerevan from 8 to 13 October, 1958; it had been called by the Institut mikrobiologii Akademii nauk SSSR (Microbiological Institute of the Academy of Sciences USSR), the Vsescouznyy institut sel'skokhozyaystvennoy mikrobiologii VASKhNIL (All-Union Institute for Agricultural Microbiology of the VASKhNIL) and the Sektor mikrobiologii Akademii nauk Armyanskoy SSR (Department for Microbiology of the Academy of Sciences of the Armyanskaya SSR). Scientists who investigate antibiotic substances and their application to various fields of economy participated in the conference. It was the aim of the conference to systematize the collected material and to work out an effective method of application of antibiotics to plant cultivation. V. A. Ambartsumyan, President of the AS Armyanskaya SSR opened the conference. N. A. Krasil'nikov spoke about

Use of Antibiotics in Plant Cultivation

spoke about the successful utilization of several bacteria against diseases of vegetable cultures and potato wilt. Yu. M. Veznyakovskaya, O. G. Shirokov, A. D. Nalbandyan dealt with the utilization of epiphyte microflora in fighting several fungus diseases in plants.

D. M. Trakhtenberg, E. I. Rodionovskaya, L. P. Starygina, U. G. Oksent'yan mentioned results obtained in investigation of phytobacteriomycene as well as its utilization in fighting diseases occurring in cotton bushes and beans.

R. M. Galach'yan, Ye. P. Protsenko, A. G. Kuchayeva, B. A. Chelyshkina tried the effect of antibiotic preparations as tomato seed steeps against bacterial cankers in fighting diseases of decorative plants.

Ye. Ya. Rashba, K. I. Bel'tyukova described the investigation of plant antibiotics.

Z. E. Bekker, A. B. Silayev spoke about the production of the preparations "grizeoful'vin" and "trikhotosin" and their effect on fungus carriers of diseases in cabbage, wheat and water melons.

A. G. Kuchayeva reported on results achieved in the utilization of antibiotics against unpaired silk moths.
